The Western Union Telegraph Company has declared a quarterly dividend of 1¼ per cent., payable October 15.

The Chicago, Milwaukee & St. Paul Railway Company has declared a semi-annual dividend of 3½ per cent. on its preferred stock and 2 per cent. on its common stock, payable October 21.

The P. Lorillard Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable October 1.

The Chicago Junction & Union Stock Yards Company has declared a quarterly dividend of 1½ per cent. on its preferred stock, payable October 1.

The Edison Electric Illuminating Company of Brooklyn has declared a quarterly dividend of 1½ per cent., payable October 15.

Railroads.

The following railroads report gross and net earnings for July:

	—*Gross earnings*—		—*Net earnings*—	
	1896.	1895.	1896.	1895.
Allegheny Valley	204,848	222,502	84,724	98,550
Atchison	2,152,541	2,069,406	513,89	195,003
Buff., Roch. & Pitts	313,327	291,719	120,171	105,730
Buffalo & Susq	41,572	36,211	19,303	11,874
Canadian Pacific	1,803,574	1,543,544	699,234	558,026
Central of New Jersey	1,199,356	1,127,831	509,355	466,495
Chesapeake & Ohio	840,553	809,451	291,530	299,303
Chic., Bur. & Quincy	2,753,351	2,6 1,766	973,323	802,594
Chic., Mil. & St. Paul	2,546,226	2,289,240	820,862	736,993
Cleve., Can. & South'n	66,264	68,620	13,409	17,761
Cleve., Cin., C. & St. L.	1,008,154	1,162,133	247,813	240,207
Denver & Rio Grande	622,436	643,589	259,286	294,445

	1896.	1895.	*Per ct.*
Total gross earnings	$38,850,641	$38,444,737	Inc 1.0
Total net earnings	12,385,694	11,823,788	Inc. 4.7

The all-rail east-bound shipments of dead freight from Chicago last week were 61,995 tons, against 63,179 tons the previous week and 57,232 tons the corresponding week of the previous year.

An Augusta, Ga., dispatch says: "Judge Emory Spear has issued a mandatory order compelling the Southern States Freight Association and Seaboard Air Line to restore the rates recently cut. This stops the pending rate war and leaves the matter where it was when held up by Judge Simonton's injunction. The order recites that the violation of the third clause of the Interstate Commerce law, which prohibits discrimination in favor of one locality against another, and the great damage being done by reason of the discrimination in favor of Atlanta against the balance of the state, are directly contrary to the law."

Albany & Susquehanna Railroad Company reports for the year ending June 30:

	1896.	1895.	*Changes.*
Gross earnings	$4,212,763	$3,872,787	Inc. $339,976
Operating expenses	2,422,099	2,281,469	Inc. 140,630
Net earnings	$1,790,664	$1,591,318	Inc. $199,346
Charges	1,085,649	1,084,961	Inc. 688
Surplus	$705,015	$506,357	Inc. $198,658

Rensselaer & Saratoga Railroad Company reports for the year ended June 30:

	1896.	1895.	*Changes.*
Gross earnings	$2,342,062	$2,263,930	Inc. $78,066
Operating expenses	1,558,394	1,550,997	Inc. 7,397
Net earnings	$783,608	$712,939	Inc. $70,669
Other income	9,545	9,545	----
Total income	$793,153	$722,484	Inc. $70,669
Charges	1,140,710	1,128,873	Inc. 11,837
Deficit	$347,557	$406,389	Dec. 58,832

The New York & Canada Railroad Company reports for the year ended June 30:

	1806.	1895.	*Changes.*
Gross earnings	$915,966	$847,748	Inc. $68,218
Operating expenses	641,354	662,303	Dec. 20,949
Net earnings	$274,612	$185,445	Inc. $89,167
Fixed charges	273,132	209,402	Inc. 3,730
Surplus	$1,480	*$83,957	Inc. $85,437

* Deficit.

The report of the Iowa Central Railroad for year ending June 30, 1896, compares:

	1896.	1895.	1894.
Gross	$1,854,043	$1,583,971	$1,811,567
Net	694,591	535,150	552,307
Charges	436,049	440,312	420,623
Surplus	258,541	94,838	146,161

The Chicago Great Western reports for the fiscal year ending June 30 as follows:

	1896.	1895.	*Changes.*
Gross earnings	$4,709,820	$3,636,098	Inc. $1,073,722
Operating expenses	3,310,242	2,816,748	Inc. 493,494
Net earnings	$1,399,578	$819,350	Inc. $580,228

The earning from freight increase $963,902, or 37 37 per cent.; from passengers $134,994, or 16 13 per cent., and from the mail service $12,693, or 14 32 per cent.

Miscellaneous.

The area of Venezuela is about 620,000 square miles, which is "nearly equal to the combined areas of Germany, France and Spain. This is about equal to the area of all that portion of the United States lying east of the Mississippi and north of the Ohio rivers, with the addition of the two Virginias, Kentucky and North Carolina. Venezuela would make two states the size of Texas, with 70,000 square miles to spare. The population of Venezuela, according to the census of 1891, was 2,323,527—a little more than the population of Massachusetts at that time. Venezuela has, in addition, a native Indian population of about 326,000."

The Baltimore *Sun* estimates "that the population of Kansas is fully 100,000 less now than it was when the census of 1890 was taken, and the exodus continues."

Foreign.

The Egyptian cotton crop promises to be the largest ever known, estimated at 6,000,000 cantars (570,000,000 pounds).

The *Northeastern Lumberman* says: "Political economists in Europe claim that growing timber and gold are the only articles which have not declined very greatly in value during the last decade. The yearly value of the timber consumed in Europe is estimated at $951,250,000."

The London *Times* says: "The steamer Teneriffe, at Liverpool, from West Africa, included the American missionary, Dr. Snyder, who has been four years in the Congo territory, during which he penetrated over 1,000 miles into the interior, and claims to have discovered a new lake, which must be of great width, since the opposite bank could not be seen with the naked eye. Dr. Snyder also visited Matadi, on the Lower Congo, and Luabo, in the Upper Congo district, which is a great center, with several thousand inhabitants. "Several tribes who had combined against the Belgians came down and practically took possession of the place," and Dr. Snyder "had to barricade his house and remain in it for several days."

The British Board of Trade returns for August show that imports decreased £2,110,000 and exports decreased £180,000 as compared with those for August in 1895.

The Canadian Department of Marine has received information that the fishing season along the north shore of the St. Lawrence has been almost a total failure. "This will entail unprecedented distress among the fishing population."

The Japanese authorities have given official notification of the creation of a silk market in Kobè. The export of that product "has hitherto been monopolized by Yokohama."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Debt—Note—Loan—Usury.

In the recent case of Becker's Investment Agency vs. Rea, as Receiver, the Supreme Court of Minnesota held that where, for a debt actually due him, one party held the note of a debtor, which he discounted, indorsed and delivered to a third party at a rate of discount greater than the rate of interest allowed by law, the transaction was not necessarily a loan in which the note was delivered as collateral security; but that whether or not it was such a loan was a question of fact to be determined from all the facts and circumstances in the case, and that the transfer of the note might be a valid sale thereof, but whether or not a question of law, the obligation of the indorser was usurious or not enforceable by the indorser, was not decided.

Mechanic's Lien—Filing.

In the case of Schieble vs. Schickler et al., recently decided by the Supreme Court of Minnesota, it appeared that the plaintiff made a contract to furnish and place in defendants' houses furnaces of a certain kind, number and size, together with the proper connections therefor. He fully performed this contract except that the furnaces did not heat the houses so as to fulfill a warranty made as a part of the contract. He subsequently made a new agreement whereby in satisfaction of all damages for breach of the warranty he agreed to substitute other furnaces in place of those already furnished, and this he did. He filed no lien statement until within ninety days thereafter. In an action to foreclose a mechanic's lien for the contract price, the court held that such lien was filed in time.

Taxation—Exemption—Manufacturing.

In the case of The Chickasaw Cooperage Company vs. Police Jury, Parish of Jefferson et al., recently decided by the Supreme Court of Louisiana, it appeared that the staves, heads and iron hoops for barrels were manufactured in another state and shipped to plaintiff company, in New Orleans. There the component parts of the barrel were put together, and to it was given proper shape and finish. The hoops were flared or splayed, so as to fit the bilge of the barrel. Under the authority of Cooperage Company vs. City et al., 47 An., 1314, the points being similar, the court held that the barrels were not manufactured in Louisiana, and, in consequence, plaintiff's cooperage company was not exempt from taxation under the law exempting the capital, machinery and the property employed in the manufacture of furniture and other articles of wood.

Notes—Security—Pledge—Account.

In the case of Vance vs. First National Bank of Shreveport, recently decided by the Supreme Court of Louisiana, it appeared that the notes of which plaintiff was the maker were transferred as collateral security after their maturity. Afterward they were returned to the possession of the pledgor, who repledged them as security for his indebtedness. The court held that the pledgee, while not protected by laws applying to paper transferred prior to maturity, was the owner of the rights held by the pledgor, and that account stated transferred to a third person could not be admitted away at the pleasure of the creditor by whom transferred, particularly as the interest was cast, both parties accepted the rate, and accounts had become stated, notes and mortgages executed covering the rate. The debtor's interest in the property mortgaged was held to be not at all evident, his creditors being the real parties in interest.

Consignment—Order—Express Company.

The Supreme Court of Georgia held, in the recent case of The Southern Express Company vs. Williams, that a written order, dated at a place where an express company had an office, addressed to an agent of the company at its office where consignments to the writer were to be transferred to a railroad company, and directing that agent to "deliver any and all express matter (moneys included) addressed to (the writer) to the conductor of" that railroad "until further notice," and concluding with the words "this my standing order," until revoked authorized deliveries of such matter to be made, not only to the person who happened to be conductor at the time the order was signed, but to any other person occupying that position and acting in that capacity. The court held that where goods are received by an express company under a contract for their delivery to a named consignee at a point beyond its terminal office, and the company, at that office, delivers such goods to an agent of that consignee duly authorized to receive them, such delivery completes the contract of carriage, and that this is true although the goods were not ordered by the consignee to whom the shipper really intended to send them, but by another person bearing, or pretending to bear, the same name, to whom the goods were finally delivered after passing through the hands of the real consignee's agent.

Corporation—Stockholders—Action.

The Supreme Court of Minnesota held, in the recent case of Pioneer Fuel Company et al. vs. St. Peter Street Improvement Company et al., that where two separate and independent actions were brought by judgment creditors against an insolvent corporation and some of its stockholders under chapter 76, General Statutes 1894, and thereafter the court made an order consolidating the two actions under the name and title of both plaintiffs "against the defendants named therein," and six days before the making of this order two stockholders who were made defendants in one action (but not in the other) demurred to the complaint therein, which demurrer was brought on for hearing after the order of consolidation, such order consolidated both complaints, so that the allegations contained in one aided the other, and the case stood as if the complaint demurred to had been amended after the demurrer was served and before it was argued. The court in considering the status of a creditor other than the plaintiff, coming in and filing his claim under the order of the court, and what he may plead without leave of court, further held that he might plead additional matters by filing a cross bill, with leave of court; and it appearing that a defendant who was a former stockholder transferred his stock before any time at which it appeared that any indebtedness had been incurred by the corporation or it had become insolvent, but it was alleged in the complaint, among other things, that the transfer was made for the purpose of avoiding the stockholder's liability, was not bona fide, that no consideration was paid therefor, and that he was still the beneficial owner and holder of the stock, the court held, on demurrer, that the complaint alleged a cause of action against him.

Taxation—Exemption—Bridge.

The Kentucky Court of Appeals held, in the recent case of Henderson Bridge Company vs. City of Henderson, that a city or town may by statute be constituted a taxing district with power, as such, to impose a railroad or school tax upon property therein without judicial inquiry as to individuals; that the city of Henderson having been constituted such taxing district for both railroad and school purposes, the entire bridge property of appellant within its boundary, extending to low-water mark on the Indiana shore, was subject to taxation by the city to pay interest on railroad and school bonds; that the right to collect taxes was based upon yearly assessments, each of which in its turn might be called in question; that therefore in a suit to collect taxes for one year the defense that the assessment was unjust and excessive could not be treated as res judicata because of a decision in a court to collect taxes for former years, and that as defendants had an opportunity to apply for correction of the assessment by the proper tribunal, of which they neglected to avail themselves, they could not now complain even if the assessments were excessive, which did not satisfactorily appear. The court further held that even if the rule which exempts from taxation for ordinary municipal purposes agricultural lands included within the boundary of a city against the will of the owner, where they receive but little if any benefit from the city government, could be applied to a bridge, that rule did not operate to exempt defendant's bridge property from such taxation, since it not only derived benefit and protection from the municipal government, but enjoyed peculiar advantages and privileges by reason of its relative position not possessed by others who shared with it the local burdens; that therefore the entire bridge within the boundary of the city to low-water mark on the Indiana shore is subject to taxation for ordinary city purposes; that the legislature of Kentucky had power to authorize the city of Henderson to tax the bridge notwithstanding the fact that by the compact with Virginia navigation of the Ohio river was made free and common to the citizens of the United States, and that the fact that the Henderson Bridge Company accepted its charter and expended money in constructing its bridge upon the faith that under previous decisions of the court the portion of the structure north of low-water mark on the southern shore would not be subject to municipal taxation did not give it a contract right to exemption therefrom.

BUSINESS NOTES.

Canadian Millers and Tariff Revision.

The Dominion Millers' Association, in annual meeting at Toronto, has passed a resolution "expressing strong opposition to any change in the tariff on wheat and flour, and also to reciprocity with the United States in wheat and flour, holding that such reciprocity would result in great loss and injury to farmers and millers of Canada. A strong deputation of members of the association will go to Ottawa to express their views to the government."

Savannah's Trade Increase.

The Savannah *News* has printed a review of the business of Savannah during the year ended August 31. "Carefully prepared figures show the value of trade during the year to have been $128,400,000, an increase of $8,000,000 over a year ago. While there was a falling off in cotton receipts, the higher prices of the staple added $6,000,000 to its value. The naval stores trade shows a largely increased volume, but the low prices depreciated the total.

Millers' Combination Broken.

A press dispatch from Milwaukee says: "The big millers' trust, known as the spring wheat millers' combine of the northwest," has dissolved. "It went out of existence as noiselessly as it came into the world. The combine, which was only for the purpose of regulating the prices of flour, failed of its object because of the large millers' cut prices," being willing to pay the fine imposed by the combine for selling under the scale every time there was a good-sized order in sight. "A meeting of the trust was held recently, the books were closed and the fund divided among those members in good standing. The millers pledged themselves never again to enter into a combine to maintain prices."

Gulf Port Grain Exports.

A Chicago press dispatch says: "So enormous has been the movement of grain for export to Galveston that both the Santa Fé and the Missouri, Kansas & Texas railroads had to issue notice that they are temporarily unable to take any more export freight to that port. The elevators at that port are said to be chock full, and not enough vessels enter there to relieve the blockade. New Orleans, which has better elevator facilities and better ocean service, is getting the benefit of Galveston's temporary embarrassment. Notwithstanding the low rates made on export grain by the Missouri River-Chicago lines but little of the business is coming this way, because the eastern lines persist in maintaining their prohibitory rates."

Canadian Relations with the States.

In an interview with a Chicago newspaper correspondent, recently, "Mr. Laurier said that he favored the joint use of the Canadian and American fisheries by fishermen of both countries and the joint control of the Canadian canals by a commission appointed by the United States and Canada. 'Let us,' he said, 'have a thorough understanding and better relations all round. Canadians of every political stripe watch with profound satisfaction the growth of feelings of good will and affection between Canada and the United States. The Liberal party in Canada will do what it can to aid in getting rid of old prejudices and to bring together two sections of the Anglo-Saxon family for their own good and the good of mankind.'"

South African Demand for Lumber.

A correspondent of the *Canadian Lumberman*, writing from Cape Town, South Africa, "states that the total imports of rough and dressed lumber into that colony during 1895 amounted to a valuation of $1,475,369, of which pine amounted to a valuation of $721,258; staves, $48,322, and hardwoods, grown in Canada, $28,625. Large quantities also went to the Transvaal Republic, the Orange Free State and Natal. The correspondent referred to thinks that the imports of lumber into South Africa are to greatly increase, and that Canadian producers should bestir themselves in order to secure a larger slice of it. Lumber from the eastern as well as western coast of the United States went to the South African colonies in large quantities last year."

Exports of Alabama Iron.

The *Engineering and Mining Journal* says: "Alabama iron is to be pressed upon the English market, according to our contemporary, the London *Iron and Coal Trades Review*, which states that pig iron from the Birmingham district has been offered in several cases, the price named by agents being 6d. below that of English pig of equal grade. It is also stated by the same authority that offers have been made to deliver large quantities at 38s. per ton on dock at Liverpool. The grade of the iron in this latter case is not stated. The price, however, is about the current quotation for Cleveland pig, and 8s. below that for Scotch iron. With iron selling at from $6.25 to $7 per ton at Birmingham, it could be put down in Liverpool at the price named, but the profit to the furnaceman at such quotations must be so small that there would be little inducement to extend his trade."

British Trade with Austria.

The British consul-general at Vienna "reports that last year the import trade of Austria-Hungary was the largest on record—namely, £60,619,830. The exports, £61,873,411, showed a considerable decline owing to the growth of the domestic demand, and also to the prevalence of swine disease, which kept Austro-Hungarian live stock out of Germany. The British share of this trade was only £5,961,180 for imports and £5,780,743 for exports. Cotton yarn makes by far the most part of the former, woolen goods, machinery and leather goods coming next, while nearly half the value of the exports to this country is under the head of sugar. With India there is a considerable import trade, but the returns include imports designed for other parts of the continent, but entering through Trieste. The total value of imports from Great Britain and her colonies was £9,890,633 and the exports £6,668,297."

The Government and Good Roads.

One of the most interesting of the many bulletins which the State Department of Agriculture has issued in the past year is that on "Good Roads," recently prepared by Professor John Hamilton, deputy secretary of the department. The admirable feature of Professor Hamilton's work is its lucidity. It is a clear, concise and practical treatise upon one of the greatest needs of the state of Pennsylvania. "He discusses his subject from the standpoint of an expert, and embraces in limited space a great fund of information and suggestion of vital interest to the agriculturist, who is to-day the greatest pecuniary sufferer by reason of a lack of good roads. It is by means of such works as this of Professor Hamilton that the attention of the farmers will be held to the subject, with the ultimate result of giving to this state a system of township and county highways unequaled by that of any other commonwealth in the Union."

England's German Imports.

The Philadelphia *Press* says: "There is considerable stir in commercial circles in England over the large increase in imports from Germany. In 1883 the imports into England of goods manufactured in Germany were valued at $83,150,000; in 1893 the value of these German imports was $128,150,000, an increase of about 30 per cent. in ten years. Both are gold-standard countries, but Germany has a protective tariff, while Great Britain has not. Germany's foreign trade has been growing rapidly of recent years, while that of England has fallen off. A parliamentary return shows that in 1872 the per capita of exported English products was $40.24, while in 1894 it was only $27.70. But in Germany there has been a great increase. The demonetization of silver has not prevented Germany from prospering. But the Bryanites would have this country not only adopt free silver coinage, but 'absolute free trade.' The experience of Germany, like that of every other nation, demonstrates the folly of that course."

Corn and Wheat Yields.

The Philadelphia *Press* says (editorially): "Unless an early frost comes in the next ten days, and there has been only one such in twenty years, the corn crop will be a phenomenal yield. Corn fell below its price in Chicago in 1860, 20c. a bushel. It could not be transported then. Railroad rates to-day are about one-third then, and it is moving freely, exports exceeding last year by about one-fourth for four weeks. Cheap corn means cheap pork and lard, and while their quotations are at a low level they are not yet affected by the prospect of an enormous corn crop. Wheat receipts, 34,000,000 bushels, match those from the large yield of 1892, which was 611,000,000 bushels. No such crop is now estimated, but last year was not less than 540,000,000, and this year's so exceeds current estimates that a final crop of 550,000,000 will surprise no one. The entire round of foreign crops is equal to last year, and early estimates that the world's yield would be less than last year will prove illusory. Wheat fell 2c. a bushel, and is likely to go lower before it goes higher."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The feeling among jobbers and manufacturers last week that an improvement in demand for seasonable staples was in sight was evidently well founded, for at more than a dozen centers south and west demand is now more active, the volume of sales has increased, and the general outlook is much more favorable for business later in the autumn. Notwithstanding the Labor Day interruption the week's volume of business is slightly heavier, several cities reporting a larger demand this week to replenish depleted stocks than during two preceding months, notably among jobbers in groceries, hardware, dry goods, millinery, hats and shoes. The most marked improvement is at Chicago, St. Louis, St. Paul, Minneapolis, Pittsburgh, Charleston and Augusta, although other cities have reported a better feeling and prospects for more active demand. No such gain has taken place in financial as in commercial circles. While there is an increased demand for mercantile discounts the supply of money is larger, though rates for money remain unchanged west and south, with no change or higher quotations at eastern cities. New Orleans' bank failures have resulted in restricted loans and volume of trade at a time when the early movement of cotton and sugar prospects had stimulated trade. In Texas farmers are holding cotton for an advance in price, and leading Georgia jobbers find mercantile collections much improved. Providence reports a better tone among jewelry and cotton goods manufacturers, and that nearly all the latter are running full time again. The shrinkage of production of pig iron in the United States from a rate equal to 10,000,000 tons per annum to less than two-thirds that quantity is proving an effective remedy for stagnation in the iron and steel industries, and already demand has begun to reassert itself.

There is a more encouraging look to the prices movement also. Wheat is up again on continued active export movement and a very general tendency on the part of crop reporters to make out a nominal shortage in the world's production this year. Short crop views as to oats and cotton have like effects, the latter finally having some influence in raising print-cloths quotations, since surplus stocks of cotton goods have begun to have less weight. In addition, there are higher prices for anthracite coal and for petroleum. Enormous prospective supplies of Indian corn and hogs depress prices for them and for pork and lard. Quotations for coffee are also off on the week, and several sales of larger lots of wool have been made at cut prices, some for export. Oregon producers are said to be carrying 10,000,000 to 15,000.000 pounds of wool in warehouses, awaiting higher prices. Flour and sugar prices are unchanged.

Monthly gross earnings of railroads at last begin to show results of the extreme business depression of the past summer. August earnings on 104 roads aggregate $36,622,689, a decrease of 2.4 per cent. from a year ago. The granger, coal and Pacific roads show small gains, while the central western, trunk, southern and southwestern roads report decreases. An example of the general nature of the decreasing tendency may be had from the fact that two-thirds of all the roads making comparison with August a year ago show decreases. For the eight months the total earnings aggregate $279,855,463, a gain of 5.3 per cent. over 1895, in which year earnings of leading roads increased 4.2 per cent. over 1894.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 3,799,141 bushels, as compared with 3,369,000 bushels last week, 1,810,000 bushels in the corresponding week one year ago, 2,789,000 bushels two years ago, and with 5,357,000 bushels in the like week of 1893.

Large arrivals of gold from Europe, making the total receipts of specie over $22,000,000, with the increase of the Treasury gold reserve to $107,000,000, have maintained the bullish sentiment of the New York speculative stock market in the face of the Arkansas election and the bank troubles at New Orleans. The market has been a professional one, but the symptoms of approaching ease in the local money market, with the declaration of the regular Manhattan and Western Union dividends and the favorable annual report of the St. Paul Railroad, have tended to support prices. Foreign exchange has weakened to 4.83¾ for demand sterling, in correspondence with the advance of the Bank of England rate from 2 to 2½ per cent., and the rise of open market discounts there from 1½ to 2 per cent. The price of American gold was also raised, but the pressure of commercial bills and absence of inquiry save from gold importers promise to keep up the gold import movement.

Bank clearings for the current week reflect in part business conditions of several weeks ago. The week's total is $759,000,000, which is 8 per cent. less than last week, 24 per cent. less than the like total one year ago, 11 per cent. less than in the week two years ago, 4 per cent. less than in the second week of September, 1893, and 35 per cent. less than in the like period, 1892.

Business failures throughout the United States this week number 308, which, while 28 fewer than last week, is 95 more than in the like week of 1895, 85 more than in the corresponding period of 1894, and 8 more than in the second week of September, 1893, after three months of panic. More than twice as many failures are reported this week as in the corresponding week of 1892.

At Toronto general trade has improved slightly, many country merchants having placed orders this week. At Montreal business is quiet, with heavy arrivals of fruit and of wheat for export. Collections throughout the Province of Quebec are slow. In Nova Scotia business continues very quiet and collections unsatisfactory. More encouraging reports are received from the Labrador fisheries. Business failures in the Canadian Dominion this week number 41, against 30 last week, 22 in the week a year ago, 38 two years ago, and 36 three years ago.

FINANCIAL.

The Money Market.

The gold receipts from Europe and the replenishment of the Treasury specie reserve, with the better bank statement of Saturday last, have caused a further assertion of cheerful sentiments in the New York loan market. The continuance of gold importing arrangements, in spite of the advance of the Bank of England rate, also had a good effect, offsetting the financial troubles in the southwest, and the consequent increased demand for funds at New Orleans. The market here is, however, quiet in tone, and rates continue sufficiently firm to check business. Commercial paper is in somewhat better supply, and outside buyers have made their appearance in the market. Makers, however, are generally waiting for 6 per cent., and few transactions are reported at higher figures up to 9 per cent. The conditions in time money are very inactive. The offerings are limited, and 6 per cent., plus a commission, seems to be the only basis, some large loans for six months having been reported at the equivalent of 9 per cent. per annum. Call loans are 6 per cent. as a rule on the Stock Exchange for bankers' balances, having varied from 3 to 6 per cent., money on Friday being easier at 5 per cent., and closed at 3@4 per cent.

Surplus reserve	594,857	996,743	Dec. 401,886

The New York Banks.

The averages presented by the statement issued from the Clearing House Saturday show the effect of the arrivals of gold from Europe which began a fortnight ago. The banks lost over $600,000 by the operations of the Sub-Treasury, and the shipments to the interior are estimated at not less than $4,000,000. In spite of this the cash holdings, as shown by the averages, decreased only $1,800,000, the item being made up of an increase of $1,850,000 in specie and a decrease of $3,674,000 in legal tenders. The decrease in loans was $2,720,000 and that in deposits $4,863,000. It is also worthy of remark that the increase in circulation continues, the gain for the week having been $924,000. As a result of the other changes, the surplus reserve decreased $607,000, the figures of the statement comparing as follows with those of the preceding week:

	Aug. 29, '96.	Sept. 5, '96.	Changes.
Loans	$455,790,200	$453,070,100	Dec. $2,720,100
Specie	47,345,700	49,196,900	Inc. 1,851,200
Legal tenders	74,474,200	70,799,600	Dec. 3,674,600
Deposits	451,934,800	447,071,800	Dec. 4,863,000
Circulation	17,055,500	17,979,500	Inc. 924,000
Total reserve	121,819,900	119,996,500	Dec. 1,823,400
Reserve required	112,983,700	111,767,950	Dec. 1,215,750
Surplus reserve	8,836,200	8,228,550	Dec. 607,650

At the corresponding period last year the surplus reserve was $34,846,775, against $61,934,275 in 1894.

Bank Clearings' Totals

Foreign Exchange.

A fair volume of commercial bills of all kinds continues to come on the market, but inquiry is very much restricted. In fact, the buying of exchange this week proceeded mainly from the firms and banks that are importing gold. The dependence of the market on the latter movement is obvious by the fact that on Wednesday, in anticipation of the advance in the Bank of England discount rate and in its price for American gold coins, exchange here at once dropped to correspond with the change. Gold importing arrangements have continued to be made in London all the week, the engagements aggregating about $3,000,000 to $4,000,000, of which over $2,000,000 was taken on Thursday after the Bank of England had marked up its discount rate from 2 to 2½ per cent., and advanced the selling price for eagles ½d.—to 76s. 7½d. per ounce. Further gold engagements are expected next week.

Posted rates were steady at 4.83@4.85 early in

the week, but on Wednesday were reduced to 4.82½@4.85½. Actual business for demand sterling was also quiet at 4.84@4.84¼, but, under the circumstances above referred to, dropped on Thursday to 4.83¾, and long bills were demoralized, declining from 4.82¾ to 4.81¼@4.82. On Friday the market was a shade firmer, especially for cables.

*Holiday.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.84¼@4.84½; commercial bills, 4.80¾@4.81; francs, 5.20@5.21⅞; reichsmarks, 94⅜@94$^{15}/_{16}$.

The Bank of England directors on Thursday advanced the minimum discount rate to 2½ per cent., the figure having been 2 per cent. since February 22, 1894. The selling price for eagles was also raised ½d. per ounce, to 76s. 7½d., and the price for bar gold had also been previously raised. This action was taken in view of the large demand for gold for Egypt, as well as the drain now in progress to this country. The bank for the week to Thursday lost £1,323,256 in specie, and its reserve is 56.30 per cent., against 56.94 per cent. last week. The open market at London was disturbed by the advance of the bank rate, and discount rose from 1⅛ per cent. to 1⅝@1¾ per cent., call money being up to 1 per cent, as against ½ per cent. The stock market there was also disturbed by the change, consols declining 1 point.

Silver.

The silver market for this week has been dull, uninteresting and only a fraction lower. The London price declined from 30⅝d. to 30⅜d. per ounce, and the New York market exhibits a corresponding concession of ¼@½ in the commercial quotations. The only transaction in bullion certificates on the Stock Exchange was 2,000 ounces at 67c.

THE STOCK MARKETS.

The New York Stock Market.

In spite of some reactionary impulses, tone of speculation during the week has been strong. The market is in every way a narrow one, depending upon the professional element for its activity. Outside participation, either from our own public or London, cuts little figure, and the short interest has been so greatly reduced that buying to cover outstanding bear contracts is no longer capable of affording much support to prices. It would seem, however, that large interests which parted with their holdings after the Chicago convention have concluded, on a survey of the political field, that the chances favor success of the sound money cause, and have continued to buy back their securities. The result of the Arkansas election produced only a momentary impression, and much more significance is attached to the coming state election in Maine, which occurs next week. Part of the reactionary tendencies on Wednesday and Thursday were due, it seems, to the bank failures at New Orleans, but the unfavorable developments were in the main offset by the continued receipts of gold from Europe. The amount already arrived foots up some $22,000,000, and the deposit of $13,000,000 or so thereof in the Treasury has raised the gold reserve to over $112,000,000. Moreover, the prompt decline of exchange here when the Bank of England on Thursday raised its discount rate and advanced the selling price for American gold coin affords a promise of the continuance of the inflow, the shipments of gold by steamers leaving for this country to-day being, so far as known, about $3,500,000. The money market continues firm, but has lost the nervous and disturbed tone that characterized it a fortnight ago, although the scarcity of time money continues, and the few loans reported are on a basis of 6 per cent., plus a commission, which rates are naturally an obstacle to business. The better supply of call money is, however, noticeable, and the extreme rate this week has been 6 per cent. Money has therefore ceased to be a disturbing factor in speculation, and while the "street" has been inclined to wait for a reaction after the advances that have been scored in the last two weeks, there is an idea prevalent that further improvement is in sight, particularly if the political outlook continues to grow brighter.

The features of the market have been found mainly among the regular speculatives. St. Paul, which advanced from 69⅛ to 71⅜, was a case in point. The movement in this stock was assisted by the favorable character of the annual report, though it reacted to 69⅜, perhaps on disappointment that the directors on Thursday did not declare any addition to the regular 2 per cent. semi-annual dividend. The Manhattan directors on Tuesday declared the regular quarterly dividend of 1½ per cent., while the "street" as a rule expected a reduction. The stock rallied to 86⅜, although the explanation was offered that the dividend was made largely because of the existence of a large surplus and the expectation that further economies could be made. Western Union's dividend was also at the regular rate, and strengthened that stock in the market. Sugar, too, was an active feature, rising to 117⅜, and selling off after the declaration of the regular 3 per cent. quarterly dividend on the common. The southern stocks were unsteady at first, on the continuance of the rate war in that section, but on Friday Louisville, which had touched 39¾, rallied to 42 on the news that another injunction had been issued against the cutting of rates.

Boston Stock Market.

The tone of the market has ruled firmer, with general values showing a gain. Atchison closes ½ point higher and Chicago, Burlington & Quincy 2⅝ points higher for the week. Other railroads also show an advance. Boston & Montana has been fairly active and closes 1⅝ points up, with Calumet & Hecla 4 points and General Electric 1¼ points higher. Sugar has been active and prices have advanced, although the close is easier, though higher than a week ago.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE FEATURES.

A MODERATE IMPROVEMENT IN DEMAND IN STAPLE LINES. BETTER FEELING AS TO THE OUTLOOK.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, September 11.—General business continues quiet in the merchandise market, with only a seasonable hand-to-mouth trade in most lines. Rates for money continue high, although the supply is larger in the open market, and increased inquiry for collateral loans, best factory paper and commercial paper is noted. Between the banks there is a fair supply of money, but it is held in few hands. Commercial paper ranges at 7@9 per cent., with call loans at 7@8½ per cent. The trade in boots and shoes is quiet, with buyers only taking samples as a rule. It looks as though few case orders would be placed before the election. Leather is dull, and in the absence of demand the tone favors the buyer. Hides continue to advance even under a slow demand, and offerings are light.

Providence, September 11.—While trade in general is dull, and the disposition is to purchase for present wants only, there is a slightly better tone both in jewelry and cotton manufacturing. Nearly all the large cotton-cloth mills which united in the partial curtailment of the summer are again running full time.

Philadelphia, September 11.—There is a little better demand for cotton goods, but general business in dry goods is dull. Textile manufacturers are doing very little, and a number of mills are running on half time, while others are shut down entirely. There is very little demand for wool. Boots and shoes fairly active, but prices not advancing. Coal is somewhat active, owing to the advance in price, with a prospect of going higher on the approach of colder weather. Iron continues inactive and prices low but steady.

Pittsburgh, September 11.—A further improvement is noted in local trade circles since last week. Country buyers are more numerous and local jobbers are more hopeful. Collections are reported difficult to make, and no improvement is noted in that line. A slight improvement in sales is noted in the iron business since last week, but prices remain unchanged. Inquiries are more numerous and the outlook is promising.

West and Northwest.

Cleveland, September 11.—The week's trade has been broken by reason of Labor Day on Monday and the local half-holiday on Thursday, which is Perry's Victory Day. Otherwise there is no special change in actual trade conditions, but there appears to be some improvement in sentiment and a more hopeful feeling regarding general business of the late fall. Industrial operations continue very quiet along the most conservative lines. Collections are very slow.

Cincinnati, September 11.—General business looks a little better this week, but its permanency is questioned.

Detroit, September 11.—General business shows no improvement. Orders are light. Collections are slow. Money is close, with a moderate demand.

Chicago September 11.—In dry goods and boots and shoes there is a good attendance of buyers, and a slight increase in outside buying orders in spite of the warm weather, but the buying is generally in conservative quantities. The demand for heavy hardware shows some improvement, with orders generally for small quantities, but plentiful, and collections prompt. Some improvement is also noted in the light hardware trade. Pig iron sales are about the same as during the previous week. Business in barbed wire is light, with values steady. Steel rails, rods and billets are unchanged in price, with a somewhat better inquiry, but there is no increase in actual sales. Small orders for bar iron are plentiful, but the aggregate business is not large. The movement in lumber is light and the feeling easier. Butter and cheese are firm, while eggs and potatoes have advanced. The grocery trade shows a considerable improvement. There is more outside demand to replenish depleted stocks during the week than within the last two months put together. Receipts of wool 342,700 pounds.

Louisville, September 11.—A seasonable trade in general merchandise is noticeable, especially in dry goods, boots and shoes and groceries. A considerable number of country buyers are in the market, but they are purchasing conservatively. Leaf tobacco is firm for good grades. Better prices are realized for well-known brands of whiskies. Collections are only fair.

St. Louis, September 11.—There is a better feeling among jobbers in nearly all lines, especially in dry goods, millinery, hats and caps, boots and shoes, groceries and light hardware. Interior buyers are here in large numbers, and while the hand-to-mouth policy marks transactions even stronger than heretofore, credits are closely looked into. The aggregate sales are of a satisfactory volume. Collections also show an improvement. Receipts and shipments of boots and shoes show an increase of more than 4 per cent. over the first of the year up to date over same period of last year. Values, however, are lower than the cost of the raw material war-

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM AUGUST 29, 1896, TO SEPTEMBER 4, 1896, INCLUSIVE.

rants. Prices of hides are steadily hardening, with only a fair general demand. The canning season has enlivened the tin trade. Sales of pig iron are small, with a healthy undertone. Demand is good for barbed wire and nails.

Kansas City, September 11.—Jobbers in all lines report business quiet. Collections are slow. Produce and commission houses are receiving liberal shipments of fruits and vegetables, with low values.

Milwaukee, September 11.—Trade in all lines is quiet and no new features are noticeable. Collections remain slow.

St. Paul, September 11.—Dealers in dry goods, drugs, hardware and groceries are having a good trade, while in other lines, where the busy season is over, it is expected. In lines where advance orders are customary goods are now being shipped.

Minneapolis, September 11.—Some lines, notably dry goods, boots, shoes and heavy hardware, report better business, while others are having fair trade. There is more inquiry for lumber, but sales of flour are less than in previous weeks. On the whole, there is a slightly better feeling because elevator companies are getting some outside money where three weeks ago little was to be had. This means an increased movement of wheat and better collections from country merchants.

Omaha, September 11.—Jobbers report no improvement in trade, and collections are only fair.

Southern Cities.

Charleston, September 11.—Business in all lines has shown a marked improvement. Collections are still being complained about, but the outlook for a good and active fall trade is good.

Savannah, September 11.—Jobbers and retail merchants report trade very fair and collections good. The naval stores market is firm, with good demand. Shipments are falling off rapidly.

Atlanta, September 11.—Trade is about the same as last week. Collections are a little slow.

Augusta, September 11.—General business is improving, but especially with jobbers of groceries and provisions, who report having as much as they can do. This is owing to the early marketing of cotton, large receipts and good prices for the same. Country collections are improving.

Jacksonville, September 11.—Wholesale and retail trade shows a slight improvement, while collections are fair. Business so far has been better than the most sanguine of our jobbers predicted, also collections, but conservatism is still shown in filling orders.

Birmingham, September 11.—Trade shows no improvement over last week. There is a better feeling as the cotton crop begins to move. Money is a little tight and collections only fair.

Chattanooga, September 11.—The short cotton crop is believed to be felt more by dry goods houses than the effects of politics. Otherwise, no change is noted. Collections are moderate.

Nashville, September 11.—The banks continue the same conservative course, at the same time the monetary conditions somewhat improved by reason of outside money seeking collateral paper. Transactions have been made this week at 6 per cent. Stock and bond markets are quiet. The movement of merchandise is growing heavier and all lines are comfortably busy. Groceries are notably active. Collections are good for this season of year. Jobbers hold to their previous belief as to the fall payments being unusually good.

Memphis, September 11.—General trade continues quiet in all lines. Collections are only fair.

New Orleans, September 11.—Distribution of dry goods, general supplies and machinery all show considerable increase, and predicated upon the early movement of cotton and excellent prospects of sugar crop, a good fall trade is anticipated. Country stocks generally are somewhat depleted. Cotton is moving freely; receipts meet quick sales. Sugar is very quiet, with light arrivals. The rice crop is dissappointing in yield, and receipts are quickly absorbed. The movement of bulk grain has been somewhat restricted by want of tonnage, but an abundance of ocean tonnage is in sight for October and November. Three banks have suspended this week, and the Clearing House has decided to issue certificates for exchange between banks, and temporarily to limit currency withdrawals. This action is considered conservative and wise on the part of the banks, in view of the necessities for crop purposes, and will undoubtedly tend to maintain confidence. Money is loaned only for crop purposes and mercantile discounts at 8 per cent.

Galveston, September 11.—The business outlook is not encouraging to wholesalers. Interior merchants are buying cautiously, and only staples. Collections are dull, owing to farmers holding cotton for better prices.

Pacific Coast.

San Francisco, September 11.—Trade in mercantile lines continues dull and collections slow. Fruit, especially grapes, is plentiful and cheap. The hide and leather market is dull. Wheat freights are firm.

Portland, September 11.—Crockery is somewhat more in demand. Groceries are dull, also dry goods. Collections are easier. Between 10,000,000 and 15,000,000 pounds of wool are said to be stored in Oregon warehouses, which buyers decline to sell at present prices. Hop picking has begun. The acreage is much less this year.

Tacoma, September 11.—Business shows no distinguishing features from the general quiet that has prevailed for some time. Wheat is coming in, but the movement is still very light.

Seattle, September 11.—Business is fair, but fitful and conservative, some lines doing well, while others are somewhat stagnant. Wheat is arriving freely and is of better quality than anticipated.

Canada.

Toronto, September 11.—The condition of trade has improved slightly. The city is full of visitors, and among them many country merchants who are placing orders for goods. Payments are also improving, with a freer movement of grain.

Montreal, September 11.—General trade is quiet, with no special features. Leather sales continue dull. There is a fair movement in groceries and teas. The local market is glutted with large arrivals of fruits from the west, and ocean shipments of wheat are large. Ocean freights have improved, with good prospects until the close of navigation. Quebec reports shoe manufacturers almost at a standstill, but buyers are arriving and a better state of affairs is shortly expected. Collections throughout the province are rather behind. The business situation is considered healthy.

Halifax, September 11.—Merchants report wholesale trade very quiet and no material change in prices. Collections are complained of in all quarters. Unusually heavy rains have interfered with harvesting operations. Business in St. John, N. B., shows very little activity. Shipments of lumber to United States ports continue comparatively small. Reports from the Labrador fisheries are more encouraging than last week.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2.....	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Dry Goods.

The market continues quiet, but conditions show some improvement. The return of people from vacations is forcing retailers to open up better assortments of seasonable goods, and this helps the jobbing demand. The firmer tone to raw cotton tends to strengthen the price of the manufactured goods, but with sales slow and the surplus hardly worked out manufacturers find it slow work to do much business at any advance. The market lacks life, and buyers are operating in a hand-to-mouth way. Printed fabrics are moving slowly, but some seasonable goods are being taken. Ginghams are dull and trade unsatisfactory. Dress woolens continue to move slowly and business with mills is dull. Jobbers are meeting with a very moderate trade. Men's-wear woolens are selling very slowly for the spring trade, and the prospect is very unsatisfactory to manufacturers. Orders placed thus far have run largely to low cost stuff.

Wool.

The volume of sales shows an increase, which is due to some large blocks of territory wools being cleaned up at cut prices. English buyers are bidding on these wools, and one block of 400,000 pounds was sold in Boston this week for export. Prices bid by English buyers are about 26c. scoured for fine medium landed in England, with as high as 27@28c. for choice staple lots. This nets the seller on this side about 25c., which is below the views of most holders. Local manufacturers have shown more interest of late, and have purchased some good lines. If money were easier, the feeling is that some considerable purchases would be made, as it looks as though values had struck bottom. With so much machinery idle it takes but little wool to meet present needs of manufacturers, and much of the late purchases have been taken because the wool was cheap. Fleece wools are dull, but held steady. Australian wools move in moderate volume at old prices. The next London sale opens September 22. Carpet wools are dull.

FAILURES AND PANICS.

The New York *Journal of Commerce* says: "'Every decade from 1825 to 1866 witnessed a financial panic in England, alarming in its episodes and disastrous in its consequences. From 1866 to the present time three periods of notable failures have occurred without any serious panic arising.' This is the first sentence of an article on 'English Financial Panics' by Mr. Ackland in the London *Bankers' Magazine* for last month. The statement was not made by the writer, nor is it cited by us, as evidence of the beneficent influence of the single gold standard, but it is important evidence in rebuttal when the silver men charge that the abandonment of free coinage by this country and France deprived the world of a great part of its money, and precipitated a most injurious scramble, as it is usually called, for the remainder. When great emphasis is laid upon the value to the world of the French 'parachute,' and General Walker says 'the twenty-three years during which it (the single gold standard) has been trying to make its way into the light have been years of unparalleled commercial disaster and disturbance,' it is not irrelevant to cite the evidence of five London panics in fifty years while France was regulating the world's currency for it, and no such acute disturbance in England in the past thirty years. Our own panics have been plainly due, not to insufficient currency, but to overtrading, or too rapid conversion of circulating into fixed capital, or, in the latest instance, to doubts about the monetary standard. Mr. Ackland urges two amendments to the English Bank act. One is that whenever the discount rate reaches 7 per cent., say, the Bank of England may issue £2,000,000 of notes, to be withdrawn before the rate is reduced, and the other is that the government may do legally, what it has hitherto done illegally, authorize the bank to make a further issue of notes, with the discount rate not under 10 per cent., the profits to accrue to the state. Mr. Ackland's reason for putting this power in the hands of the government rather than of the bank is that in times of panic the most important thing is to make an impression on men's minds, and an act of the government is more impressive than an act of a board of directors, even of the Bank of England."

TREASURY DEFICITS AND RECEIPTS.

The *Commercial Bulletin* (New York), "with a view of correcting erroneous statements and also to furnish material for campaign use, reprints the following from the Treasury Department memorandum of Treasury deficits and receipts and of the public debt paid by the two last preceding administrations," which statement is also accompanied by a comparison of the customs receipts under the McKinley and Wilson laws. It was as follows: During the fiscal year 1888, ended June 30, 1888, the revenues of the government were $111,341,273 in excess of its expenditures.

During the following fiscal year, 1889, the revenues were $87,761,080 in excess of the expenditures.

During the fiscal year 1890 the revenues were $85,040,271 in excess of the expenditures.

The so-called McKinley tariff act took effect on the first day of October, 1890, and during the fiscal year ended June 30, 1891, the revenues were $26,838,541 in excess of the expenditures.

During the fiscal year 1892 the revenues were $9,914,453 in excess of the expenditures.

During the fiscal year 1893 the revenues were $2,341,674 in excess of the expenditures.

During the fiscal year 1894 the expenditures exceeded the revenues to the amount of $69,303,260.58, notwithstanding the fact that the expenditures of the government were $16,752,676 less than in the preceding year. The McKinley bill was in force during the whole of the fiscal year 1894.

The so-called Wilson tariff act took effect on August 28, 1894, and the revenues for the fiscal year 1895 were $42,805,223.18 less than the expenditures, and during the fiscal year 1896 the revenues were $25,203,245.70 less than the expenditures.

RECEIPTS FROM CUSTOMS AND TOTAL RECEIPTS FROM ALL SOURCES UNDER MCKINLEY ACT.

Twelve months ending	Customs.	All sources.
September 30, 1891.....	$196,894,357.89	$371,932,536.81
September 30, 1892.....	185,938,858.19	364,847,501.72
September 30, 1893.....	189,182,905.46	365,534,609.55
Eleven months ending		
August 31, 1894.....	112,590,939.77	292,078,342.91

RECEIPTS FROM CUSTOMS AND TOTAL RECEIPTS FROM ALL SOURCES UNDER WILSON ACT.

Twelve months ending	Customs.	All sources.
August 31, 1895.....	$161,201,169.35	$295,061,022.16
August 31, 1896.....	154,218,813.94	321,726,319.37

On the first day of March, 1889, the beginning of President Harrison's administration, the available funds in the Treasury, exclusive of the $100,000,000 gold reserve, were as follows: Agency account, $64,502,445.02; net balance in Treasury, $165,846,471.10; total, $230,348,916.12. On the first day of March, 1893, the beginning of the present administration, the available funds in the Treasury, exclusive of the $100,000,000 gold reserve, were as follows: Agency account, $38,365,832.90; net balance in Treasury, $24,084,742.28; total, $62,450,575.18.

In addition to the ordinary revenues received during President Harrison's administration, there was converted into the Treasury $54,207,975.75, which had been held in trust under the law as a fund for the redemption of national bank notes,

This proceeding was authorized by the act of July 14, 1890, commonly known as the Sherman act.

From the first day of March, 1885, the beginning of Mr. Cleveland's first administration, to March 1, 1889, the public debt was reduced $341,448,449.21, and from March 1, 1889, the beginning of Mr. Harrison's administration, to March 1, 1893, the reduction of the public debt was $236,528,666.10.

The amount of free gold in the Treasury on the seventh day of March, 1893, when the present secretary took charge of the department, was $100,-982,410.

VALUES OF IMPORTS AND EXPORTS OF MERCHANDISE UNDER THE McKINLEY TARIFF ACT.

	Imports.	*Exp'ts, dom. and foreign.*

ANNUAL AVERAGE EXCESS OF EXPORTS OF MERCHANDISE AND SILVER.

Under McKinley act of 1890.....	$142,157,384
Under Wilson act of 1894.....	143,111,188

WHY THE FARMER'S PRICES ARE LOW.

The Philadelphia *Press* says: "The farmer's market is at home. If his prices are now below the average it is because his home market is a poor one. In it he sells two-thirds of his wheat, 97 per cent. of his corn and nine-tenths of his meat and pork, nearly a third of his cotton, a quarter of his tobacco, and practically all of his hay, wool, fruit, fowl and dairy products. Farm prices, as a whole, and taken decade by decade, fall when the supply all over the world is increased; but a fall below the average, such as exists now, is due, and due solely, to a poor home market.

"How poor this market is now, because of the Wilson tariff and of currency agitation, few farmers realize. See first what this market is. The farmer sells to those that work off of the farm. In 1890, and the number has not very greatly altered, the workers off the farm were these:

Trade and transportation.....	3,325,962
Manufacturing and mechanical.....	5,091,669
Mining and fishing.....	629,098
Professions.....	947,723
Domestic and personal.....	4,360,506
Total.....	14,354,958

"On the farm, in the dairy and on the stock range there are 8,384,112 persons. These sell to the other 14,354,958 at work. This is the home market. If these 14,354,958 persons are at work the farmer's market is good. If not, not.

"Are they at work? Take trade and transportation. In 1894 the Interstate Commerce Commission found that 93,994 persons on railroads had lost their places. The railroads employed in 1890 749,301 persons, one-quarter of those in trade and transportation. If the railroads have 93,994 persons out of work, the express, telegraph and telephone companies, hackmen and carters, clerks, copyists and mercantile men, bankers, brokers and business men have at least as many out of work. They probably have more. This makes at the railroad rate for the unemployed, and this is known by count and not by guess, 372,000 persons out of work. Assume four persons to the one employed, a low average, and there is 1,500,000 of population with the breadwinner out of work in trade and transportation.

"In manufacturing and mechanical trades the facts are known as to two, cotton and wool. In the cotton mills in 1890, 173,058 persons were employed. To-day, out of 14,000,000 spindles, 5,000,000 are idle, and nearly all the rest are on half time. This means that 120,000 cotton operatives are idle. In wool, 40 per cent. of the mills are at work, the test being the consumption of wool in August. Out of 135,580 persons in hosiery, wool and carpet mills in 1890 there are to-day 81,000 idle. This is a matter of weekly returns. In all, in cotton and wool, there are idle 201,000 persons, and many have been idle half the last year. These represent a population of 804,000 whose breadwinners are idle.

"This is not all. Deduct from manufactures the 308,638 persons employed in cotton and wool and there are left 4,783,031 persons in other manufactures. These are no better off than cotton and wool in many trades. If in 308,638 persons in cotton and wool we know that 201,000 are idle, or two-thirds, it is a low estimate that one-third, or 1,500,000, are out of work or on short time in the other trades. In mining and fishing the amount now employed does not greatly vary from 1890, though prices and wages are low; but taking trade, transportation, manufactures and mechanical industries and this is our showing:

Railroads.....	93,000
Other trade and transportation.....	279,000
Cotton and wool.....	201,000
Other manufacture and mechanical.....	1,500,000
Total.....	2,073,000

"Here are 2,073,000 out of work, with a population of 8,000,000 which is dependent upon them.

"Now with this number out of work in these lines think how many must be out of work or on reduced pay in the professions, 947,723 in number, and in domestic and personal service—barbers, waiters, house servants, and so on—in all, 4,360,506 persons. In all, there are here 5,308,229. How much their employment is reduced one cannot say; but there is here a large reduction in consumption. We are not guessing in this article, so we make no estimate; but the number is large. There is at least another 1,000,000 of population in domestic and personal service and the professions on short commons.

"Taking these facts can any one doubt that in all between 8,000,000 and 9,000,000 people in the country have had their capacity to buy reduced by the disorganization of business due to tariff agitation and to an unstable currency? Since they could not buy prices have fallen, and with falling prices come hard times and no market for the farmer. Is there proof of no market? Rather. In 1892 the United States consumed 386,000,000 bushels of wheat and 2,000,000,000 bushels of corn. In 1895 the consumption of wheat had fallen to 315,000,000 bushels and of corn to 1,200,000,000 bushels. There were at least 4,000,000 more people in the country, but they used 70,000,000 bushels less of wheat and 800,000,000 less of corn. This was true of all agricultural products.

"Is it not as plain as a furrow in a newly-plowed pasture that the farmer is suffering from idle mills and not from idle mints? He does not want more free silver. He wants less free trade. Revise the tariff, restore protection and create confidence by maintaining the existing gold standard, and this 8,000,000 to 9,000,000 of population who are on short supplies will be again buying the farmer's products and advancing his prices."

THE "GREATEST CORPORATION ON EARTH."

In a recent number of *Current Literature* an English writer asserts that the "greatest corporation on earth is the London & Northwestern Railway Company of England, with its capital of $595,-000,000, a revenue of $6,500 an hour, 2,300 engines and 60,000 employees, and repairs that cost $130,-000 a month." The *American Exporter* adds: "The Northwestern Railway Company is, no doubt, a gigantic corporation for a little country like England, and worth bragging about, but we have a bigger one here in the United States that might absorb it very easily. The Pennsylvania Railroad, for example, has a capital of $857,075,600, and 15,430 miles of track which traverse thirteen states. It has 3,756 locomotives, which consume 20,000 tons of coal a day and make runs equal to the distance around the globe every two hours. It has 3,935 passenger cars, 154,000 freight cars, 350 Pullman cars, and 241 other cars for construction and other purposes, making a total of 158,524 cars, which make a journey equal to the circumference of the earth in every eight minutes. The locomotives and cars, if placed on a single track, would reach from New York to Chicago, or ten times the distance from Philadelphia to New York. The rails of the Pennsylvania Railroad, if laid end to end, would encircle the globe and overlap about 4,000 miles. The total annual revenue of the road is $135,000,000, equal to $372,506 a day and $15,525 every hour of the day and night, which is two and a half times as much as that of the Northwestern of England.

"The Northwestern boasts of 60,000 employees, but the Pennsylvania company has over 100,000, who, with their families, make up a total of about 500,000 persons dependent for their living upon the $60,000,000 it distributes in wages every year. Last year the Pennsylvania Railroad Company moved 14,395,266,375 tons of freight per mile and carried 1,577,891,050 passengers. The freight carried was equal to a ton around the world every minute of the year. The money invested in the property was equal to a double line of silver dollars 8,000 miles in length. In 1895 the Pennsylvania company owned 5 per cent. of all the railway mileage in the United States, 10½ per cent. of all the locomotives, 11½ per cent. of all the freight cars, and had 13 per cent. of all the railway employees upon its payrolls. It carried 11 per cent. of all the passengers who traveled by rail in the year 1895, and its earnings were 11²/₅ per cent. of all the earnings of all the roads in the country. Like the great Northwestern, the Pennsylvania makes almost everything it uses, and with its plant could build a locomotive every day in the year if it chose to do so."

WAGES IN SILVER COUNTRIES.

Here is some information concerning wages paid to workingmen in India, given under the authority of United States Consul-General Polk, at Calcutta:

"Wages for unskilled labor, as truckers, sweepers, etc., 4 annas (6 cents) per day. Wages for skilled labor, such as the foreman in the picking, carding, roving, etc., rooms in rice mills, 12 annas (18 cents) per day. Native engineers and firemen receive 1 rupee (24 cents) per day. Coal costs 4½ annas (7 cents) per aund (82²/₇ pounds).

"American workingmen will perhaps be interested in reading what United States Consul Jernigan, at Shanghai, says about the wages of laborers engaged in the cotton mills of China, which country is on a silver basis. Mr. Jernigan says: 'The cotton mills now in operation at Shanghai employ 5,000 laborers at the maximum average per day of about 20 cents in silver. The food of these laborers consists of rice, cabbage, fish occasionally, and sometimes Chinese pork two or three times a month, the cost of the entire food supply not exceeding two Mexican dollars per month. The wages and the food appear satisfactory to the laborers, and there has been no complaint by them, either on account of wages or food. There are four large cotton mills now being built, and these will employ an additional 5,000 laborers, the number employed by the four cotton mills now being operated. There will be 10,000 laborers employed in the cotton mills at Shanghai alone at the cheap rate of about 10 cents in gold per day, and it is represented to me that, under the guidance of European supervision, by the aid of modern machinery, the manipulation of the cotton is as skillful in the cotton mills at Shanghai as in those of any country. The American laborer cannot live on the wages paid to a Chinese laborer, and he would not and ought not to be contented with the food that a Chinese eats with satisfaction. Such wages and such food would depreciate the manhood and the courage which have ever been the safeguard of our free institutions, and the absence of which is so painfully evident around me in the bearing and character of laborers who receive their wages in money of such little value and subsist on food of as little sustenance.'"

WORLD-WIDE STRIKE PROPOSED.

The Philadelphia *Ledger* says: "It is reported from London that an effort to organize labor on an unprecedented scale is to be made by the dockmen's unions of Great Britain. The plan contemplates an enrollment of all the laborers employed in and about the wharves, warehouses and vessels, not only in the United Kingdom but on the continent, and also in the United States, Canada and Australia. In a word, every man employed in loading and unloading vessels in every important port is expected, according to the comprehensive scheme, to be prepared at any time to join in the movement for higher wages, shorter hours, or whatever the organization may demand. It is intimated that the proposed movement may be entered upon in a few weeks, and that a general strike of dockmen may take place before the month is out.

"The great strike of London dock laborers in 1889, which involved 100,000 men, was practically successful, but since that year attempts to secure further concessions from the London dock companies have failed, for the reason that when strikes were ordered at any point the shipping business was abandoned there temporarily and removed to some other place where trade was not interrupted. A close federation of dockmen at all important ports will, it is believed by the sponsors of the movement, greatly aid strikers in securing their demands at any port where the men want concessions. Of course, if the scheme can be executed it would be possible to paralyze commerce on short notice, and compel wharfmasters to grant concessions. The leaders of the movement profess to be sanguine of success, and say that there will be no trouble, because when they make their demands they will be supported by such a strong organization that employers will not try to oppose them, but will save trouble and the loss of business by prompt compliance. Less enthusiastic persons, however, will conclude that the federation must show its strength before its power will be admitted, and that if demands are made with a strike as the alternative the strike will follow. That it can succeed with the great number of unemployed clamoring for work in every port is not probable. But a strike may cause great inconvenience and loss to commerce, and for this reason shippers and others will watch the movement closely as it develops.

"A strike in an American port to redress some grievance among dockmen in London would present a new feature in the labor movement; but this might sooner or later follow from the organization of labor on an international scale. It would require extraordinary executive ability on the part of the central authorities of the world-wide dockmen's federation to make a general strike successful, for the reason that the condition of laborers varies greatly in different countries. An organization of this nature would be likely to fall to pieces from its own immensity, if it survived its formative period at all, unless guided by something approaching genius. The storm center of the agitation for the movement appears to be in England, and it is urged that the leaders of the agitation there could not make an international organization successful. It is probable that some action will be taken upon the subject at the Trades Union Congress about to assemble, and much interest will attach to the attitude which the representatives from this country will assume toward the project. It would be asking rather too much of an American worker satisfied with his employment to participate in a strike in sympathy with laborers in some distant part of the world, speaking another language, and with whose actual local surroundings he could have but the most meager information. Some races are quick to resent fancied wrongs, and would quit work on much less justifiable ground than an intelligent, prudent American workman would. Yet in the mooted international federation the American members would be expected to join in a sympathetic strike in support of some foreign strike as to the real merits of which they may have either no knowledge or the greatest doubt."

BRITISH TRADE RIVALS IN AFRICA.

The London *Times* says: "Mr. Cave, the British consul at Zanzibar, has some interesting observations in his last report on the decline of British trade with East Africa. The imports through Zanzibar last year were of the declared value of £1,293,646, British India being first among the importing countries, rice, specie and piece goods being the chief goods from India. Among European countries Great Britain takes the first place, but her imports show a decline, chiefly in piece goods and hardware, which Mr. Cave attributes wholly to foreign competition. The so-called 'gray cloth,' a kind of unbleached cloth which is in great demand in the interior of Africa and in some parts forms the only currency, is the most important class of piece goods imported, and America has the best part of this trade, not only because it was first in the field with it, but because it is of better quality than Manchester productions of the same price. Mr. Cave thinks that if British manufacturers would pay more particular attention to the uniformity of weight, measurement, texture and ingredients in the goods they send to Africa, and if British productions were pushed in British East Africa and Uganda, they would regain the position of which they have been deprived by foreign competition. Printed handkerchiefs, called 'kangas,' measuring about 50 inches by 72 inches, which are the principal garments of the native women, were at one time imported wholly from Manchester and Glasgow, but now they are supplied from Holland by German firms. The cause of this seems to be cheaper printing in Holland. Among other important articles, the import of which from Great Britain has declined, Mr. Cave mentions brass wire, which is largely used for barter, and which at one time was exclusively obtained from Great Britain, but now goes from Hamburg and is believed to be made in France. Common mottled bar soap of British manufacture is being driven out by German soap. The cement trade has gone largely to Germany and Belgium. English tools have been superseded by cheaper ones made on the continent. The demand, the consul says, is above all things for a cheap article, and unless the British manufacturer will come down from his pedestal and produce an article, as his foreign competitors do, that will meet the practical requirements of the buyers, it is likely that a trade which might be fairly profitable to him will drop more and more into other hands."

GRAIN EXPORTS FROM SOUTHERN PORTS.

The *Northwestern Lumberman* says: "The movement of grain to southern ports introduces a new problem into the traffic and trade of the country at large, the full result of which we shall have to wait for. The *Railway Gazette* shows that the total exports of corn for the first seven months of the year was 57,114,908 bushels, valued at $20,296,967. This was an increase of over 33,426,000 bushels as compared to exports of the same period in 1895. Of the increased exports New York secured only 3,250,000 bushels more than in the previous year. That city's total export of corn for the first seven months of the bushels. Both Baltimore and New Orleans exported a larger amount than New York. New Orleans advanced to the first rank as a corn exporting port, while the other southern ports show large increases. Baltimore gained 8,000,000 bushels. Newport News and Galveston together increased 8,500,000. During July, as usual, corn followed the northern routes of traffic, and for that month New York held first place as an exporting port. But despite the hot weather the southern ports show large increases. The movement to southern ports is attributed to exceedingly low rail rates, especially to gulf ports. The movement of wheat has been favorable to New York, and it still holds first place as a wheat exporting point. This doubtless is because the wheat of the northwest is mainly concentrated at Chicago, Duluth, Toledo and other lake ports, and during the season of navigation largely makes its way to the seaboard by vessels and canal. The *Lumberman* has before pointed out that the increased tendency of the corn movement to gulf ports will be an aid to the southern lumber trade, because it determines a large number of cars into the yellow pine and cypress region, which can be loaded back with lumber. This should eventually do away with the scarcity of cars for southern lumber shipment, and it is reasonable to expect that the resulting tendency will be a lowering of lumber rates."

GOVERNMENT AID TO GERMAN TRADE.

The *Journal of the Society of Arts* (London) says: "The German government has in contemplation, says Consul Merritt, of Barmen, a measure which promises to be so advantageous in its operation that it seems worthy of attention. Every commercial nation in the world, with the exception of the United States, has a branch of executive government, the express functions of which relate to the control and development of commerce. Prussia has for many years been one of the foremost countries in the race and struggle for commercial development, and her Handelsministerium (Department of Commerce) has been of incalculable advantage to the entire German nation. It has been found, however, that because the Prussian Department of Commerce belongs to the kingdom of Prussia, the Minister of Commerce does not come into relation with the great departments of the imperial government in a manner which gives him proper standing, and the well-earned consideration which would be his if he were an imperial cabinet chief. Therefore, it is intended to consolidate the Handelsministerium of the four kingdoms into one department of commerce for the whole German empire. The German system, as it has operated in the past, has fostered the establishment of chambers of commerce, and trade organizations of a like character, in every community where there is room, and sufficient interest to warrant the establishment of such bodies. These bodies represent the quintessence of the great commercial life and element of Germany. There is no question connected with the development of trade interests, of manufactures, credit capacity of foreign countries, advantages to be obtained by treaty stipulations, injuries resulting from measures adopted by other nations in restraint of trade, which is not thoroughly discussed and carefully considered by the many German chambers of commerce scattered over the country. These bodies report to the Minister of Commerce with regard to the influence and bearing of all such matters, as they are connected with the commercial interests of the various localities, and, by petition or otherwise, they often secure action through their minister and the Minister of Foreign Affairs, which is of great advantage to them. The Minister of Commerce and his subordinates are in a position to know, with the greatest accuracy, all matters and details connected with the development and progress of commerce. Every chamber of commerce makes an elaborate report each year. Whenever a foreign government seeks a benefit or a permission which includes an advantage to the commercial interest of the foreign power, the Prussian Minister of Commerce has always been enabled to secure a corresponding advantage for the commercial interests which it is his duty to guard. And when it appears to the Minister of Commerce in Prussia that foreign commercial enterprise is a menace to a local interest, great or small, steps are immediately taken, says Consul Merritt, to hinder the development of such enterprise."

GERMANY'S SUGAR MARKET.

The *American Agriculturist* says: "Germany means to control the American sugar market if possible. Less than a third of a century ago Germany imported most of her sugar, but she has since encouraged the beet sugar industry to such an extent that, besides supplying about all the sugar consumed in that country, the German beet sugar factories now have a surplus for export, and the German government has recently increased the export bounty on such sugar to enable it to monopolize the American market. Not only that, but it sent a commission to this country to examine into the possibilities of America producing its own sugar. The commissioners were Prof. Herzfeld and Dr. Frentzel of Berlin, Mr. George Scheller of Breslau, and Mr. T. Hecker of Magdeburg. These gentlemen visited the six sugar factories now in successful operation in the United States—at Grand Island and Norfolk, Nebraska; Lehi, Utah; Watsonville, Alvarado and Chino, Cal.—and were forced to admit that the national possibilities of this industry were far more flattering in this country than in Germany. Their report to this effect was one of the influences that induced the German government to increase the export bounty on sugar in the hopes that heavy shipment to this country and lower prices would discourage the industry here. This commission was astonished at the fine quality of beets that were being produced for existing factories in our western states, and laid great stress on the fact that there are a great number of sections in the United States where the industry has a much better prospect than in Germany, because with early and late crops the factories can be operated for a much longer time than they can be worked in Germany."

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

Berlin Office, 23 Charlotten Strasse.
London Office, 137 Cheapside, E. C.
Melbourne Office, 231 Flinders Lane.
Paris Office, 20 Boulevard Montmartre.

TERMS: $5.00 PER YEAR IN ADVANCE:
SINGLE COPIES 10 CENTS.
Remit by Express Money Order, Draft, P. O. Order or Registered Letter.

Communications regarding editorial matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 19, 1896.

Two circumstances have given the result of the election in Maine an unusual degree of interest. One is the fact that the greenback craze made considerable headway there at one time, from which the inference was drawn that in that state, if anywhere in the east, the silver movement might be expected to present a favorable showing. The other circumstance which lent interest to the Maine result was the fact that the candidate for the vice-presidency on the Chicago ticket was named from that state. The result has been discouraging to the silver advocates. The Republican candidate for governor carried the election by a plurality of over 48,000. This plurality is the largest ever received by a candidate for governor in the state. Perhaps the most significant circumstance connected with the election is the fact that the total vote for the free-silver candidate for governor shows a marked falling off as compared with the vote for Democratic candidates in former years, and is, in fact, but a little more than half the vote cast for the Democratic ticket in 1888.

Anything more pitiable than the exhibitions made of themselves by the "regular" Democratic conventions in the states of Pennsylvania, New Jersey and New York recently can scarcely be imagined. In each state the conventions lately held have stultified themselves and the party by declaring their earnest indorsement of doctrines in relation to the monetary issue which earlier in the year they repudiated in the most emphatic terms. In Pennsylvania, for example, the convention which met at the end of April declared itself in favor of a firm, unvarying maintenance of the gold standard, and while favoring the most liberal use of silver consistent with the enforcement of a gold standard, absolutely opposed to the free coinage of silver and to the compulsory purchase of silver bullion by the government, and to all devices and schemes for the debasement of our currency, and to all evasions and compromises of a question so closely affecting individual and national credit and honor. At the convention held at Harrisburg on the 10th inst. the representatives of the same party heartily indorsed the platform adopted at Chicago, "particularly that plank in favor of the free and unlimited coinage of both silver and gold at the ratio of 16 to 1." Certainly self-stultification by a party could no further go.

The action taken by the New York convention at Buffalo was almost equally absurd and pitiable. The convention at Saratoga in June last adopted a declaration in favor of sound money and against independent free and unlimited coinage by the United States. The Buffalo convention adopted as the first plank in its platform an unreserved indorsement of the platform framed at Chicago, declaring in addition as its deliberate judgment that "never in the history of the Democratic party has a platform been written which embodied more completely the interests of the whole people as distinguished from those who seek legislation for private benefit than that given to the country by the National Democratic Convention of 1896." In pursuance of a supposed policy of compromise the convention nominated for governor the chairman of the Saratoga convention, who is understood to be a sound money man, but who is apparently willing to run for office on any sort of platform. No one professes to regard the action of this convention as representing the views of the bulk of the Democratic party of the state on the money question, the sole idea of the politicians who engineered it having been to maintain at whatever sacrifice of consistency the prestige of regularity for their organization.

The committee appointed by the two houses of Congress to investigate all matters relating to the use of alcohol in manufactures and the arts free of tax found it necessary, as the basis of investigation in this country, to obtain complete and specific information as to the laws in foreign countries which permit the use of alcohol for such purposes without tax, and the methods of administering such laws so as to prevent frauds on the revenue. The expert appointed by the committee to make such investigation has just returned from abroad, having thoroughly examined the operation of such laws in England, Belgium, Germany, Switzerland and other countries and secured a mass of detailed information, which is now being digested and prepared by Senator Platt, with the special expert and the experts of the Finance Committee, for publication. The committee is also engaged in ascertaining the volume of alcohol used in manufactures and the arts in this country, and in gathering information as to such use by various trades. Later the members will meet to hear oral testimony of experts and others bearing upon the subject. The investigations already made show, it is said, that foreign laws upon this subject are administered in a way which practically prevents fraud, and it is believed that such laws can also be framed and administered in the United States.

In his address before the Canadian Bankers' Association recently, President Fyshe said that the past year in Canada had been one of anxiety to bankers as well as to business men generally. After a review of the situation in the business and financial world, both within and without the Dominion, he declared that there are too many banks in the country, and that the competition between them has made credit so cheap that the pushing, ambitious and impecunious trader has largely taken the place of the cautious, conservative one, who had something to lose, "with the result that we have probably more failures than any other civilized country, and an increasing proportion of them. While the number of traders in Canada in proportion to the population is about the same as in the United States, the proportion of failures to the total number is very much larger in Canada." In illustration of the point that the cheapness of credit has forced into existence an impecunious and feeble class of business men, Mr. Fyshe cited statistics from BRADSTREET'S to show the respective percentages of failures arising from the different classified causes. Under the heading of lack of capital, it appeared that while the percentage in the United States fell from 37.9 per cent. in 1890 to 33.2 in 1895, the percentage in Canada increased from 55.8 per cent. in 1890 to 71.3 per cent. in 1895. Mr. Fyshe said that until a more settled condition of things is brought about in the United States, there is likely to be trouble, and apprehension of trouble, in Canada, as the Dominion cannot fail to suffer from the disturbed condition of affairs in the United States.

According to the annual message of President Diaz, just read to the Mexican Congress, the government received during the last fiscal year cash revenue amounting to $50,000,000, the largest annual revenue yet reported. The year closed on June 30 with a surplus of $4,500,000, which has since been increased to $6,000,000. The mining industry in Mexico has made remarkable progress, as shown not only by the large number of grants, but by the returns of the exports of the precious metals, which during the first nine months of the fiscal year ended June 30 amounted to $50,868,000, against $38,300,000 in the corresponding period of the preceding year. President Diaz refers to the convention concluded at Washington in May last, whereby the International Water Boundary Commission between Mexico and the United States was empowered to study certain questions bearing on the distribution of the waters of the Bravo, or Grande, river. The water boundary commission has settled two grave questions of disputed territory arising from changes in the bed of the Rio Grande, one relating to the Chamisla tract, and the other regarding the San Elizario islet.

The situation on the Bosphorus has not cleared up during the week. Continental jealousy of British influence has seemingly tied the hands of England, with the result that no decisive outcome of the situation is in sight. The position of the British government is declared in a semi-official communication which is printed prominently in the columns of the daily press. This communication sets forth that in view of the great anti-English outburst in the European press the British government wishes it to be understood that its policy is unchanged. It is acting in complete accord with the other powers, as hitherto. Sir Philip Currie, the British ambassador to Turkey, daily confers with the other diplomats in Constantinople.

The Association of Chambers of Commerce of the United Kingdom, which met at Southampton this week, adopted, among others, a resolution declaring that the time has now arrived when the government may properly consider the desirability of appointing competent officers to the more important colonies for the purpose of reporting on their agricultural, commercial, mineral and industrial development, such officers to be paid out of imperial funds. It also adopted resolutions declaring that, in view of the danger incurred by traders supplying materials to manufacturers holding machinery on the hire and purchase system, owing to the impossibility of ascertaining the existence of such a prior claim, it is highly desirable, in the interests of honorable firms, that all agreements on such terms for power machinery to be used in mills should be registered in the same manner as bills of sale; that the practice of mortgaging book debts to cover cash advances constitutes a serious danger to legitimate trading, and that assignments of book debts should be registered after the manner of bills of sale; advocating railway extension in India; urging upon the telegraph department of the government the necessity of promptly increasing or improving the main cable connections between mercantile centers, and requesting the executive council to use every opportunity of urging upon the government the compulsory adoption of the metric system of weights and measures.

THG GOLD INFLOW.

Further engagements of gold on a large scale have been the feature of the financial situation this week. The total movement, both the amount already received and the sums engaged in London and Paris and in transit to this side, now reaches the imposing aggregate of $36,000,000, of which up to date about $26,700,000 has already reached this country. The movement, therefore, ranks in volume with the largest of its kind within recent years, and is, moreover, noticeable from the fact that it has all taken place within a month, the first engagements of specie in London having been made on Wednesday, August 19.

It is gratifying to note that there is nothing in the condition of the exchange market at present to negative the presumption that the inflow will continue for some time to come. Indeed, the London financial press, which at first attributed the movement of gold hither to the manipulation of the so-called bankers' syndicate, has changed its tone, and shows a disposition to concede the fact that it is natural and healthy, and, furthermore, to profess uncertainty as to the probable amount of gold that London and Paris will have to surrender before the requirements here in connection with the condition of exchange are fully satisfied. The August foreign trade statement issued by the Treasury Department on Wednesday last, indeed, presents an explanation of the movement, the fact that the excess of exports over imports in the eight months ending August 31 attained a value of nearly $100,000,000, and indicates a change for the better in our foreign trade of some $136,000,000, being calculated to set at rest any doubts as to the entirely legitimate character of the gold-shipping transactions.

There were two features of special interest in connection with exchange and the gold movement this week. The most important of these was the action of the Bank of England on Thursday. Contrary to expectations, both here and abroad, its minimum discount rate was not raised, but remained at 2½ per cent. In spite of the loss of £500,000 in specie, mainly on withdrawals for American account, the bank's gold is still $42,146,000, and it would seem to have been recognized that the extended speculation in consols, "home rails" and other high-priced securities in the London stock market, which had been fostered by the abundance and cheapness of money in London during the past two years, made any further disturbance of rates and a corresponding unsettling of the open market highly inadvisable. The open market rate at London, which had advanced to 2 per cent., receded to 1¾@ 1⅞ per cent. for discounts, and the effect of harder money in London has apparently been to attract funds from the continent. The other feature of the general situation, which, presumably, was not without its effect on the action of the Bank of England, is that the demand for gold for this country has been largely transferred to Paris. The first symptom of this was an advance in sterling rates at the French capital, and the announcement that $3,500,000 had been withdrawn there for shipment thither was followed by the intelligence that the Bank of France was selling eagles at a fraction under the price fixed by the Bank of England for American coin. It is also noticeable that the weekly statement of the Bank of France shows a loss of 14,500,000 francs in gold, which is attributable to this American demand. Further gold withdrawals to the amount of £100,000 have been made in London since the Bank of England rate was left unchanged, but Paris has supplied the bulk of the gold intended to be shipped to this country during the week, and the drain is considered likely to center there till the exchange market between it and London changes or the Bank of France takes some tangible step to check it.

It was stated in these columns last week that the Treasury gold reserves had increased under deposits of specie in exchange for legal tenders and Treasury notes to $112,000,000. This did not appear in the official statements for a day or so, but was verified by last Monday's statement of the Treasury. Since then further deposits have continued, and at the close of the week the Treasury free gold fund is close upon $117,000,000, indicating that of the total gold received from abroad in less than a month $16,000,000 has already found its way into the government vaults.

FOREIGN TRADE STATISTICS FOR EIGHT MONTHS.

The exports of merchandise for the month of August, as given in the preliminary Treasury statistics for the eight months ending therewith, were valued at $68,652,667, which represents an increase of over $12,600,000 as compared with the corresponding month of last year. The imports for the month were valued at $49,458,325, which represents a decrease of over $21,600,000 as compared with August, 1895. In August last year the free-of-duty and dutiable imports about balanced each other, whereas in August, 1896, the dutiable imports were over $8,000,000 in excess of those free of duty. During the month of August the exports showed an excess over the imports of $19,194,342, whereas in August, 1895, there was an excess of imports of $15,131,324.

For the eight months ending with August the exports were valued at $570,982,453, which represents an increase of over $71,500,000 as compared with the corresponding eight months of 1895. The imports were valued at $471,222,434, which represents a decrease of over $64,500,000 as compared with the corresponding eight months of 1895. For both periods the dutiable imports exceeded those free of duty in value, but, whereas the excess amounted to only about $26,800,000 in 1895, the excess in eight months of 1896 amounted to over $42,600,000. The dutiable imports for the eight months were valued at $256,958,763, while those free of duty were valued at $214,263,671. In the eight months ending with August in 1895 the imports showed an excess of $36,350,416, whereas for the corresponding eight months of this year the balance was heavily on the other side, the excess of exports amounting to $99,760,019.

Of the four leading classes of exports, namely, breadstuffs, cotton, mineral oils and provisions, all, except cotton, show increases for the eight months' period as compared with the corresponding period of last year. The breadstuffs exports show an increase of over $22,000,000 in value, mineral oils show an increase of over $6,300,000, and provisions show an iucrease of over $6,500,000 in value; cotton exports, on the other hand, show a decrease of over $6,500,000.

In August, 1895, exports of gold coin and bullion were a feature, the excess of exports over imports of that metal for the month amounting to $15,133,175. In August, 1896, the imports showed an excess which amounted to $2,073,341. The exports for the month were only $1,972,544, as compared with $16,667,261 in August, 1895, while the imports amounted to $4,045,885, as compared with $1,534,086 in August last year. For the eight months ending with August the exports of gold coin and bullion show a striking correspondence with those for the like period of 1895, the total for the eight months of 1896 being $55,511,811, as compared with $55,766,217 in the eight months of 1895. The imports for the eight months ending with August this year amounted to $30,718,510, as compared with $28,090,483 in the eight months of 1895. For both periods, as will be seen, the exports showed an excess, the excess amounting to $24,793,301 in the eight months ending with August, 1896, as compared with $27,675,734 in the eight months ending with August, 1895. The movement of ore was comparatively trifling. There was an excess of imports amounting to $1,091,945 for the eight months ending with August, 1896, as compared with a like excess of $811,408 in the eight months ending with August, 1895.

The exports of silver coin and bullion for the month of August were valued at $5,301,434, which represents an increase of over $700,000 as compared with August, 1895. The imports for August this year amounted to $929,422, which represents a decrease of nearly $200,000 as compared with August last year. During both months the exports, as will be seen, showed an excess over the imports, the excess amounting to $4,372,012 in August, 1896, as compared with an excess of $3,439,021 in August, 1895. For the eight months' period the exports of silver coin and bullion amounted to $40,932,418, which represents an excess of over $7,600,000 as compared with the corresponding eight months' period of last year. The imports were valued at $7,712,959, which represents an increase of over $1,500,000 as compared with the eight months ending with August last year. For both periods the exports show a marked excess, that for the eight months of this year amounting to $33,219,459, an increase of over $6,100,000 as compared with the corresponding period of last year. Exports of silver ore for the eight months' period were insignificant, being valued at only $370,575, as compared with $61,920 in the correspond eight months of last year. The imports, on the other hand, were valued at $12,003,963, as compared with $8,145,486 in the eight months of 1895.

HOW THE PARITY IS MAINTAINED.

There has never been any doubt in the mind of anybody who has been in sympathy with the position of the present administration on the monetary question that if it were necessary to redeem silver dollars or their paper representatives in gold in order to maintain the parity between the two metals, such redemption would be made. The conditions of the present campaign, however, render of particular interest such a distinct and emphatic statement of the position of the administration as is contained in the letter of Secretary Carlisle, made public this week. This letter of the head of the Treasury Department was written in response to a correspondent who asked how the silver dollars, which contain a quantity of bullion commercially worth only about 53 cents each, are maintained at a parity with gold, notwithstanding the fact that the government does not directly redeem them or the certificates issued upon them in gold. It appears that a great many inquiries upon the same subject are addressed to the Secretary from different parts of the country, and he has taken this occasion to answer them all at once.

Mr. Carlisle recalls the fact that all the standard silver dollars issued from the mints since the passage of the act of 1878, now amounting to more than $433,000,000, have been coined on public account from bullion purchased by the government, and are legal tender in payment of all debts, public and private, without regard to the amount, except when otherwise expressly stipulated in the contract between the parties. They belong to the government when coined, and they are paid out by the government at a parity with gold for property and services of all kinds, and received from the people at a parity with gold in the payment of all public dues and demands. The government has made no discrimination whatever between the coins of the two metals, gold having been paid on its coin obligations when gold was demanded, and silver having been paid when silver was demanded. Under this policy, the Secretary points out, the coinage has been so limited by law and the policy of the Treasury Department that the amount coined has not become so great as to drive the more valuable coin, gold, out of use, and thus destroy the basis of our monetary system; and he declares that so long as the two metals are of unequal commercial value, at the ratio established by law, this limitation upon the coinage is a measure absolutely essential to the maintenance of their parity in effecting exchanges. It constitutes, he says, the principal safeguard for the protection of our currency against the depreciation which the experience of all conntries has shown would otherwise result from the attempt to use legal-tender coins of the same denomination but of unequal value.

If, now, this limitation were removed, the Secretary says, confidence in the ability of the government to preserve equality in the exchangeable value of the coins would be destroyed, and the parity would be lost long before the amount of silver coinage had become really excessive. With free and unlimited coinage of silver on account of private individuals and corporations, the government would be under no moral obligation to maintain the parity, and, moreover, it would be unable to do so, because the volume of overvalued silver forced into the circulation by a legal-tender provision would soon expel gold from the country, or put such a premium upon it that it would be impossible to procure and hold in the Treasury a sufficient amount to provide for the redemption of silver on presentation. In order to maintain the parity under such conditions, the Secretary says, the government would be compelled from the beginning to exchange gold for silver dollars and their paper representatives whenever demanded, just as it now exchanges gold for its own notes when demanded; and as the coinage of silver dollars would be unlimited, and, therefore, constantly increasing, a point would soon be reached where it would be impossible to continue the process of redemption.

At this point he directs attention to the fact that the implied obligation of the government to preserve the value of the money which it coins from its own bullion and for

its own use, and which it forces its citizens to receive in exchange for their property and services, has been supplemented by two statutory declarations which substantially pledge the public faith to the maintenance of that policy. These are the act of July 14, 1890, which, after providing that the Secretary of the Treasury should, under such regulations as he might prescribe, redeem the Treasury notes issued in the purchase of silver bullion, in gold or silver coin, at his discretion, declares that it is "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law," and the act of November 1, 1893, which again declares it to be "the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity of value of the coins of the two metals, and the equal power of every dollar at all times in the market and in the payment of debts."

Relying on these assurances, the Secretary continues, the people have received these coins and have relied confidently upon the good faith of their government, and the confidence thus inspired has been a most potent factor in the maintenance of the parity. The public has been satisfied that, so long as our present monetary system is preserved, the government will do whatever its moral obligations and express declarations require it to do, and very largely as a consequence of this confidence in the good faith of the executive authorities, the silver coins have not depreciated in value. It is not doubted, Mr. Carlisle continues, that whatever can be lawfully done to maintain equality in the exchangeable value of the two metals will be done whenever it becomes necessary, and, although silver dollars and silver certificates have not, up to the present time, been received in exchange for gold, yet, if the time shall ever come when the parity cannot be otherwise maintained, such exchanges will be made. It is, he says, the duty of the Secretary of the Treasury and of all other public officials to execute in good faith the policy declared by Congress, and whenever he shall be satisfied that the silver dollar cannot be kept equal in purchasing power with the gold dollar, except by receiving it in exchange for the gold dollar when such exchange is demanded, it will be his duty to adopt that course. This emphatic statement of the position of the Treasury Department under the existing administration shows that there has been no break up to the present, and that there will be none while it remains in office, in the policy which has kept the two metals at a parity in our currency during the period since the passage of the Bland-Allison act.

THE NEW HAVEN REPORT.

President Clark, of the New York, New Haven & Hartford road, in the remarks accompanying the preliminary annual report of his company, which was made public this week, states emphatically that there is no apprehension on the part of the management of the company of decreasing earnings or reduced dividends, and adds that no regrets are felt by those intrusted with the care of the property that such large expenditures have been made upon it. In fact, he points out that this very outlay was for the purpose of increasing its facilities and enabling the road to do business satisfactorily and economically. It may be inferred that the management take the same view with regard to the large increase in the capitalization of the corporation. The latter has grown from $15,500,000 stock in 1888 to $47,745,700 at the close of the fiscal year ending June 30, while the mileage, which at the date first mentioned was 508 miles, is now 1,451 miles, not including the 560 miles of the New York & New England system, which is controlled but operated separately. The growth of the Consolidated in mileage and in capital during the past eight years has been indeed remarkable, particularly in the case of an eastern road. It must, however, be considered that in this process of consolidation the principal of increased economy and better facilities has been kept steadily in view, while not a small proportion of the augmented capitalization represents expenditures made necessary to modernize the main line and branches.

The justification of President Clark's remarks upon the present situation and prospects of the "Consolidated" is found in the figures giving the earnings and expenditures of the system for the year ending June 30 last, which compare as follows with the corresponding items for the year before:

Year ending June 30.	1896.	1895.	*Changes.*	
Gross earnings	$30,345,630	$27,608,009	Inc.	$2,737,621
Operating expenses	21,137,226	19,064,028	Inc.	2,073,198
Net earnings	$9,208,404	$8,543,981	Inc.	$664,423
Other income	855,685	528,552	Inc.	327,133
Total	$10,064,089	$9,072,533	Inc.	$991,556
Charges	6,397,197	5,593,545	Inc.	803,652
Balance	$3,666,892	$3,478,988	Inc.	$187,904
Dividends	3,608,542	3,608,542	Inc.	....
Surplus	$58,350	def. $129,554	Inc.	$187,904

These comparisons are in every way satisfactory, though the results may be taken as representing in a considerable degree the better conditions which prevailed during the summer and autumn of 1895. How far the present depression of business may duplicate the unfavorable results of the year 1894–95 remains to be seen, and it can doubtless be argued that a renewed improvement may be expected after the present political and currency agitation is ended by the coming election.

Reference is made in the report to several matters of interest in connection with the affairs of the company. One of them is the new station and terminals in Boston. On this point it is stated that the demoralized condition of the money market has seriously interfered with the progress of the improvement, but that it is hoped to complete the work in 1897. Another matter of general interest is the experiment with electricity as a motive power, in the use of which for the purposes of companies of this character the New Haven was a pioneer, the application of electric power to the Nantasket branch of the Old Colony division of the system being one of the very first attempts of that character. The results, the report declares, have been a surprise even to experts, and it is probable that in the near future similar installations will be made at various points on the company's lines, and short branches to centers of business and population constructed, equipped and operated by electricity. One of the most important improvements on the main stem is the rectification of the line and elimination of grade crossings at Bridgeport, Conn. This work, which is one of considerable magnitude and which involves no little expense, remains to be completed, and the explanation is offered that there are still certain legal obstacles which must be adjusted before a contract can be made for the completion of the improvement as a whole.

CAUSES OF THE DEFICIENCY OF THE REVENUE.

To the Editor of BRADSTREET'S:

It is much to be regretted that under the present emergency, when the opponents of a high tariff are even ready to vote the Republican ticket with Mr. William McKinley at the head, the leaders of that party should repel their aid by imputing the present dangerous conditions to mere changes of administration or to changes in the tariff policy subsequently to the panic of 1893, to which no business man of any repute or experience would give any considerable importance in a serious discussion of the events of recent years, which have culminated in our present disastrous condition; but since a lack of discretion has become apparent on the part of many persons, it becomes almost a duty for some one to audit the national accounts and to bring out the facts. It would be well for indiscreet persons to keep one axiom in mind: "Figures never lie except when liars make figures."

In the subsequent statement I have made a trial balance or account current from the figures of our national accounts, to which no man can take exception. I have put the case in so plain a way that if one party has been more guilty than another that fact may be proved. My purpose has been to ignore party divisions, and to let the figures and the facts which this statement may disclose speak for themselves, whoever may gain credit or suffer discredit therefrom.

In treating the different periods it is not only convenient but right to assume that the financial record of each administration is carried over the 4th of March, when the political year ends, and may be concluded with the end of each fiscal year on the ensuing June 30th. When naming separate administrations in the subsequent table it will therefore be assumed that their terms correspond to four fiscal years, each ending June 30th, rather than to the political years ending March 4th; but in order to place the responsibility where it belongs, each reader must find out for himself with what party the responsibility for the legislation of each term rests. It is necessary that the cause and source of the recent deficiency in revenue should be traced to the Congress or administration with whom the responsibility should be put.

The second term of the administration of President Grant ended in 1877. During that term the present unit of value, a dollar made of gold, which had been the single standard since 1834, was finally established by law. This act was passed after long and repeated debates beginning in 1870, and its purpose to maintain the single gold unit of value was very fully and ably explained by Senator William M. Stewart, of Nevada. In 1874 President Grant stopped the greenback inflation by his noted veto message. In 1875 the Resumption act was passed, authorizing and directing the sale of the United States bonds for coin in order that resumption might become possible. Under that act the bonds of the United States have lately been sold for gold in order to maintain the parity of all outstanding obligations of the government under the mandate of existing laws.

In 1878 the so-called Bland act for the purchase of silver bullion, with money raised by means of a forced loan, was passed over the veto of President Hayes. In that act, for the first time in our financial history, the law declares that the silver dollars coined under its provisions shall be a legal tender for their "nominal value." I have used the term forced loan advisedly. When a government issues its promise to pay money on demand, making that promise a legal tender, the act is in effect the collection of a forced loan. The purpose of the legal tender acts of 1861–62 was the collection of a forced loan for the conduct of the war. The purpose of the Bland and Sherman acts was the collection of a forced loan for the purchase of silver bullion.

In 1879, January 1, specie payment was resumed on the gold standard. In 1881 the administration of Presidents Garfield and Arthur succeeded that of President Hayes. The revenue was abundant; the expenditures per capita were rapidly diminished.

In 1885 the first administration of President Cleveland came in. The revenue continued ample; the expenditures during that four years were reduced to the lowest average since the end of the civil war. They were:

In 1886	$4.23 per capita.
In 1887	4.56 per capita.
In 1888	4.33 per capita.
In 1889	4.60 per capita.

On the 30th of June, 1889, the last fiscal year of President Cleveland's administration ended. The cash in the Treasury consisted of the following items, the subsidiary coin in the Treasury not being counted as available cash:

ASSETS AND LIABILITIES OF THE TREASURY IN EXCESS OF CERTIFICATES AND TREASURY NOTES OUTSTANDING.

Assets.	*June* 30, 1889.
Gold	$126,711,561
Silver dollars and bullion	32,615,930
Fractional silver coin	25,179,733
United States notes	29,121,085
National bank notes	4,158,331
Minor coin	226,062
Deposits in banks	47,432,377
Total cash assets	$325,395,079
Liabilities.	
Bank note 5 per cent. fund	$5,630,132
Outstanding checks and drafts	2,898,198
Disbursing officers' balances	24,753,118
Post Office Department account Undistributed assets of failed national banks District of Columbia account	5,731,020
Total agency account	$[illegible]
Gold reserve	[illegible]
Net balance	[illegible]
Total liabilities	$325,395,079
Bonds and interest paid	698,407

Office of the Treasurer U. S.

In 1889 the administration of President Harrison succeeded that of President Cleveland. In 1890 the so-called McKinley tariff was passed for the declared purpose of reducing the revenue, which purpose was mainly secured by removing the duties on sugar, which had previously yielded ninety cents per head, and in the previous year over $50,000,000. In that and other years of this administration other acts were passed very greatly increasing the expenditures of the government. In 1890 the Sherman act was also passed, increasing the forced loan for the purchase of silver bullion to the sum needed for buying 4,500,000 ounces per month. Under that act the national debt due on demand was increased $155,931,002.

The last fiscal year of the Harrison administration ended June 30, 1893. For several months the danger of the deficiency caused by the legislation of 1890 had become apparent. It was avoided by turning over the legal tender notes, $54,207,975.75, previously held as a separate trust for the redemption of bank notes on which bonds had been surrendered, and by counting $11,855,944 subsidiary coin to the Treasury as available cash. At the same time, lest this and other devices should not suffice to cover the existing deficiency, bonds were ordered to be printed ready to be sold under

the Resumption act of 1875. On the 30th of June, 1893, the cash in the Treasury consisted of the following items:

ASSETS AND LIABILITIES OF THE TREASURY IN EXCESS OF CERTIFICATES AND TREASURY NOTES OUTSTANDING.

Assets.	*June* 30, 1893.
Gold	$95,485,414
Silver dollars and bullion	6,797,135
Fractional silver coin	11,855,944
United States notes	13,870,333
Treasury notes of 1890	6,528,533
National bank notes	3,982,733
Minor coin	604,332
Deposits in banks	16,693,221
Total cash assets	$155,217,645
Liabilities.	
Bank note 5 per cent. fund	$5,971,102
Outstanding checks and drafts	3,206,182
Disbursing officers' balances	24,240,952
Post Office Department account, Undistributed assets of failed national banks, District of Columbia account	4,570,156
Total agency account	$37,988,392
Gold reserve	95,485,414
Net balance	21,743,839
Total liabilities	$155,217,645
Bonds and interest paid	5,233,037

Office of the Treasurer U. S.

The second administration of President Cleveland succeeded that of President Harrison in 1893 under the conditions of a depleted Treasury, heavily increased annual expenditures and large unfulfilled contracts. Under the mandatory provisions of the Sherman act of 1890 the duty was imposed upon the Secretary of the Treasury to maintain all obligations of the government at a parity at the existing legal ratio of silver to gold, which made it necessary to redeem all the notes and certificates issued under the Bland and Sherman acts in gold; the same Congress had deprived the Treasury of the means of meeting these obligations from current revenue.

The forced loans by which the national debt due on demand had been increased, amounting to $464,210,262.96, were as follows:

Under the Bland act 291,272,018.56 fine ounces of silver had been bought at an average of $1.0583 per ounce	$308,279,260.71
Under the Sherman act 168,674,682.53 fine ounces of silver had been bought at an average of $0.9244 per ounce	155,931,702.25
Total 459,946,701.09 fine ounces at $1.0093 per ounce	$464,210,262.96

The public keeps between fifty and sixty million silver dollars in circulation which must also be maintained at a parity with gold.

On the 30th of June, 1896, notes of the government, or silver certificates standing for a part of this debt, were in the Treasury as follows:

Silver certificates	$10,629,424
Treasury notes, 1890	33,304,774
United States notes, 1861–62	121,118,261
Total	$165,052,459

But under existing laws these paid notes are counted as cash subject to be reissued, and must be reissued from time to time under existing laws.

The whole danger and difficulty of the present situation grows out of the provisions of the law making it mandatory upon the Secretary of the Treasury to collect from time to time a new forced loan by the reissue of the United States notes of 1861–62 and the Treasury notes of 1890. A note paid or redeemed represents so much debt extinguished. The reissue of such notes is not a continuation of a former loan; it is the collection of a new forced loan in time of peace for an entirely different purpose from that originally contemplated in the law. The collection of a forced loan under the acts of 1861–62 has never been justified except for war purposes. The collection of a forced loan for the purchase of silver bullion under the Bland and Sherman acts can never be justified, while the reissue of these notes must be absolutely condemned. There will be no safety or stability in the monetary system of this country until every note paid or redeemed by the United States is canceled and destroyed.

The bearing of these facts can only be made plain by dealing with them at so many dollars per head of population. The great changes in fiscal legislation under the acts of 1890 did not seriously affect either revenue or expenditure until the fiscal year ending June 30, 1891.

Dealing, therefore, with the period subsequent to the resumption of specie payment under the judicious management of the several secretaries of the Treasury under Presidents Hayes, Garfield and Arthur, and Cleveland (first term), it appears that the average revenues per head were as follows, eleven years, 1879 to 1890, inclusive:

From liquors and tobacco	$2.47
Sugar	.90
Miscellaneous receipts	.44
Miscellaneous duties and small internal taxes other than on liquors and tobacco	2.66
An average (per head)	$6.47
The expenditures for the normal cost of government during this period for everything except pensions and interest	$4.44
Interest and pensions	.30
Total	$4.74
Surplus revenue	1.73
	$6.47

The sum of the surplus available for the reduction of the debt, or for addition to cash in the Treasury, was $1,148,702,167, or over $100,000,000 a year.

In the subsequent five years, from 1891 to 1895, the revenues were as follows:

1891	$6.13 per capita
1892	5.42 per capita
1893	5.77 per capita
1894	4.36 per capita
1895	4.49 per capita
Average	$5.22 per capita

The expenditures were as follows:

1891	$5.55 per capita
1892	5.27 per capita
1893	5.73 yer capita
1894	5.39 per capita
1895	5.11 per capita
Average	$5.40 per capita

The purposes of the expenditures were as follows:

For the normal cost of government, everything except interest and pensions	$2.87
Interest and pensions	2.53
Total	$5.40
Deficiency	.18

Amount of deficiency $64,012,594 to June 30, 1895.

The evil influence of the panic of 1893 and the paralysis of trade which ensued was quickly disclosed by the falling off in the revenue of the government.

Under the first administration of President Cleveland, ending June 30, 1889, the average expenditures were $4.43, and during the administration of President Harrison the expenditures were $5.31 per head. Increase, eighty-eight cents per head, amounting to over $50,000,000 per annum.

Under the act for reducing the revenue of 1890 the revenue tax on sugar was removed, which for the previous eleven years had yielded ninety cents per head. It has lately been in part restored, but the net loss of revenue from this single source for five years, 1891 to 1895, was seventy-five cents per head: Average population, sixty-six million (66,000,000); total for five years, three hundred and thirty million (330,000,000); total loss of revenue, two hundred and forty-seven million eight hundred thousand dollars ($247,800,000).

The increase of expenditure under the Harrison administration has been stated, namely, eighty-eight cents per head. We will, however, compute the difference under that administration, from 1891 to 1893, and under the second Cleveland administration, for 1894 and 1895, burdened as it was by the acts of 1890, at the average excess only over the eleven years of Hayes, Arthur and Cleveland (first term), to wit, sixty-six cents; which rate being assessed upon a population of three hundred and thirty million (330,000,000) equals two hundred and seventeen million, eight hundred thousand dollars ($217,800,000).

It thus appears that the loss of revenue from sugar under the act of 1890 amounted to four times the deficiency between 1891 and 1895, while the increase of expenditures under the acts of 1890 amounted to more than three times the deficiency. The total effect of the acts of 1890 in loss of revenue and increase of expenditure amounted to four hundred and sixty-five million three hundred thousand dollars ($465,300,000); deducting the deficiency of sixty-four million dollars ($64,000,000) in this period, since increased, we find the loss in debt-paying power mainly due to the legislation of 1890 to have been in excess of four hundred million dollars ($400,000,000) in five fiscal years, 1891 to 1895, inclusive.

The acts of 1894 were intended to remedy these evils, and, except for the decision of the Supreme Court upon the income tax, it is manifest that there would have been little or no deficiency even after the panic of 1893 had been brought on by the danger of the debasement of the standard of value to a silver basis.

The exact data of the fiscal year ending June 30, 1896, are not at hand. The total amount of revenue was $326,976, 200.38 on a population at the beginning of the year computed at 69,753,000; per capita, $4.69. The total amount of expenditures was $352,179,446.08; per capita, $5.05; deficiency, $25,203,245.70—the tendency now being to an increase of revenue per capita and to a reduction of per capita expenditures. The figures of this seventeenth year confirm the rule developed in the previous sixteen years, namely, that the normal revenue from liquors and tobacco, domestic and foreign, suffices to cover all normal expenditures, other revenue being needed only to cover pensions and interest.

Objection has been taken to the tariff of 1894 as not sufficing to yield the revenue required for these purposes. This calls attention to the fact that the committee charged by Congress with the duty of preparing fiscal measures is usually very apt in finding the ways of expending money and very inapt in providing the means.

It will be observed that the effect of the acts of 1890 was such that no rapid reduction in the per capita expenditure could be made until after the year 1893. This was partly due to increased appropriations for various purposes and to long contracts, also to the refund of direct taxes, also to the payment of sugar bounties to the extent of over thirty million dollars ($30,000,000), and other lavish disbursements. Could these expenditures have been reduced in 1896 to the average of President Hayes', Arthur's and President Cleveland's first term, namely, $4.66 per head in place of $5.05, the difference of 39 cents assessed on the population at the beginning of the year, a fraction under 70,000,000, amounts to over twenty-seven million dollars ($27,000,000), or a sum larger than the deficiency of the year ending June 30, 1896. This proves that under the existing laws, including the tariff act of 1894, a sufficient revenue had been yielded, even in a year of very restricted commerce, to meet all the necessary expenses of the government when economically administered. Under normal conditions of trade there would have been a considerable surplus.

The total deficiency of revenue from 1893 to June 30, 1896, has been $137,811,729.46. That is the sum by which the national debt has been increased. There has been a large excess of interest-bearing bonds during this period by which it is sometimes affirmed that the debt has been increased to that full amount, but this is not the fact. About one-half of the bonds bearing interest have of necessity been issued in order to protect the gold reserve and to keep the cash in the Treasury adequate for all contingencies. The proceeds are now held in the Treasury either in gold or in the notes of the government and other balances which are counted as cash.

The per capita deficiency for the three years has been exactly 66 cents, which is the exact measure of the difference between the average expenditures of President Hayes', Arthur's and President Cleveland's first term and the expenditures under President Harrison and a part of President Cleveland's second term in which the acts of 1890 were in force.

Had the expenditures of the government economically administered been kept down to the amount which amply sufficed in the first period there would have been no deficiency of revenue even from 1893 to 1896. When the attention of the people is given to the real cause of deficiency, namely, lavish expenditures, we shall not hear so much talk about faults in revenue measures.

Such are the facts developed by figures which have been verified in Washington before being put into the present form of statement. Every business man can draw his own conclusion from this statement.

It will be remarked that for seventeen years the average revenue derived from duties on imports other than liquors and tobacco has varied but a fraction from $2.50 per head. The question at issue on the tariff is measured by that sum. The true issue in framing an act for the collection of duties upon imports other than liquors and tobacco is how to collect two dollars and a half ($2.50) per head in such a manner that all taxes that the people pay the government shall receive. When this work is undertaken, governed by a rule that this revenue of $2.50 per head shall be secured with the least interference with the freely chosen pursuits of the people, the solution will become plain.

One may, perhaps, comprehend how greatly the tariff problem has been exaggerated as a factor in politics by two comparisons. A revenue of $2.50 per head on 72,000,000 people comes to $180,000,000. The annual fire tax imposed on the people of this country from fire losses and the cost of sustaining insurance companies comes to a larger sum. It is not an important factor in politics. The annual consumption of liquors and tobacco comes to not less than fifteen dollars ($15) per head, of which two dollars and a half ($2.50) is secured by the government as a contribution to the revenue.

EDWARD ATKINSON.

Boston, Mass.

AMERICAN TRADE PROSPECTS ON THE BALTIC.

The following article, written by Mr. Charles E. Currie, special commissioner of the Louisville, Ky., Board of Trade, contains much that is of interest regarding the prospects for the extension of American trade with northern Europe. Mr. Currie, it will be recalled, went to Europe to study this subject as a result of the visit to this country of Consul T. Soegaard, who was sent here by the Department of Foreign Affairs of Denmark for the purpose of interesting Americans in the trade of Denmark and other Baltic countries:

To the Editor of BRADSTREET'S:

SIR—By the term "Baltic territory" is meant

those countries which border directly on the Baltic sea and its branches, as well as those countries which are tributary to the Baltic by reason of direct communication. These countries are Denmark, Norway, Sweden, Finland, Russia, and provinces of Germany and Prussia. This territory comprises some fifty millions of people, who are largely, if not altogether, dependent upon the Baltic as a means of transportation for their imports and exports. The Baltic can very properly be classified as an agricultural country, inasmuch as fully 80 per cent. of its area is devoted to husbandry, the business in the cities being mostly that of trading, though some light manufacturing is engaged in.

Perhaps the most noteworthy exception to this general rule is in the case of Sweden, which country, in the development of its iron and timber resources, engages quite extensively in the manufacturing of machinery, implements and articles of a similar nature. The manufactured products of Sweden, however, are in most cases consumed within her own limits, and therefore that which is exported from that country has no appreciable effect upon the general traffic of the Baltic. Next in importance to the above-mentioned manufacturing industries is that of flour. This branch of industry is quite general through the Baltic, and especially in Norway and Sweden, where the cheap power afforded by mountain streams, together with the cheap labor of the rural districts, has been conducive to the establishing of many small flour mills, the aggregate product of which is consumed at home. Notwithstanding this the import of flour from other countries is very heavy, that from America being large.

Access to the Baltic is afforded by three principal routes, viz., the "sound" at Copenhagen, the railroads and the Kiel Canal. The canal route has only recently been established, and, owing to some obstacles in shipping which have been encountered in the operation of the canal, this route has not as yet become a recognized waterway to the Baltic for the use of merchant vessels.

The railroads, while an important factor in the movement of merchandise, are not in many cases so well adapted to Baltic commerce as the use of vessels. Especially is this the case where vessels are required to discharge from one to another, as it frequently occurs. The railroads attain their highest efficiency when in severe winters many of the Baltic ports are closed because of ice forming in their harbors.

Of the several seaport cities contending for recognition as distributing points to the Baltic there is, perhaps, none presenting in the aggregate more well-founded claims for this important position than the city of Copenhagen. From the earliest days in the history of Baltic commerce Copenhagen has been the acknowledged distributing point. This city is situated on the island of Zealand, one of the many islands forming a portion of the kingdom of Denmark, and occupies a position almost directly opposite the mouth of the Baltic. The peninsula of Jutland (also a portion of Denmark) extends in a northerly direction from the mainland of Germany to a point nearly in line with the southern portion of Norway. This peninsula prevents direct access to the Baltic by water, and vessels bound for that sea are therefore obliged to pass around the northern extremity of Jutland and then proceed south between the east and west coasts respectively of Jutland and Sweden through the sound and to Copenhagen. Owing to this natural arrangement of territory the harbor of Copenhagen is protected from storms and ice, and, there being no tide, it is accessible at all times, thus affording mariners a safe and convenient entrance to the Baltic. There is sufficient water to admit the largest vessels, which eliminates all restrictions as to draft.

In order to handle the local trade and the trade in transit with greater dispatch, Copenhagen has recently built the Free Port at an expense of some ten millions of dollars. The Free Port takes its name from the fact that merchandise discharged within its limits is exempt from the payment of duty as long as the goods remain in the warehouses of the Free Port. If goods discharged at the Free Port are shipped out of Denmark no duty is collected by the Danish government, but if they are to remain in Denmark the duty is collected when they leave the Free Port. This is one of the chief advantages of Copenhagen as a distributing point, as goods for reshipment can be stored in the Free Port at a nominal outlay and forwarded to destination at the most favorable opportunity.

The Free Port issues warehouse receipts which are negotiable at the Copenhagen Bank at 4 per cent. interest for amounts as high as 75 per cent. of their value. A portion of the ground of the Free Port has been set aside to be used by factories desiring to manufacture in the free territory. By manufacturing in the Free Port duty is only paid on what materials are actually used.

The merchants of the Baltic are as a class honorable, enterprising and energetic. I shall speak more particularly with reference to those of Denmark, having had greater opportunity for observing them. These merchants are naturally the importers of the country, since all goods going to the Baltic from Denmark must be shipped into that country, owing to the fact that but few manufacturing industries exist in Denmark. The importers can be divided into two distinct classes, the very wealthy houses and the houses of moderate means. The long standing of many of these business houses is one of the most conclusive arguments which can be offered in support of a claim for their business integrity and conservative methods. Many of these firms have been in existence for seventy-five to one hundred years, and, in some cases, much longer. While in Denmark the writer personally witnessed the celebration of a firm which had just completed the two-hundredth year of its existence, and during that time the business had never passed out of the possession of the family which had founded it. The general method of distribution is for the importer to sell to the retailer, who in turn supplies the consumer.

The methods of transacting business with the merchants on the Baltic do not represent any new features as compared with the methods in use in America. The plan of outright sale and consignment plan are both employed. These two plans are used promiscuously by both classes of merchants referred to, the moderate class houses resorting to the consignment plan more frequently, of course, than the wealthy class. The fact of the better class of business houses endeavoring to buy on the consignment plan very naturally gives rise to an inquiry as to the cause.

It will be found in the first place that the patronage of the Baltic merchants is catered to by the principal manufacturers of the world. This brings about close competition, and with the competition comes, as a natural result, many inducements for the merchants to handle some particular line of goods which is offered.

It would indeed be a reflection on the business qualifications of the merchants were they to refuse to embrace the most favorable of these opportunities. In the next place manufacturers catering to the Baltic trade find that their business is greatly increased by carrying stocks of goods in these countries, that they may be drawn from as the requirements of the trade demand, instead of requiring their customers to order and await the arrival of the goods. In cases where the importers carry these stocks it is always found that the prices rule lower than when the manufacturers carry them; therefore, the manufacturers practically carry these stocks themselves, feeling that the goods are as well off in this way as if stored in their own warehouses at home. As a matter of fact, the importer receives the goods, pays the duty and stores them in his own warehouse without expense to the manufacturer. Settlement for goods is always made in cash at a fixed time, this time of settlement not depending upon when the importer receives pay from his customer, but always upon the arrangement between himself and the manufacturer. In many cases, for instance, a large portion of the invoice is paid before the goods reach destination. With these altered conditions considered (as compared with the practice of consigning goods in America), the manufacturer is really not selling on what we understand as the consignment plan, but upon outright sale, and the closer he trims his foreign stock to suit the demands of the trade, the nearer will he approach to a real cash basis of selling. It is worthy of note that where the heaviest demands for any stated line of foreign goods existed on the Baltic, there were correspondingly large stocks kept on hand by the manufacturers, and of the American goods kept in storage many were the products of our largest and most representative manufacturers.

A large volume of the Baltic business is conducted strictly upon a cash basis, i. e., sight draft with bill of lading attached. In these cases the goods are usually paid for before they are received, especially if they are being shipped from a distance.

Owing to their close proximity to the Baltic, Germany and England have very naturally supplied the bulk of that trade. There is scarcely any article consumed on the Baltic which these countries do not supply, and while some American goods reach this trade through these channels, it usually occurs at a disadvantage to the Americans. American goods are decidedly in favor with these merchants, and during the writer's stay in Copenhagen he received many inquiries for the addresses of American manufacturers. They readily recognize the superiority of American-made goods, and as they are less difficult to introduce and give better satisfaction than European goods they are naturally much sought after.

Of the few lines of our goods which have been introduced into this market may be mentioned machinery, leather, flour, shoes, harness, packing-house products, etc., etc.

As an illustration of the favorable impression created by American goods, it can be cited that a New Orleans manufacturing firm, after having had their goods on the market but three months, were doing a business of $5,000. A Cincinnati harness manufacturing firm had no difficulty in selling a $2,000 stock of harness and saddles which had been sent over as samples, and one of the members of the firm told the writer that the prices were even better than could have been secured in America. American reapers and self-binders were in general use, and commanded full price. It is not intended by these citations to convey the idea that full prices can be obtained on all commodities, for this is not the case. The greatest drawback which we will encounter will be in the freight rates. These are now, in many instances, much higher than is consistent, but this is owing to the fact that our trade is so undeveloped that the transportation lines can yet see no inducement for lowering the rates. There are now two direct steamship lines to Copenhagen from this country—the Thingvalla line, sailing from New York, and the United Steamship Company's steamers, sailing from New Orleans. Both of these lines sail under the Danish flag. As to the matter of distance, which point is sometimes raised in speaking of America selling on the Baltic, it can be shown that we ship goods to greater distances within the United States than when we ship to Copenhagen, and in some instances it takes longer for goods to reach their destination in this country than it would were they going across the Atlantic.

CHARLES E. CURRIE,

Louisville, Ky.

INJUNCTIONS AND RATE WARS.

Last week it looked as if nothing but the exhaustion of the combatants (or perhaps the purchase outright of the weaker of them by the stronger) would end the demoralization of railroad rates at the south that had resulted from the conflict between the Seaboard Air Line and the Southern Railway Company. The dissolution of the injunction obtained by the receiver of the Port Royal & Augusta Railroad against the other roads involved in the competitive rate-cutting outbreak had been dissolved by the United States Court, and the filing of a complaint on the part of the Seaboard Air Line against the Southern Railway alleging that its rate reductions violated the short-haul clause of the Interstate Commerce law, inasmuch as they applied only to competitive and not at all to local business, promised to make the United States Interstate Commerce Commission a factor in the dispute. The North Carolina State Railroad Commission had also taken a hand in the matter by citing all the railroads before it, with a view to having them lower their passenger and freight rates proportionately to the reduction in their through tariff, while the Traffic Association, representing the entire railroads of the south, had been summoned to a meeting which had for its object the reduction of charges in every direction to correspond with the cuts that had originated with the Seaboard and Southern Railway systems. The utter demoralization of charges that were thus threatened was somewhat new at the south, and, indeed, can only be paralleled by the conditions which, in former years, were annual occurrences among the granger lines.

A new aspect has, however, been given to the situation by the action of the United States Court for the Georgia District. Judge Speer, of that district, on the night of September 10, issued a sweeping order compelling the Seaboard Air Line and the Southern States Freight Association to restore the rates recently cut, upon the ground that the course of the roads gave an undue preference to Atlanta and prejudiced corporations and others doing business in the vicinity of Macon, Augusta and other points. The application came from an association of wholesale merchants at the latter city, and rested upon the third section of the Interstate Commerce act prohibiting discrimination in favor of individuals and localities. The order, which was in the form of a mandatory injunction, commanded the defendants to renew the rates on interstate freight shipped to Atlanta as they were on and before September 5, and enjoined them from continuing the rate-cutting. The action of the court in this case, it will be observed, rests on different grounds from that in which the injunction of Judge Simonton (afterwards dissolved) was based. The latter was an effort to secure protection by the court for a property in the hands of its receivers against alleged unreasonable rates. In the present instance Judge Speer's court has before it a proposition in which the plaintiff simply alleges that discrimination had been practiced against one locality as against another.

In view of this action of the court the threatened reduction of rates at the south has been (perhaps temporarily) averted. The Southern States Association has rescinded its orders for a general cut, and the rate war has been in a measure transferred to the columns of the daily newspaper, in which the leading officials of the Seaboard and the Southern Railway respectively attack each other's position and motives in instituting and keeping up the fight. Attacks upon the financial position of the Seaboard have been met by its officers with the statement that the company's condition and that of its auxiliary system is sound, and that in the year ending June 30 it had a surplus over all charges of $158,000. An application to modify the last order of the court was also hinted at. On the other hand, the officials of the Southern Railway are quoted as charging in a communication to the Georgia state railroad commissioners that the boycott against the Air Line was the result of the discovery that it had been indulging in secret manipulation of through rates to the west and discriminations in favor of one set of shippers against others.

THE RAILWAYS OF THE WORLD.

The *Railway Age*, in its issue of September 11, presents some figures giving the total railroad mileage of the entire world according to the latest estimates. These statistics not only emphasize the position of the United States as the possessor of the largest length of such lines of any country, but call attention to the enormous magnitude of such lines of communication to the globe at large. When, as the journal in question remarks, it is considered that hardly more than fifty years have elapsed since the construction of the first railroads, the fact that their total extent has grown to a little less than 450,000 miles is fairly astonishing. This constitutes a length of main lines sufficient to encircle the world nearly eighteen times. There are few exceptions among the nations in their possessing such means of communication and transportation, and those exceptions are mainly unimportant and backward countries, while many of the old world peoples have but lately com-

menced the work of construction, which will continue till all the habitable face of the globe is covered with a close network of steel roads. An example of this is afforded by China, which extraordinary country has at last been converted to the necessity of possessing such facilities of intercommunication. Indeed, it might be mentioned here that the present week has emphasized this change of policy on the part of China by the award to an American manufacturing establishment of the contract for supplying locomotives for the Tientsin and Pekin railway line now under construction.

The newspaper from which the figures referred to are quoted tabulates them by continental divisions and continents, as follows:

RAILWAY MILEAGE OF THE WORLD.

Countries.	*Miles.*
Europe—	
Germany-Prussia, 16,688; other German states, 11,558.	28,246
France	24,841
Russia and Finland	22,096
Great Britain and Ireland	20,603
Austria-Hungary	18,664
Italy	9,088
Spain	7,548
Sweden	5,738
Belgium	3,445
Switzerland	2,160
Netherlands	1,927
Roumania	1,604
Portugal	1,454
Denmark	1,400
European Turkey, Bulgaria and Roumelia	1,240
Norway	1,072
Greece	562
Servia	316
Islands—Malta, Jersey, Man	68
Total Europe	152,422
North America:	
United States	179,393
Canada and Newfoundland	16,134
Mexico	6,590
Central America	021
Total North America	203,138
South America—	
Argentine Republic	8,675
Brazil	7,490
Chili	1,967
Uruguay	1,119
Peru	1,056
Venezuela	634
Bolivia	621
U. S. of Colombia	281
Ecuador	186
British Guiana	22
Paraguay	157
Cuba	1,575
Dominica	71
Other islands	457
Total South America	23,799
Asia—	
British India	18,777
Japan	2,237
Russia	1,895
Dutch India	1,212
Asia Minor	1,100
Ceylon	271
Siam, Malay and Port India	227
Cochin China, Tonquin, etc	201
China	124
Persia	34
Total Asia	26,078
Africa—	
Cape Colony	3,140
Algiers and Tunis	2,029
Egypt	1,250
Orange Free State	621
South African Republic	615
Natal	399
Congo, Senegal, Mozambique, etc	777
Total Africa	8,141
Australia—	
New Zealand	2,161
Victoria	3,071
New South Wales	2,616
South Australia	1,880
Queensland	2,378
Tasmania	474
Western Australia	1,147
Hawaii	71
Total Australia, etc	13,795
Recapitulation—	
Europe	152,423
America	226,937
Asia	26,078
Africa	8,141
Australia	13,795
Total	427,374

It will be seen from this that North America furnishes no less than 47½ per cent. of the total, and the United States alone about 42 per cent., while European countries altogether have some 35½ per cent. of the world's entire mileage of 427,000 miles of steam roads. Unitedly, therefore, Europe and North America take the lead with nearly 83 per cent. of the railroad mileage in existence, or a little short of seven-eighths thereof. In absolute length of lines the United States, with its 179,000 miles, is far in advance of any other single country—so far, indeed, as to render comparison impossible. Next in order comes the German empire with 28,246 miles, France being third with 24,841 miles, Russia fourth with 22,096 miles, and the United Kingdom fifth with 20,903 miles. Austria-Hungary is sixth with 18,664 miles. The only other countries in which the aggregate mileage reaches double figures are two British possessions—India, where the railroad mileage is no less than 18,777 miles, and Canada, or rather British North America, with 16,134 miles. Among other countries whose progress in railroad construction, though recent, has been extensive, particular attention may be directed to the Argentine Republic, which owns the respectable total of 8,675 miles; Brazil, where the total is 7,496 miles; Japan, with its 2,237 miles, and Cape Colony, with 2,440. Indeed, if Natal's total and that of the two Dutch republics of Africa are combined, the South African group of states boast of an aggregate of over 4,000 miles. China, it will be observed, has only 124, though from present indications the Celestial Empire promises to become within the next decade the scene of an important railway development.

The proportion of railroad mileage to territory and population differs widely and affords some noteworthy extremes which are exhibited in the ensuing tabulation, including a number of the leading railway countries:

	Miles of railway.	*Miles per 100 square miles.*	*Miles per 10,000 inhabit'ts.*
Belgium	3,445	29.1	5.4
Great Britain	20,903	16.6	5.3
Netherlands	1,927	13.5	3.8
Germany	28,249	13.6	5.5
Switzerland	2,160	13.1	7.2
France	24,841	11.5	6.4
Italy	9,088	7.8	2.9
United States	179,393	5.7	26.1
Canada	16,134	.4	31.8
Mexico	6,990	.7	6.0
British India	18,777	.9	.6
Argentine Republic	8,675	.7	19.1
Australia	13,795	.6	32.4

The British islands and continental Europe (exclusive of Russia, Austro-Hungary and Turkey) lead in respect to the density of railroads in relation to their areas. Belgium, as of old, is the best supplied in this respect, with 29 miles of line to every 100 square miles of territory, and Great Britain comes next with 16.6 miles of road to the same area. On the other hand, Australia has the largest amount of road to every 10,000 inhabitants, the proportion in its case being 32.4 miles, while Canada is a good second with 31.8 miles to the like number. The United States comes third in this respect, boasting, as it does, of 26.1 miles to every 10,000 citizens, and the Argentine Republic is in this respect one of the best supplied countries of the world, with 19.1 miles per 10,000 people. British India, one of the most densely populated countries in existence, has, as already mentioned, 18,000 miles or more of lines, but, divided into its enormous number of inhabitants, there are but six-tenths of a mile to each 10,000.

CHECK TO BRITISH FOREIGN TRADE.

Returns of import and export totals in the United Kingdom for August are somewhat surprising, showing as they do a check to the steadily increasing volume which had marked a number of preceding months. The falling off of imports in August this year compared with last was £2,114,774, and of exports was £179,929, but these comparisons are with a period when noticeable increases began to make their appearance, and an English exchange adds that it should be kept in mind "that a year ago we were sending very freely to the United States certain classes of goods with which it is easy for a community to overstock itself. Of course, that would not account directly for the growth in the imports in the later months of last year, but it need hardly be insisted on that the more we ship abroad the more we receive in produce by way of payment. The decrease of £2,114,774 in last month's imports is equivalent to 6.11 per cent., and it goes against a gain of £2,972,784, or 9.4 per cent., in August, 1895. Thus, though the check that has been given to the arrivals of foreign produce and goods is decided, we are still importing on a distinctly bigger scale than in 1894, and for the eight months which have elapsed this year shows an excess of £9,936,955, or 3.63 per cent., over the value of the imports for the same period of 1895, and an improvement of £8,898,348 on the figures for the first eight months of 1894. As two-thirds of the decline in the value of the imports last month arises from duty-free foodstuffs, a comparatively small percentage remains to be distributed among what may be called the industrial commodities—the metals and other raw materials which feed the forges and looms that furnish two-thirds of our exports."

Under four headings there are moderate gains in the imports—living animals, tobacco, metals and manufactured articles. Of these only the two latter call for comment. Copper contributes £231,723 and tin £58,858 toward the quite satisfactory gain of £256,900 in metals. Manufactured articles were imported to a value £96,899 greater, the principal advances being in cotton and iron. The increase of £96,900 in manufactured goods would have been greater but for a decline of £290,960 in the value of leather. Of the decreases in imports duty-free foodstuffs account for £1,426,787, of which wheat alone represents £1,313,900. The Atlantic ports of the United States, Canada and Chili sent more, but the additions to their contributions were but a tithe of the diminution in the supplies from the Pacific coast of the States, Russia, Argentina, India and Australasia.

Referring to the decline in August's exports, an exchange says:

"Were it not that the United States seems to have overestimated her requirements in the way of woolen and worsted fabrics in the earlier months of this year, we should not have had any decrease at all in the export totals. Under no head has there been any great divergence from the main results attained in August last year. The biggest gain is of £202,615 in metals, and the biggest loss that of £200,337 in raw materials." The United States is pointed out as taking a smaller value of alkali, bleaching materials, wool, woolens and tinplate from the United Kingdom last month than in the like month last year.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

A paper recently written by an American physician who has been sojourning in the East, and which has been printed in the public health reports for the Marine Hospital Service, calls attention to the fact that the operation of the Suez Canal is not an unmixed good, inasmuch as it makes Egypt the highway of travel to the Orient, and thus opens the way for the easy and speedy transmission of cholera to Europe and America by means of the annual pilgrimages to Mecca, in which the Mohammedans of India participate in large numbers. The cholera plague, now raging in Egypt, had its origin in the pilgrimage of last spring, and already its victims number 16,000.

CURRENT BUSINESS NEWS.

Industrial.

The Laundrymen's National Association held its annual session in Chicago this week.

The Biennial Convention of the Brotherhood of Locomotive Firemen of North America was held this week in Galveston, Tex.

The miners and operators of the East St. Louis district have reached an agreement. It is a return to the scale of January 1, which is a 12½ per cent. raise above present figures. The men wanted 20 per cent.

The Denver Trade and Labor Assembly has decided to send a committee to Mexico to investigate the conditions of labor in a free-silver country.

The Union Mills, at Moosup, Conn., have started up on full time.

The Arlington Cotton Mills at Wilmington, Del., have resumed after a suspension of two months.

The Amoskeag Mills at Manchester, N. H., will resume full time in all departments September 21, giving employment to 6,000 people.

The rolling mills of the Hollidaysburg, Pa., Iron & Nail Company, which have been shut down since June 1, resumed operations this week.

After an idleness of two months the Joliet branch of the Illinois Steel Company has started up, giving employment to 2,000 men.

The Cambria Iron Works at Johnstown, Pa., have resumed operations, giving employment to 3,000 men. It is announced that the mills will run steadily throughout the winter.

The Pittsburgh & Lake Angeline Iron Mine, the largest producer of ore in the Marquette range, in Michigan, is to shut down indefinitely on September 26. Five hundred men will be thrown out of work.

The conference of the window glass manufacturers at Cincinnati September 16 agreed upon a plan by which the western and eastern men will act in "harmony and distribute orders equitably. A price was agreed upon by which it will be made unprofitable to import glass, and an endeavor will be made to secure the American market for American glass. An alliance was formed, offensive and defensive, to protect the interests of the manufacturers."

The Baldwin Locomotive Works has received an order for eight locomotives for the Imperial Railway of China, "the only railroad in the Chinese empire."

Commercial.

The exports of breadstuffs during August and the eight months ending August 31 this year and last compare as follows:

	Quantities		Values	
August.	1896.	1895.	1896.	1895.
Barley, bush	1,604,726	264,967	$613,214	$106,233

Cotton exports in August, 1896, were 92,312 bales, or 46,019,866 pounds, valued at $3,549,916, against 41,201 bales of 20,370,141 pounds, valued at $1,292,600, in August, 1895. For the cotton year ending with August, 1896, the exports were 4,751,384 bales, valued at $193,987,846, against 6,883,188 bales, valued at $201,536,926, in 1895.

The total exports of provisions, including cattle, hogs, beef, pork, lard, bacon, hams, oleomargarine, butter and cheese, for August, 1896, were valued at $12,840,458, against $11,284,464 in 1895. For the eight months ending August 31 this year the exports were valued at $107,684,119, against $101,131,788 in 1895.

The exports of petroleum and the by-products for the month of August and the eight months ending August 31 make the following comparisons:

	Gallons		Values	
	1896.	1895.	1896.	1895.
August	88,045,592	69,997,133	$5,618,318	$5,036,815
Eight months	600,929,859	542,202,342	40,739,965	34,404,413

A San Francisco dispatch says that the North German Lloyd Steamship Company is about to establish a line of steamers between Bremen and Galveston as a feeder to the Southern Pacific Railway. The same fare will be charged for passengers as from Bremen and Hamburg to New York.

According to advices received at Port Townsend, Wash., the Behring sea fleet will disband at an early date.

A Kansas City packing house is reported to have received an order direct from the Japanese government for 18 car loads of corned beef. The order is one of the biggest ever received there and will be ready for shipment within ten days. This immense shipment of beef is believed to be for use in the Japanese navy.

The Philadelphia *Press* says: "Buying of commodities on a large scale has at last begun in anticipation of an advance of prices. Pig iron, wheat, wool, leather, hides and cotton have been bought in this way by far-sighted men."

The government report on damage to cotton has advanced the price. Steady weather may increase the crop, and the Philadelphia *Press* thinks that in the light of last year a total crop of 7,500,000 bales will meet the world's demands. "The average world consumption of cotton for six years has been (bales of 400 pounds) 11,938,000, and last year's crop gave the world from all sources 11,140,000 bales. A like crop will do the same, and the supply, carried over, visible and invisible, is 2,330,000 bales. Unless a great expansion takes place in manufacture supply will equal demand."

There is dissatisfaction among transportation companies over the canal and lake route at the condition of west-bound business, business with several of these carriers being unusually dull. There is but little sugar going west, merchants west, it is claimed, not buying ahead as much as usual. Cement, which comes on in large quantities at this season, is not being shipped to any extent. Building operations are much smaller west. Offerings of other freight are also light.

It is learned that the Post Office Department intends, with the consent of the railway companies, to open branch offices in the principal railway stations in the large cities for the benefit of persons living near the stations and at a distance from the main post offices. The idea of the department appears to be to establish purely local offices, in the expectation that they would be used for special mail which would be too late for the last trains at night if turned in at the general post office.

The New York Credit Men's Association, which held its annual meeting this week, reports a membership of 197, representing many firms that do an extensive business.

It is reported British merchants do not "control only about half as much foreign wheat as a year ago;" that Russians are buying or canceling early contracts at a loss of 4 and 5 cents per bushel, as Russian supplies are not coming up to expectations; that "the Russian government is again assisting growers to hold their wheat." From a commissioner's report of Russia's crop "it appears short of 1895 where examined, and these examinations point to over 20 per cent. less total yield, with still larger decrease in rye. Exports are estimated not over 50 per cent. those of last season."

The London *Times* says of the large exports of grain from the United States: "We have more than once of late referred to the considerable arrivals of wheat and breadstuffs from the United States this season, which have been accompanied by a great falling off in the landings of these commodities from other quarters. We mentioned yesterday that United States arrivals during August showed only a moderate decrease, while the reduction in the imports from other countries was very large."

Financial.

The following securities were sold at auction this week at New York:

430	Shares Goodyear Shoe Machinery Co.	$32.50 per share
$5,000	New York Central 4 per cent. gold debt certificates, due 1905	101⅜
$20,000	City of Santa Cruz, Cal., 5 per cent. refunding gold bonds	60
$22,000	City of Santa Cruz, Cal., 5 per cent. refunding bonds	60
70	Shares Stickney Warehouse Company	10
$35,000	Sebasticook & Moosehead R.R. of Maine 1st mtge 5 per cent. 30-year gold bonds, due 1925	25
$1,000	City of Santa Cruz, Cal., 5 per cent. refunding bonds, series 40, due 1934	60
365	Shares Duluth, South Shore & Atlantic Railway Company common	3¼
$90	Duluth, South Shore & Atlantic R'y Co. scrip	3
307	Shares Duluth, South Shore & Atlantic Railway Company preferred	6¾
$75	Duluth, South Shore & Atlantic R'y Co. scrip	5

The following annual meetings of railroads and other corporations are announced:

Alabama Great Southern	Oct. 7
Ann Arbor	Sept. 19
Central Vermont	Oct. 20
Chesapeake & Ohio	Oct. 20
Chicago, Milwaukee & St. Paul	Sept. 19
Fitchburg	Sept. 30
Lake Erie & Western	Oct. 7
Louisville & Nashville	Oct. 7
Minneapolis & St. Louis	Oct. 6
New York, Ontario & Western	Sept. 30
Northern Pacific	Oct. 19
St. Louis, Alton & Terre Haute	Oct. 21
St. Louis Southwestern	Oct. 6
St. Paul & Duluth	Oct. 8
Western Union Telegraph Co	Oct. 14

According to a Seattle dispatch the British Columbia banks now refuse to receive United States silver or paper currency.

A statement prepared at the United States Mint Bureau shows that the silver coinage during the month of August aggregated $2,650,000. This yielded to the government a profit or seigniorage of $822,027.03, "which represents the difference between the cost of the silver when purchased and the coinage value."

It is announced that a United States Treasury circular will be issued soon "giving information respecting national banks, state banks, savings banks, loan and trust companies and private banks of the United States, compiled from reports of the Comptroller of the Currency. It furnishes tables showing the aggregate resources and liabilities of the national banks at the date of each call for report of their condition from October 5, 1863, to July 14, 1895, and tables showing resources and liabilities of state banks, loan and trust companies, savings banks and private banks, profit on national bank circulation based on the deposit of $100,000 bonds, and amount of tax collected on the capital, deposits and circulation of national banks from the beginning of the system to June 30, 1895. The circular will be furnished free to any one applying for it, but no more than one copy will be given to each applicant."

Railroads.

The following railroads report gross and net earnings for July:

	Gross earnings		Net earnings	
	1896.	1895.	1896.	1895.
Ala. Great Southern	124,079	126,867	34,668	40,102

The all-rail east-bound shipments of dead freight from Chicago last week were 61,846 tons, against 61,995 tons the previous week and 60,900 tons the corresponding week of the previous year.

The Shenandoah Valley branch of the Norfolk & Western Railroad has been sold at Roanoke to the reorganization committee for $1,500,000.

A rate war on canned goods among the western railroads is announced at Chicago.

The Southern States Freight Association have decided to cut cotton rates 14 cents per hundred to all south Atlantic and gulf ports to meet the Seaboard Air Line's rates.

Miscellaneous.

Bids were opened in Washington on Monday for three new battle ships. The William Cramp & Sons' Ship and Engine Building Company, of Philadelphia; the Union Iron Works, of San Francisco, and the Newport News Company were the lowest bidders, all the proposals closely approximating each other.

The Bancroft and Cincinnati left New York this week for Constantinople. The Bancroft is to join the Minneapolis, the flagship of the European squadron.

Bourke Cockran addressed an audience of 12,000 people in Omaha this week. Secretary Morton presided.

Foreign.

The annual session of the British Association was opened at Liverpool September 16. Sir Joseph Lister, Bart., president, delivered an address, in which he dealt at some length with the relations between science and medicine. He instanced the assistance to surgery by the new discoveries in photography, and dwelt upon the value of anæsthetics and the discoveries of the late Professor Louis Pasteur and of the use of antitoxin.

Official notice has been given by the Canadian government that "the period for the free entry of mining and smelting machinery is extended to July 1, 1897." In the meantime "the manufacture of this class of machinery in Canada is making headway, despite the more liberal interpretation of the tariff in favor of the importer during the last twelve months."

The London *Chronicle* hopes the English public debt will be reduced to £500,000,000 in the next ten years. The debt of the leading nations in Europe is stated to have increased and decreased as follows during the past twenty years:

	1874-5-6 (millions).	1894-5-6 (millions).	Inc. (+) or Dec. (—).
England	£775	£652	—124
France	796	1,038	+242
Italy	339	505	+166
Austria	228	336	+108
Germany	■	102	+96

The debt per capita is estimated as follows:

	Capital.	Interest.
England	£16 10s.	£0 9s. 1d.
France	32 12	1 5 6
Italy	16 6	0 15 ■
Austria-Hungary	14 ■	0 11 0
Germany	2 0	0 1 0

Consul Stang writes the Department of State from Saigon, Cochin China, that the Chinese rice crop did not suffer from inundations as was thought probable a few weeks ago. The Hong Kong market has declined, while the Saigon market remains firm. Exports from January 1 to July 29 this year amounted to 886,114,762 pounds, as compared with 933,164,694 pounds during the corresponding season of last year.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Garnishment—Bank—Deposit.

The Supreme Court of Georgia held, in the recent case of Petty vs. Dunlap Hardware Company, that money deposited in a bank to the credit of "P——, agent," could be reached by a garnishment served upon the bank at the instance of a creditor of P——, and that if the bank knew the creditor's contention was that this money in fact belonged to P—— individually, and not to another for whom he claimed to act as agent in making the deposit, it could not, except at its peril, pay over the money to the alleged principal, and this being so, there was no occasion in such a case for the creditor to obtain an injunction to prevent the bank from so doing, although the debtor was insolvent.

Accident—Damages—Mortality Tables.

In the recent case of The Macon, Dublin & Savannah Railroad Company vs. Moore et al., the Supreme Court of Georgia held that on the trial of an action for personal injuries alleged to be permanent, the mortality tables are not proper evidence, and instructions as to their use are inappropriate, unless there be some evidence as to the value of the plaintiff's services or capacity to earn money; that the present value of prospective earnings through a series of years cannot properly be arrived at by ascertaining the entire amount and deducting 7 per cent. from the whole, and that the following charge stated the law too strongly against the defendant company: "A carrier is liable for injuries on its cars caused by a sudden jolting of the cars in starting or coming to a stop, and a railroad company is not relieved from liability by reason of its failure to keep its train, intended for passengers, with all the appliances which extraordinary diligence requires on trains adapted for transporting passengers."

Stock—Pledge—Agreement.

The Supreme Court of Minnesota held, in the case of McMullen vs. Dickinson Company, that when the plaintiff and the defendant corporation enters into an agreement by the terms of which the latter employed the former as assistant manager upon a stated yearly salary payable in monthly installments, said employment to continue so long as the business of the corporation should be continued, provided plaintiff properly and efficiently discharged his duties, and only so long as he should own and hold in his own name fifty shares of capital stock, fully paid up, in defendant corporation, the period of employment was for such time as plaintiff continued to own and hold the stock shares, not exceeding the period during which the corporate business was being transacted, and was fixed with sufficient definiteness, and that there was no lack of mutuality of consideration. The court said that a pledgee of stock shares does not become a stockholder in a corporation, as between himself, the pledgor and the corporation, by simply receiving the shares as collateral security, nor does the pledgor part with his ownership of the shares, nor is he divested of his rights as a stockholder, by merely pledging them as security for the payment of his debt.

Sleeping-car Company's Liability.

In the recent case of Hughes vs. Pullman Palace Car Company, the United States Circuit Court for the Eastern District of Missouri held that the owners of sleeping cars, though not common carriers, are responsible for the discharge of certain general duties arising from their contracts with their passengers and involving the exercise of ordinary and reasonable care and attention toward them; that a violation of such duties may be made the subject of an action either ex contractu or ex delicto, and that in an action against a sleeping-car company for failure to discharge its duty to provide a properly warmed and comfortable car for its passengers, it cannot be held, on demurrer, that damages alleged to have been caused by such failure, and consisting in suffering from the low temperature, contraction of a violent cold, and resulting in permanent injury to the passenger's eyes, are so remote as not to be recoverable. The court said: "However unlikely it may seem that the plaintiff's permanent trouble with his eyes is such a natural and probable consequence of the alleged negligent act as ought to have been foreseen as likely to flow from it, nevertheless the violent cold complained of is not unlikely, according to common experience, to result from such exposure as is complained of, and any damages which do naturally and probably flow from such a cold are the proper subject for recovery in this action. It may be the jury will find that a permanent trouble with the eyes, like that complained of by plaintiff, is so naturally and commonly sequent upon a violent cold as to take it into consideration in awarding damages. Its action, however, in this regard, must depend upon the proof made, and the law applicable thereto, as declared by the court at the time. Independent of this particular matter, however, it must be borne in mind that plaintiff claims damages for each and all of the effects alleged by him to have been caused by the exposure, namely, the sensation of the alleged cold temperature, the violent cold which he contracted, and the fact that it settled in his face. Each and all of these things, as well as the permanent injury to his eyes, are alleged to have made him sick, sore and disordered, and to have caused him such injury as to entitle him to some damages. I do not see how, under this state of pleading, the court can say, as a matter of law, that all the damages claimed by the plaintiff are so remote, unnatural and improbable as not to be recoverable."

Evidence—Accident—Railroad.

The Supreme Court of Georgia held, in the recent case of The Savannah, Florida & Western Railway Company vs. Wideman, that where the only objection to the admissibility in evidence of a written contract between the plaintiff and defendant was, in effect, that under the limitation as to time therein expressed it had expired and was no longer operative as to the matter in controversy between the parties, and the defendant, in whose behalf it was tendered in evidence, offered to prove "that the terms of the contract had been extended by parol," so as to cover and embrace that matter, this objection should not have been sustained without allowing the defendant an opportunity to show that the contract had in fact been so extended, no question under the statute of frauds being involved; that it was error, upon the trial of an action against a railroad company for the killing of live stock, to charge: "Whether the railroad company did use reasonable care or ordinary care and diligence, and every effort to prevent (killing the stock), is a question for the jury to determine from the evidence," and that requiring the company to use "every effort" to prevent killing the stock was imposing upon it a rule of diligence more stringent than the law exacts. The court further held that a witness can neither be impeached nor sustained as to credibility by allowing another witness to testify as to his individual opinion upon this question, and that in determining upon which side of a disputed issue the evidence preponderates, the credibility and not the number of the witnesses introduced pro and con is the proper test.

Street Railway—Charter—Construction.

The Court of Appeals of the District of Columbia held, in the case of The District of Columbia vs. The Metropolitan Railroad Company, reported in the Washington *Law Reporter*, that under a provision in the charter of a street railway company requiring the company to "keep said tracks, and for the space of two feet beyond the outer rail thereof, and also the space between the tracks, at all times well paved and in good order," the duty of paving and keeping in repair arises only when the rails are laid and tracks constructed on some appreciable part of its line of road; that merely laying crossties and sleepers in streets along which it is proposed subsequently to construct its tracks, the work being done with the consent of the municipal authorities while the latter are engaged in paving the street, the company not being ready to construct its tracks and having under its charter considerable time in which to do so, is not sufficient to charge the company with the cost of the work; that where, however, the municipal authorities, who are clothed by law with entire control of the streets and avenues, determine to change the character of the pavement in certain streets in which the company has constructed its tracks and is operating its road, the obligation imposed by the charter will arise; and upon the failure of the company, on being notified, to do the work itself, the municipal authorities may cause the work to be done and charge the cost thereof to the company; that the fact that the substituted pavement is unfit for the purposes of the company, and has to be removed and replaced by the company with a pavement similar to the former pavement at its own expense, will not relieve the company from the obligation to pay for the work done on its behalf by the municipal authorities, and that the operations of the board of public works, so far as they could be the source of resultant right or liability, have been so frequently recognized by Congress that they must be held to have been validated to the same extent as if they had been authorized in the first instance, although in fact unauthorized.

BUSINESS NOTES.

International Zoological Congress.

At the Leyden International Zoölogical Congress, held last year, it was decided that the next meeting of the kind should take place in England, in September, 1898, and that Sir William Flower, director of the British Museum (Natural History), should be its president. We now learn that it has been determined that the 1898 congress, the fourth of the series, shall meet at Cambridge under the auspices of the university, simultaneously with the International Physiological Congress, which has arranged to go there in that year.

Trade at Baltimore.

After interviewing the leading men in the principal trades in Baltimore, a representative of BRADSTREET'S reports that "in quite a number of lines business is prospering, and is equal, if not ahead, of the same period of last year. These particular lines, as a rule, represent the necessities; in other lines, which to a certain extent represent the luxuries, there is a great falling off in sales. But opinions are the same in one respect, viz., if the advocates of sound money win at the coming election, an era of prosperity will begin, while in the event of silver being victorious, the opposite will be the case."

British Bicycles in France.

The British consul at Nice writes: "Cycling being very popular on the Riviera among all classes of society, the trade in cycles has been greatly developed. There are three makers of machines in Nice. They used to obtain all their materials from the United Kingdom, but since last year they have turned towards the United States, and are now obtaining from that country a great many articles required in the trade. Up to the present the machines sold by the agents of different manufacturing companies are chiefly of English make. Next in importance are those of French make, while but few machines made in the States are to be seen in the market here. One French firm of cycle manufacturers has a branch retail establishment in Nice."

London's Foreign Bondholders.

The twenty-third annual report of the Council of the Corporation of Foreign Bondholders for the year 1895 has been issued, and gives useful information regarding the position of defaulting countries. The report contains the following list of the principal countries in default in 1895–96:

States.	*Approximate principal outstanding.*	*Approximate interest arrears.*
Argentine provincial loans	£20,200,912	£5,681,757
Argentine municipal loans	2,451,840	742,752
Argentine provincial cedulas	13,697,364	2,230,000
Colombia	1,913,500	1,522,428
Costa Rica	2,000,000	200,000
Former Confederate States	2,418,800	5,248,796
Ecuador	693,160	....
Honduras	5,398,570	11,046,229
Liberia	100,000	154,000
Louisiana (certificates)	184,432	....
Mississippi	1,400,000	4,107,000
West Virginia	3,047,874	....
Totals	£53,506,452	£30,932,962

Japan as a Colonizing Nation.

A London exchange says: "Japan intends to take a place in the ranks of colonizing nations. She has dispatched a commission to investigate trade conditions on the western coast of South America, in Central America and in Mexico, and if the report is favorable new steamship lines will forthwith be established between Japan and the American Pacific ports. Japan, moreover, contemplates the immediate acquisition of about 300,000 acres in the Mexican state of Chiapas, which it is intended to divide into small sections of about twenty acres each, and on each section to settle a Japanese family. The scheme is a large one, but the Mexican government does not regard it with disfavor, and the Japanese government, as a mark of its approval of the project and its anxiety to see it carried into practical effect, is willing to pay a substantial subsidy."

Baltic Canal Rates Reduced.

The Baltimore *Sun* says: "The North Sea and Baltic Canal, which was opened with grand pomp and prospects in July of last year, and goes by the official name of Kaiser Wilhelm Canal, has since been disappointing some of the hopes set upon its undoubted advantages for maritime traffic and its unexcelled equipment. Transit and receipts during the first year have fallen considerably below apparently well-founded estimates. Suggestions for improving its service, made by home and foreign shipping interests, were heeded and carried out, electric lighting completed, and the passage of the largest merchant and marine ships assured for all seasons of the year, but business was slow to increase. To account for this fact various views have been advanced. It has been said that mariners have always been tardy in availing themselves of similar routes, though less perilous than the accustomed ways, and much shorter and cheaper besides. National prejudices have been mentioned as one of the obstacles; even that old scape-goat, so often affording a convenient explanation of self-inflicted failure, the pedantic formalism of bureaucratic management, was put forth."

British Trade with Northern Siam.

The report of the trade of the past year of Northern Siam, prepared by Mr. Archer, British consul at Chiengmai (Zimmé), shows that while the trade of the district by way of Bangkok is increasing, that by way of Moulmein is decreasing, although there are no duties on the Siam-Burma frontier. This is due to the want of proper communication. The cattle trade with Burma has almost disappeared. Elephants are omitted from the returns, but several hundreds of these animals are taken to Burma yearly for sale. All over Northern Siam foreign goods are rarely found, British trade holding undisputed sway. Trade with the newly-acquired French territory east of the Mekong is "as sluggish as ever." The working of the teak forests—the most important matter connected with British trade in the region—has of late been put on a much more satisfactory footing by a new form of lease issued by the Siamese government. An experienced officer of the Burma Forest Department has been lent to the Siamese to aid them in framing proper forest regulations. The telegraph lines are lamentably neglected; that to Bangkok has not been open for a year owing to the want of a few repairs or chemical appliances.

Indian Territory.

The present condition of the Indian reservation in the United States is described by the British vice-consul at Kansas in his report for the past year. "It consists of one of the finest areas in the west, and contains 31,400 square miles, of which 20,000 square miles have rich coal measures. Large quantities of coal from here are now being imported to Kansas. In 1890 the population was 66,289, mostly Indians of the so-called five civilized tribes—Chickasaws, Cherokees, Creeks, Choctaws and Seminoles. Each of these 'nations,' as they are called, has a governor, who controls the affairs of the tribe. There are not many whites in the Indian Territory on account of its lawlessness; there is more crime there than in any other state or territory in the Union. Between March 5 and October 25 last year 186 murders there were reported, and no doubt many were committed and not reported. The whites there are not of a good class; many of them are renegades and outlaws who marry into Indian families, and their children do not make good citizens. The area is, strictly speaking, a cattle-producing one, and it sends considerable numbers of live stock to Kansas. Cotton-growing is in its infancy there, the quantity sent to Kansas last year amounting to 17,807 bales of 500 pounds each. Six railways run through the territory and have 911 miles of line in it, while charters for about 400 miles more have been granted."

Germany's Competition with England.

A German correspondent of an English news paper says: "It is useless for British traders to rage and storm and inveigh against the Germans. Heavily handicapped by the conscription laws, the absence of more than two convenient harbors, comparative scarcity of coal and iron, and general poverty, the Germans have deliberately set to, struck boldly out for a share of the world's trade, and succeeded. Whether in ocean shipbuilding, in machinery, in chemicals, in manufactures, in fancy work, or in traveling and advertisements, they have already made enormous strides, and even outdistanced us in many matters. The Foreign Office has taken a right step in increasing the number of commercial attachés, while Mr. Chamberlain has acted vigorously in calling upon colonial governors for reports upon the decadence of certain branches in British trade. But this is not enough. Our commercial education is deficient; our traders do not go sufficiently to the root of the matter; we have not enough critical and scientific knowledge; our range of mind is too narrow; our commercial travelers seldom know how to speak the language of the foreign traders they visit; our merchants abroad are too luxurious, too pleasure-loving, too unaccommodating, too haughty and too contemptuous. There is plenty of time to stop the descent before it becomes precipitate. We must not trust too much to government action, which, at best, can but be ancillary; we must keep our own eyes open, examine carefully where the shoe pinches, and set bravely about a remedy."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The moderate improvement in trade the past few weeks continues, and is emphasized by further speculative purchases of wool, renewed buying by wool manufacturers, the reduction of surplus stocks of cotton goods, increased demand for seasonable fabrics, continued confidence among manufacturers of iron and steel that there will be an early revival in demand, and improvement in request for staple goods in the south Atlantic and gulf states.

The volume of sales of general merchandise shows a small gain over last week, and the feeling among wholesale merchants is one of more confidence in a comparatively early improvement. Unexpectedly large sales of dry goods are reported from Boston, Chicago and St. Louis, with indications they may continue throughout the month. At the more important northwestern centers larger sales of hats, shoes, hardware and drugs are reported, although the total is less than in the like portion of last year. Much of the gain at the south is due to the rapidity with which the cotton crop is being gathered and marketed. New Orleans reports banks lending more freely than anticipated, and the outlook consequently more encouraging.

Boston wool sales amount to 5,500,000 pounds this week, three-fifths of which was taken in large blocks by speculative buyers and by manufacturers, the result being a firmer feeling and higher prices for best grades. More cotton mills are starting up, but there is relatively less improvement in woolen goods, varieties which sell well being the exception. Shoe manufacturers report little doing beyond selling samples for spring delivery and few case orders likely until after election. Mercantile collections are almost universally slow, some centers reporting them almost impossible to make. The money markets are somewhat less stringent, but rates continue high. Funds tend to the interior, and northwestern grain elevator owners have secured large amounts to move the crops. Banks continue to care for regular customers, but few time loans are made, and rates for loans on call in some instances have advanced.

At San Francisco general business is somewhat more active, particularly exports of barley. Trade has been stimulated at leading Washington business centers, in which state rains have damaged the grain crops. Williamette valley, Oregon, wheat raisers are selling wheat freely at current quotations.

The increase in total bank clearings throughout the United States this week is somewhat larger than in recent alternate weeks, amounting to $909,000,000, an increase of 20 per cent. compared with last week, but a decrease of 16 per cent. when contrasted with the corresponding period last year. The increase, when compared with the third week of September, 1894 (a period of extreme business depression in most lines), is only 1 per cent., but when compared with the like week in 1893 (during the panic), this week's gain is 13 per cent. The falling off from the total in a period of prosperity, from the corresponding total of 1892, is 30 per cent.

Among favorable features is the prices movement, the upward tendency of last week being continued, with increases for hides, owing to scarcity; for wool, on speculative demand from England and from domestic manufacturers; of wheat prices, due to a large and steady export movement; flour, in sympathy with wheat; oats on the short crop, and of prices for Indian corn, lard, coffee and print cloths. Iron and steel prices are firmer in the expectation of revival after election, and quotations of leather are firm on the advance in hides. Sugar and cotton quotations have been lower.

Stock values at New York are strong, and the market has recovered from realizing sales and short covering, based on idea that the advance would culminate with the Maine election. Speculation is, however, narrow and professional, and outside buying does not develop. A favorable feature is the engagement of about $6,500,000 additional gold in London and Paris, making the total movement $36,000,000. Gold arrivals to date amount to $26,770,000. The Bank of England discount rate was not advanced from 2½ per cent. this week, American demands for gold being transferred to Paris. This also caused bear covering in this market and improved the feeling on Americans in London. Exchange is weak at 4.83¾ for demand sterling.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 3,566,326 bushels, against 3,709,000 bushels last week, and as compared with 2,538,000 bushels in the week one year ago, 3,537,000 bushels two years ago, and with 4,727,000 bushels in the like week of 1893. There has been a heavy increase in wheat exports from the Pacific coast this week as compared with last, but a falling off in shipments from Atlantic ports.

The total number of business failures throughout the United States this week is 315, which is 7 more than last week, 97 more than in the corresponding week last year, 97 more than in the like week of 1894, 31 fewer than in the corresponding period of 1893, and not quite twice as many as in the like period of 1892. The increased proportion of the number of failures of concerns with large capitalization continues noticeable.

General trade shows no widespread improvement throughout the Canadian Dominion. Increased activity is noted in the Province of Quebec since the autumn fairs, and in Montreal since the exhibition opened. At Toronto prices continue firm, those for wheat being higher. Interior merchants throughout Ontario and Quebec continue to buy for immediate wants only, and manufacturers to await demand. The only noteworthy activity in Newfoundland is in mining. It is reported that numbers of people are emigrating from that colony. Trade is quiet in New Brunswick, and on Prince Edward Island the grain crop promises well, as do the hay and fruit crops. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $20,109,000 this week, 25 per cent. more than last week, and slightly more than in the corresponding week last year. There are 41 business failures reported throughout the Canadian Dominion this week, against 41 last week and 41 in the corresponding week a year ago. In the like period of 1894 the total was 43, and in 1893 it was 47.

FINANCIAL.

The Money Market.

The better feeling in the New York loan market was not checked by the rather disappointing bank statement of last Saturday. Rates for call loans relaxed somewhat in the earlier part of the week, the figures for bankers' balances on the Stock Exchange falling to as low as 4@5 per cent. Somewhat of a damper was, however, put upon the cheerful feeling by the fact that several commercial failures were announced, and by the expression of opinions in influential banking circles that rates would not yield materially, and that the effect of the heavy gold influx would be merely to check any decided hardening. In the latter part of the week foreign bankers called loans rather freely, and the call rate touched 8 per cent., while renewals were made at 6@7 per cent. on Thursday, but on Friday the condition was easier with renewals at 6 per cent., and some loans were made at 4@5 per cent. In time money conditions are unchanged. The supply is very small, and some large transactions extending over the first of the year are reported at 6 per cent. and a commission, making the rate equivalent to 9 per cent. Some little spasmodic activity in commercial paper is reported, and the offerings were larger. Rates, however, for best names and doubles remain at 7@9 per cent., while the only buying of any consequence comes from a few out-of-town institutions. The drain of money to the interior continues, and there was uecertainty about the character of to-day's bank statement.

The New York Banks.

About $6,000,000 in currency is understood to have been shipped by New York institutions to their interior correspondents during the week which ended last Saturday. This movement is reflected by the decrease of $2,580,000 in legal tenders shown in the bank statement for the week. The inflow of gold from Europe resulted in the gain of $2,764,000 in the average specie, and the net cash holdings increased $134,000. A decrease of $371,000 in loans and one of $1,417,500 in deposits were the other features, resulting in an increase of $539,000 in surplus. Circulation increased $732,200. The figures of the statement show the following comparisons with those of the preceding week:

	Sept. 5, '96.	Sept. 12, '96.	Changes.	
Loans	$453,070,100	$452,698,800	Dec.	$371,300
Specie	49,196,900	51,961,800	Inc.	2,764,900
Legal tenders	70,799,600	68,219,600	Dec.	2,580,000
Deposits	447,071,800	445,654,300	Dec.	1,417,500
Circulation	17,979,500	18,711,700	Inc.	732,200
Total reserve	119,996,500	120,181,400	Inc.	184,900
Reserve required	111,767,950	111,413,575	Dec.	354,375
Surplus reserve	8,228,550	9,767,825	Inc.	539,275

At the corresponding period last year the surplus reserve was $26,685,250, against $59,953,700 in 1894.

The Boston Banks.

	Sept. 12, '96.	Sept. 5, '96.	Changes.	
Loans	$159,792,000	$160,479,000	Dec.	$687,000
Circulation	10,081,000	10,085,000	Dec.	4,000
Deposits	93,852,000	94,508,000	Dec.	656,000
Due from reserve agts	17,315,000	17,417,000	Dec.	102,000
Legal tenders	6,308,000	6,081,000	Inc.	227,000
Specie	7,275,000	7,259,000	Inc.	16,000
Surplus reserve	880,314	594,857	Inc.	285,457

Silver.

Silver markets showed decided unsteadiness in the early part of the week, the price for bars in London falling to 30d. per ounce, while in New York commercial quotations were 65c. per ounce. This was attributed to the disturbed condition of India exchange in consequence of the advance in money at London. The Chinese demand for silver is also said to have ceased. Later in the week a little buying sufficed to cause decided rallies both here and abroad.

Foreign Exchange.

The pressure of commercial bills of all kinds continues, while the inquiry from mercantile interests is of the slackest kind. The August foreign trade statement, showing an excess of exports of $19,000,000 and a similar excess of $99,760,000 for the eight months ending August 31, is the best comment on the present condition of the exchange market. The firmness of the money market is, of course, responsible for the absence of inquiry on the part of commercial interests, while the disappearance of any buying demand from the larger importers is a feature of considerable importance. Gold importers were, in fact, the chief, and at times the only, buyers of bills, and the exchange market during the whole week has turned mainly upon the gold movement this way. Posted rates for demand sterling were unchanged throughout at 4.84½, but the nominal figure for long bills was reduced on Monday from 4.82½ to 4.82. This was due to decreased inquiry for that class of bills, as well as to the stronger tone of the London money market and the expectation that the Bank of England rate will be advanced. In the early part of the week actual rates for demand sterling were a little firmer at 4.84 @4.84¼ on inquiry from gold importers, but by Wednesday the market became decidedly weaker, and the current rate declined to 4.83¾, and at the close of the week was unsteady at concessions from the last named figure. Long bills have been quoted at 4.81¼ @4.81¾ throughout.

The event of the week was the action of the Bank of England directors on Thursday. A further advance in the institution's discount rate to 3 per cent. had been confidently expected. The London open money market reflected this idea, discounts advancing to 1¾ @2 per cent. and call loans to 1 per cent. The fact, however, that the bank's position is strong and that the demand for Egypt and the continent has been checked seems to have had considerable effect, while the Maine election here and the change of sentiment in London as to the genuine and natural character of the flow of gold in our direction has produced some effect. The strength of sterling exchange in Paris and the withdrawals of gold there for transfer to New York would also indicate that the American demand is being supplied in that quarter. It was, therefore, not a surprise when on Thursday the Bank o England directors failed to advance their rate, which remains at 2½ per cent. The statement for the week shows a loss of £574,000 in specie, and the proportion of reserve is 56.14 per cent., against 56.30 per cent. last week. On this news the London open market became easier, discounts falling to 1¾ per cent., while call money was quoted at ¾ @1 per cent.

The arrivals of gold this week were on a somewhat smaller scale, amounting to $3,600,000. On the other hand, engagements abroad amounted, so far as known, to $6,500,000, bringing the total movement up to $36,000,000 or more. The total receipts here to date have been $26,770,000. Of this week's importing arrangements $4,000,000 was secured in Paris and $2,500,000 in London. It is noticeable that $1,000,000 was taken by a Boston house and will be shipped direct to that city.

THE STOCK MARKETS.

The New York Stock Market.

Speculative interests of the professional kind, which at present furnish all the activity the market possesses, were inclined at the beginning of the week to realize profits on the long side, and in some degree to act on the short side. The result of the Maine state election, while more encouraging for the ultimate success of sound money than had been hoped for, seemed to increase this tendency. It was argued that there will be no further "straws" of this kind to indicate the drift of political opinion in the country, and that the uncertainty that must prevail up to November will be a permanent bar to the development of better conditions in either business or speculation. Another matter on which stress was laid with some effect on prices was the expected advance in the Bank of England rate, the unsettled condition of the London market under the combination of an advance in money, and the dubious outlook in Turkey, together with the belief that steps were likely calculated to check the flow of gold to this country. The fact that money rates here do not relax under the large inflow of gold and that some important mercantile failures occurred were also bearish factors, while current railroad earnings began to show plainly the effect of the combination of light traffic and rate-cutting in some sections. Under these influences there was a pretty general decline in stock market prices, accompanied by some liquidation of speculative holdings, and apparently by still more selling for the short account. This increase in the outstanding volume of bear contracts bore fruit later in the week, when the Bank of England failed to advance its discount rate from 2½, and the London market improved decidely on this and on the absence of apprehended unfavorable developments in the situation at Constantinople. Additional gold shipments from Europe, mainly from Paris, completed the change of sentiment, and when the bear interest turned to cover it was found that stocks were scarce, and a general recovery extending throughout the list was the result. The feeling on American securities in London has improved to a marked extent, though the troubles in the Levant and the fear of some further outbreaks at Turkey's capital tend to keep bullish activity in abeyance on the part of the foreign public. Bonds have not been active, but declines in the early part of the week were succeeded by notable recoveries in many cases, both in speculative and investment issues. The market on Friday was very dull but firm at further advances on covering by the shorts, closing at concessions from the highest prices.

Sugar was the most active feature of the list. It declined from 116 down to 113¾, and fell further, ex the 3 per cent. dividend, to 108⅛ on Wednesday. From this there was a rally to 114 on Friday, mainly on covering of shorts assisted by manipulation. Manhattan, after declining to 81¼, was taken in hand by a manipulative interest, and on enforced bear covering rose to 86⅜. St. Paul, after a decline from 71 to 68½, rallied to 70⅞ in the face of a decrease of $112,000 in its gross earnings for the second week of September. Rock Island fell to 57, but rallied to 59¼, and Burlington, in which there was a fall from 68⅛ to 64⅝, rose subsequently to 59¼. Some attention was paid to the coal stocks, Jersey Central being attacked by bear interests, and fell from 101 to 98, but recovered to 100¼, and Reading was the object of some persistent buying, under which the reorganization certificates rose from 14 to 16¼.

Boston Stock Market.

The tone of the market is quieter, with most stocks attracting little attention. Atchison rules quiet and closes ⅛ point lower, with Chicago, Burlington & Quincy fairly active and ⅞ higher. Boston & Montana is also higher, the close showing an advance of 2½ points. Sugar at the close shows a decline of 2 points from the price a week ago. Bay State Gas has ruled fairly steady. United States Leather has been dull.

Prices of principal shares, with volume of transactions, have been as follows:

IN TRADE CIRCLES.

A BETTER FEELING PREVAILS, DUE TO INCREASED DEMAND FOR WOOL, COTTON GOODS AND OTHER STAPLES, AND, PROSPECTIVELY, FOR IRON AND STEEL.

(Special to BRADSTREET'S.)

Larger Eastern Cities.

Boston, September 18.—The general tone of business continues quiet, but the feeling is better in some lines and more trading is accomplished. The money market is losing some of its stringency, although rates yet rule high. Bank and trust companies are doing little besides taking care of regular customers. Saving banks are renewing somewhat at 6@7 per cent., while a few national banks are buying commercial paper at 8@9 per cent. Call money closes at about 6@8 per cent., with collateral loans at 6½ @7 per cent. The boot and shoe trade is quiet, with little new business outside of selling samples for spring trade. The factories are getting fall orders well along and cutters are being laid off. It looks as though few case orders for spring would be placed until after election. The leather market is quiet but firmer, with hides advanced on short supply.

Philadelphia, September 18.—There seems to be an improved feeling in wool as the result of the dealings last week, which have been at fairly firm figures. Dry goods have shown a little more activity. In lumber, orders are secured by those shading prices most. The buying of tobacco, in all lines except Havana, is for immediate use and light. There seems to be plenty of the Havana here. Carriage goods report a very unsatisfactory condition, with no bright prospects for the coming month. Morocco and leather buyers have bought sparingly. In boots and shoes there is a fair total of orders for the week. In drugs, chemicals and dyestuffs the demand is only for immediate use, while paints and window glass are without important change. Iron has been at low ebb so long that prices have settled down to a point where they are fairly well maintained. An effort has been made to advance pig by some dealers. In every line the complaint is made of slow collections.

Pittsburgh, September 18.—Business conditions have not changed materially, and the volume of trade is about the same as in the previous week. Complaints continue to be heard as to collections, which is considered the worst feature of trade. The business done in the raw iron market shows a material increase, and the trade are of the opinion that within the next few weeks the market will show a further improvement.

Buffalo, September 18.—The general business situation does not seem to improve; most buying is done on a very conservative basis and for immediate needs, and credits are still very carefully scrutinized. In financial circles merchants are being accommodated to the extent of pressing demands and at former rates, but no new lines are taken.

Baltimore, September 18.—Business has been somewhat disturbed by holidays. In dry goods, notions and shoes trade appears satisfactory. Other lines report a dull season. Collections as a rule are only fair.

West and Northwest.

Cleveland, September 18.—In other than the most prominent staple lines of merchandise jobbing trade continues quiet, and the general business situation is without material change.

Cincinnati, September 18.—Business is about the same as last week.

Detroit, September 18.—The situation in trade circles is without special feature. The movement in all lines is moderate, with no improvement in collections.

Chicago, September 18.—The Maine election gave merchants more confidence, and business in dry goods improved. More out-of-town buyers have been here and sales show a good increase, with indications of a continuation for the rest of the month. Cotton goods are firmer and slightly higher. With the clothing and shoe houses sales are no larger, and consist mainly of filling-in orders. Leather is being inquired for, and the feeling is stronger in sympathy with the advance in hides, but buyers are slow to pay more for leather. More inquiry exists for bar iron, steel and pig iron, and sales show a small increase. The Joliet Steel Mills, which have been closed, have been opened and employ 2,000 men. The Bar Iron Association at its meeting here affirm previous prices. The lumber trade is picking up, but receipts have fallen

off owing to the shutting down of many northern mills. Wool receipts, 532,908 pounds.

St. Louis, September 18.—Locally, a slight improvement in trade is noticed. Southern merchants are purchasing their full stocks, and nearby dealers are reported buying in limited quantities. They do not appear to anticipate wants, which makes orders for future shipment rather light. Cotton manufactured goods have advanced in price, which is thought will prove beneficial to dry goods trade. Leather is in better demand, especially sole and hides. Values have advanced 20 per cent. within three weeks. There is a better feeling in finished iron and steel, with a slight improvement in demand. Prices are unchanged in the former, but on a somewhat lower level in steel bars. Light sheets are moving in seasonable quantities, and tinplate plants are doing a fair business. Money is in strong demand, and banks seem to discriminate very closely in extending loans. Collections are fair but a trifle slow, mainly on account of low prices of farm products.

Kansas City, September 18.—General dullness prevails in all lines of trade. Collections are slow.

Des Moines, September 18.—General retail and wholesale trade is very dull. Collections next to impossible to make. Business seems at a standstill, awaiting the result of election.

Milwaukee, September 18.—With the exception of the grocery line, which reports a fair business, no change of note has occurred in trade conditions for the past few weeks. Collections are still rather tardy.

St. Paul, September 18.—There is little change in general trade, except for boots and shoes and hats and caps, where late buyers have been placing fair-sized orders. With grocers and dealers in hardware and drugs business has been good, while dry goods only fairly so. Collections are fairly satisfactory.

Minneapolis, September 18.—Trade conditions noted last week are practically unchanged. Money to move the wheat crop is coming in more freely.

Duluth, September 18.—As fall approaches business in staples shows some improvement, though on the whole it is less favorable than a year ago. Lumber and iron continue quiet. Some outside money is being offered at lower rates, which has a tendency to improve the local situation to some extent.

Omaha, September 18.—Trade in all lines is quiet. Collections are slow.

Sioux Falls, September 18.—Wholesale houses and resident travelers report trade quiet. Dealers prefer to buy in small quantities and often. Grain is moving slowly, and retail trade at most interior points is affected accordingly. General conditions are best in the northeastern part of the state, while at southeast the opposite is true. Collections are fair.

Southern Cities.

Charleston, September 18.—There is some improvement in all lines. Wholesalers and jobbers report collections coming in better than for some time. Retailers report no change and business in their line dull.

Savannah, September 18.—Trade and collections for the week are reported fair. An increase is shown in receipts and a decrease in shipments of naval stores. The market is quoted firm and spirit prices are tending upwards.

Atlanta, September 18.—Hardware and groceries report good trade. There is also a good demand for boots and shoes. Country collections have improved.

Augusta, September 18.—Continued improvement is noticed in the demand for staples. Collections are fair. Cotton is being rapidly gathered and marketed. General retail trade does not improve very much.

Jacksonville, September 18.—No change is noted in business conditions.

Birmingham, September 18.—No material change is noted in the state of trade. Collections are slow. There is some little improvement so far over last month.

Chattanooga, September 18.—Business during past week has been very good. Dry goods men have made big sales. Bankers are lending as little money as possible, and then to only regular customers. Deposits to some extent are falling off. The corn crop will be short.

Nashville, September 18.—The volume of trade and collections continues good. The disposition to let out funds at the first of the week did not last. The money market is limited, and the policy is one of collecting. Eastern money is offered, but at local rates.

Memphis, September 18.—General trade shows a slight improvement, especially in groceries and boots and shoes. Collections only fair.

New Orleans, September 18.—The week opened with no important commercial failures. The banks have not restricted commercial loans nor denied any other legitimate requirements. Confidence is promptly restored and a good order trade continues. Collections are fair and likely to improve. Cotton is moving freely and meeting a ready sale. Rice is quiet but steady. Receipts are absorbed. Not much is doing in sugar.

Galveston, September 18.—Business shows some improvement and collections are coming in rapidly. The cotton season is expected to be practically over by November 1.

Pacific Coast.

San Francisco, September 18. Business is quiet in commercial lines. Wheat is more active and freights are firm at 30s. Wine grapes are advancing. Hops are in light demand. Exports of barley are heavy, principally to Europe. Hides are in good demand and prices are higher.

Portland, September 18.—Business generally is quieter than last week. Hops may improve in price. Willamette valley farmers seem to be freely selling their wheat at present market quotations. Not much coming in from other districts.

Seattle, September 18.—Trade is better this week and collections easier. Heavy rains have caused some damage to grain crops and interfered with harvesting, but altogether trade has been stimulated, though the seed business is not as active as anticipated. Alaska business continues good, and returning miners report a good season's work.

Tacoma, September 18.—Business has a better tone as compared with last week, but the improvements are slight and considered temporary and due to local causes.

Canada.

Toronto, September 18.—Wholesale trade is less active this week, and values of staples are generally firm. Cotton goods are higher. Wheat is moving more freely and is higher.

Montreal, September 18.—The Montreal Exhibition has caused a stir among city retail dealers, and some jobbers report a little more life in the warehouses. The provincial fairs held during the week have been successful, but the jobbing trade generally has not been much benefited. No special trade features are noted. Purchases continue to be for immediate wants, and the situation from a manufacturer's standpoint is a waiting one. The coming winter is not likely to show any great activity, but rather the reverse.

Halifax, September 18.—There is little, if any, improvement in general business. Provisions are extremely dull. There is a good yield of fruit and the quality is excellent. Reports from Newfoundland indicate considerable activity in mining circles, and the hay and potato crops are said to be unusually good. Numbers of people, however, are leaving the colony. Business in St. John, N. B., is quiet and featureless, with but little variations in prices. Shipments of lumber continue small. Prince Edward Island reports unusually good grain and hay crops throughout the island, and there is also a large yield of fruit this year.

Dry Goods.

The fall demand for seasonable goods is more marked, and buyers are taking hold quite freely to meet pressing needs. The jobbing business exhibits more life, and this reflects in first hands Cotton goods are getting reduced in stock, the former surplus being more or less absorbed, outside of print cloths. Values of raw cotton rule high, and most manufacturers are advancing the price of their goods. Production continues largely curtailed, but by degrees the mills are being started under the better conditions apparent. Printed fabrics are attracting more attention, and a steady fall movement is in progress. Ginghams are firmer, but trade rules quiet. Dress woolens are quiet with mill agents, and business booked is slow, as a rule. Some things sell well, but they are the exception. Men's-wear woolens are quiet and spring orders are backward. Cheap fabrics have met with most demand.

Wool.

Business shows more activity. The bidding for territory wools by English buyers has started up American manufacturers, who are apparently not disposed to let the wools go out of the country until they have seen them and found out if they are what they need. The week's business in Boston foots up over 5,500,000 pounds, over 3,000,000 pounds of which is of territory wools. The latter wools were bought mostly in blocks of from 100,000 to 500,000 pounds each, and were taken by large manufacturers, largely because the latter feel that now is a good time to buy. The close shows a firmer tone, although about the only advance is in the fact that holders will cut the price less in order to move a large line. The stock of territory wools is very large, but many million pounds more could have been sold if holders would have accepted bids that three weeks ago they would have been glad to sell at. More confidence is apparent, and the feeling is that a turn for the better has come to stay, with the tendency upward. Medium fleeces are firmer, London auction sales open September 22, and auction sales of East India wool commences in Liverpool September 21.

SOUTHERN PORT GRAIN EXPORTS.

The Baltimore *Manufacturers' Record* has, by the permission of the Chief of the Bureau of Statistics, been permitted to compile in his office in advance of the government publication the total exports of grain from southern ports for the twelve months ended August 31, generally known as the crop year. These figures are as follows:

	1895–96.	1894–95.
	——Flour, barrels——	
Baltimore	2,786,390	2,511,483
Norfolk	18,689	44,052
Newport News	1,415,241	1,087,195
Beaufort	20,567	83,783
Charleston	500	75
Savannah	....	25
Pensacola	18,520	43,994
Mobile	55,620	1,868
New Orleans	160,388	78,940
Galveston	49,158	61,705
Key West	36,309	42,387
Totals	4,567,188	3,955,507
Total from entire country, partly estimated for August	15,000,000	....
	——Wheat, bushels——	
Baltimore	4,226,281	5,442,589
Norfolk	....	217,293
Newport News	95,116	2,519,044
Beaufort	....	50,000
Charleston	....	....
Savannah	....	....
Pensacola	....	....
Mobile	....	....
New Orleans	1,756,902	1,510,745
Galveston	330,680	53,055
Key West	....	....
Totals	6,408,979	9,792,726
Total from entire country, partly estimated for August	63,000,000	....
	——Corn, bushels——	
Baltimore	19,018,914	5,579,046
Norfolk	10,116,960	2,058,242
Newport News	8,233,373	5,674,384
Beaufort	417,859	85,000
Charleston	....	....
Savannah	....	....
Pensacola	115,528	12,875
Mobile	1,602,980	93,161
New Orleans	21,148,393	2,775,014
Galveston	5,138,196	....
Key West	21,587	20,842
Totals	65,819,790	16,298,564
Total from entire country, partly estimated for August	94,000,000	....

"The most striking fact brought out in this table is that of total corn exports from the United States for the past year of about 94,000,000 bushels, 65,800,000 bushels went from southern ports, while of the 15,000,000 barrels of flour exported nearly one-third, or 4,567,000, were shipped from southern ports. Reducing the flour to bushels, and the total exports of grain from southern ports for the twelve months was about 95,000,000 bushels, against 45,000,000 bushels for the preceding year, showing a gain of 50,000,000 bushels.

"Comparing the exports of corn by ports, New Orleans shows the phenomenal increase of from 2,700,000 bushels in 1894–95 to 21,148,000 bushels for the past year. Norfolk and Newport News, which are practically one and the same port, as they are both on Hampton Roads, shipped this year 18,300,000 bushels, against 7,600,000 bushels last year. Galveston, which made no corn shipments last year, has sent out 5,138,000 bushels this year. Mobile's corn shipments advanced from 93,000 bushels to 1,600,000 bushels, and Pensacola's from 12,000 bushels to 115,000 bushels. From Port Royal and Beaufort, S. C., the exports were 417,000 bushels, against 85,000 bushels last year."

ENGLISH IRON AND SPANISH ORE.

The Philadelphia *Press* says: "The British Iron and Steel Institute held its autumn meeting a week ago at Bilbao, in Spain. English ironmasters have a natural interest in the Bilbao mines, from which they receive a larger share of their ore than from any one region, over one-third of the ore used in England coming from Spain.

"But this is not the immediate cause which drew the Iron and Steel Institute to Bilbao. The Spanish mines give signs of early exhaustion. Up to 1870 the blast furnaces of England used English ores almost exclusively, and Great Britain made half the world's iron, or 5,230,000 tons out of 10,550,000 tons. To-day England makes about a fourth of the world's iron, or in 1895 7,800,000 tons out of 29,000,000 tons, and the English ores are no longer equal to the demand of English furnaces or fitted for new processes.

"The iron resources of Bilbao began to attract attention about twenty years ago. In 1880 2,732,000 tons were exported, and this rose to 5,708,000 tons in 1890, while the exports from Bilbao this year will reach 6,000,000 tons. This is about three-quarters of the movement of ore from the lake district in a good year like 1892, when Lake Superior ports shipped 8,480,000 tons. No one dreams of exhaustion there; but the Bilbao mines are near their end. The best mines are all opened. Several of them have ceased to yield ore. Even the second-class mines are showing unquestionable signs of giving out.

"As four-fifths of this Spanish ore goes to England, the exhaustion of these mines is a serious matter. Three years ago Mr. E. Windsor Richards made the condition of these mines the text of his presidential address to the institute at its London meeting. In 1892, he pointed out, out of 6,616,890 tons of pig made in England, 1,800,000 tons, or 27 per cent., were made out of Bilbao ores. The proportion now is still larger. Mr. Richards visited Bilbao, and after a careful examination he reported that, 'with the exception of the large mines owned by the Orconera and Franco-Belge companies, there were no very extensive mines left to be worked.' But for the calcination of spathic ores, an industry recently developed, the Bilbao mines would be near exhaustion now. This process, Mr. Richards held, had extended 'the life of the district fully ten years.'

"Beyond that time no one now cares to predict that the Bilbao mines will yield much. Spain has no other extensive deposits. Mr. A. P. Wilson, at the Brussels meeting of the institute in 1894, summed the current exports from south Spain as reaching 633,050 tons in 1892. A portion of the Murica, Almeria and Malaga mines, he said, were equal to the Bilbao, but 'all their workable deposits at present known do not contain more than one-half the quantity of ore once available in the Bilbao mines.'

"While American ores grow steadily cheaper and the Mesaba discovery has revolutionized prices, English prices of ore rise, and in ten or fifteen years English ironmasters must go a considerable distance for ores. The London *Times* says on this subject:

"'No greater disaster could befall the iron trade of Great Britain than the failure of supplies of cheap and pure Bessemer ores. Unless we are in a position to continue the importation of such supplies we shall be compelled to reduce the output of iron used in the ordinary steel manufacture, and this would probably mean that the United States, which have within their own borders the practically unlimited supply of such ores, would have a hold in the markets of the world, and, perhaps, even in our own, to which they have not hitherto pretended.'

"With ten years of Spanish supplies in view, the London *Times* does not deem the problem one of 'great urgency,' but cheap coal, coke and iron ore together are likely in the next five years to put American iron products in a position which will vindicate the policy of protection before the world. In 1892 the United States produced 16,296,666 tons of iron ore out of 53,000,000 tons produced the world over. In our next expansion now near our production will touch 20,000,000 tons, and the day when England's iron product stops increasing and begins to shrink is now not ten, perhaps not five, years distant."

THE SITUATION IN MADAGASCAR.

The London *Times* says: "A gentleman who has just arrived in England from Antananarivo has made a statement with regard to the situation in Madagascar. He says: 'The island is in a condition of anarchy from one end to the other. Just before leaving the capital I had an interview with M. Laroche, the resident-general, who was fully sensible of the serious nature of affairs, and admitted to me that things were very bad. When I left there was very much friction between the military and civil authorities, which made matters worse. The late Rainilaiarivony, who was for so many years Prime Minister, was, so to speak, the keystone of the arch in the government. The first thing the French did was to remove this, and yet they put nothing in its place. There were a number of men in Imerina who went by the name of "Rayamandreny," the fathers and mothers. They were in constant communication with the Prime Minister, and were by him held responsible for good order in Imerina, and this there mostly was. When the French arrived the function of these fathers and mothers was suspended, and there were none put in their places. I have no hesitation in saying that if these had continued in power the outrages at Avironimano and the murder of the Johnsons would not have taken place. Robbers we have always had with us, but there were always the local governers in the larger towns. These had mostly a few soldiers with them, who were generally sufficient to keep the robbers in check. During the late war a large number of soldiers deserted from the Hova ranks, and, taking their guns with them, joined the robbers. Then there was the old heathen party—the anti-Christian one. In almost every town in Imerina there were some of these. They had never accepted Christianity, and the coming of the French, the removal of all authority, the arrival in their several towns of these bands of marauders, has been their hour of darkness, and they have taken advantage of it and have made common cause with the robbers for a common purpose. Thirdly, there was the anti-foreign element, always, be it known, existing in Madagascar, and, I might also say, in a greater or less degree, existing in the mind of every Malagasy. Of these three classes, then, are these robber bands composed. Those who sympathize with them are a small minority of the people in Imernia, for it is a fact that these disturbances and riots have always come from the least civilized tribes, and very few either of the Hovas or the Betsileo take any part in them except under compulsion. I am of opinion that it will be a long time before order is restored, and fear that for many a day, in the center of the island, Antananarivo and the few other towns where there are French troops will be the only places safe to Europeans.

"'With regard to the future of mission work in Madagascar, I have no doubt it will be very much interrupted. Some 300 or 400 churches have been burnt by the rebels, and many church officials have been put to death. It must be remembered that very few of the educated and civilized people are taking part in the disturbances, and if once the French are able to restore order in the country things will very soon return to their normal condition, as a large number of people in the central provinces are sincerely attached to Christianity.'"

THE MISSISSIPPI RIVER COAL TRADE.

The *Engineering and Mining Journal* says: "The Alabama coal operators have been for some time working to extend their trade to the southward. Shipments of coal to Mobile and Pensacola for steamship use and for export to the West Indies and South America have been made regularly for some time, and are reported to be increasing. At present they are making an effort to secure a share, if not the whole, of the trade of the lower Mississippi, which is of considerable importance. The Southern Railroad has arranged to carry coal from Birmingham to Greenville, Miss., at moderate rates, and a barge line has been organized to run from that point to New Orleans. There seems to be no reason why this plan should not be successful. The rail haul from Birmingham to Greenville is 290 miles, but the Alabama mines are as well situated in this respect as most of those in Kentucky and West Virginia, which have heretofore supplied this market, and in certainty and regularity of navigation the Greenville shipments have much the advantage of the Pittsburgh, and even of the Kanawha, W. Va., district, since there is always water enough for coal tows below Greenville, and the river is not closed by ice in the winter.

"The Pittsburgh district, which years ago had the monopoly of the coal trade of the Mississippi, has been gradually losing it. The uncertainties of navigation in the upper Ohio and the opening of new districts have seriously interfered with the markets, and its share of the business has been, with some variations from year to year, decreasing. It looks very much as if the Pittsburgh miners would soon be confined to the cities on the Ohio for their river sales, and even there they must meet the competition of the Kanawha operators and of the rail-borne coals of Ohio and Kentucky, which are free from the contingencies of low water."

BRITISH IRON AND STEEL INSTITUTE.

The *Iron and Steel Trades Review*, London, says: "During the present week the Iron and Steel Institute has been holding its autumn meeting at Bilbao, in the north of Spain. The proceedings at the old Viscayan city have been extremely hospitable and cordial, as one might have expected. The time was when Spain was a great power, more akin to our own than any other then existing power in Europe. The two nations have often crossed swords, and the fitting out of the invincible armada which came to grief in Elizabeth's days was only the culminating point of many a conflict for territory and supremacy which we have waged with this proud and high-spirited people. Since then, however, Spain has fallen on evil times. Her colonies have largely been lost to her; her industrial supremacy has been reduced to a mere shadow; her political status has become that of a third-rate power only, and she no longer has any voice worth speaking of in the councils of Europe. As a factor in industrial affairs, the peninsula had ceased for many years, until a comparatively recent date, to count for anything. But, thanks to English enterprise and example, the hidalgos are reasserting themselves. The mineral riches of the country, almost wholly neglected since the days of the Roman occupation, have, within the last generation, had a new birth. This renaissance has chiefly been witnessed in the mining of the iron ores of Bilbao and the sulphur ores of the Huelva region in the south of Spain. Copper, lead, silver and other minerals are being worked to a certain extent elsewhere, so that to-day Spain is one of the most important mineral producing countries on the continent of Europe. With the renewed consciousness of possessing great mineral wealth has arisen a natural desire to apply that wealth to industrial uses. Hence, as we have set forth in previous issues of the *Review*, the last few years have witnessed a considerable development of the iron industry, more especially in the Bilbao district, which is now being examined by the members of the Iron and Steel Institute, although possibly with a good deal more interest than profit. The truth is that we cannot quite see where the practical man has much to learn in Spain. The mines are mere examples of successful quarrying; the inclined planes and aerial rope railways are special applications of well-known engineering experience suited to particular cases; the blast furnaces and steel works are modern, but nothing more; and there are no special processes or circumstances that can be brought back and utilized in our own country of which we have any knowledge. The occasion, therefore, has less of practical interest than usual, except in so far as it may show to our ironmasters the necessity for going farther afield if they are to continue the import of iron ores on a large scale, in order to fill up the hiatus which is threatened at Bilbao.

"The most likely source of Spanish iron ore supplies in the future is the south of Spain, and in that region there is no more promising field than the Calasparra mountains, which are nearly 100 miles from the shipping port of Carthagena. Allowing an average cost of 4 pesetas, or 3s. 4d., for hauling the ores over this distance, experts have computed that it can be delivered f. o. b. at Carthagena for less than 8½ pesetas per ton—say, 6s. 8d. This is not an impossible price, and, as the ore is exceptionally rich, it should be such as to lead to the development of a considerable business. According to the mode of computation at Carthagena, the value of the Calasparra ores at that port should be about 11 pesetas per ton, to which is added a share of the dispatch money, which, by an old custom at that port, is always divided with the shipping agent. On the same coast there are large and better-known deposits of excellent ore at Almeria and Malaga, so that there is no need to apprehend that the exhaustion of the Bilbao deposits will lead to another exclusion of the English from Spain. But the south of Spain is always less certain in the matter of freights than the north. There are, on the other hand, excellent harbors at most of the Spanish ports on the Mediterranean seaboard—at Malaga, Almeria, Alicante, Valentia and Carthagena—so that the shipment of ores would present no difficulty from this point of view. If the freights could be kept as low as those from Bilbao, the English iron industry would have no need to trouble about iron ore supplies for many years to come."

GERMANY'S TREATY WITH JAPAN.

The Berlin trade paper *Kuhlow's* says: "The new commercial treaty between Germany and Japan, which was ratified by both governments on April 4, is hailed with great satisfaction by the German manufacturers. The last two years have been characterized by a vast increase in the German exports to Japan, and it is believed that under the new treaty the German trade with the Island Empire can be developed to still greater extent, at least in several important articles. The German total export to Japan, which averaged from 1892 to 1894 18,000,000 marks annually, reached the figure of 27,000,000 marks in 1895. The bulk of the tonnage is made up of iron and ironware. The following table shows the quantity of the principal iron articles exported directly from Germany to Japan during the last four years:

	1892–93.	1894–95.
	——Metric tons——	
Rails and rail fastenings	1,360	5,434
Bar and angle iron	21,546	37,172
Plates and sheets	635	1,528
Wire	7,364	8,353
Bridge iron	304	1,819
Wire rope	11	121
Springs and axles for railroad cars	191	487
Wire nails	23,968	25,891
Needles	10	12
Fittings for clocks and watches	23	118
Other iron ware	597	460
Locomotives, piece	141	186
Cars, piece	196	206
Cast iron machinery	538	911
Cartridge	3	159
Zinc, raw and rolled	2,290	4,059

"Especially notable in these figures is the enormous quantity of wire nails which Germany exports annually to Japan. In fact Japan is, after Great Britain, Germany's best customer in this line, and it still wants more.

"It is now reported on the best authority that a wealthy Dutch syndicate intends to establish factories of different kinds in Japan in order to take advantage of the cheap labor to be had there, wages in that country ranging from 20c. to 25c. a day."

In the United States about 77 per cent. of the total number of concerns failing had $5,000 or less, and 12 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

INSURANCE.

1850.——18[illegible]6.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, SEPTEMBER 26, 1896.

Additional arrivals of gold from Europe during the present week raise the total already imported since the beginning of the present specie movement to over $31,000,000, while, counting the amounts already here and those on the way, so far as known, the aggregate fairly reaches $40,000,000. Among the incidents in this connection was the announcement that $2,500,000 gold was expected to arrive at San Francisco from Australia. This last-named sum, it was announced, would be turned into the local Sub-Treasury in exchange for legal tenders, and, in connection with the continued deposits of imported gold at New York, would bring the Treasury gold reserve up to about $125,000,000. Owing to the fact that all such amounts are not immediately taken into the accounts, the official figures at the close of this week make the free gold in the Treasury apparently only $119,700,000. The increase in the Treasury gold from $101,000,000 to the figures given above has certainly been one of the best results of the movement, though the exchange of the major part of the imported specie for currency and its distribution to points at the interior, where funds were needed in connection with the crop movement, has not been of less practical importance. The weekly statements of the New York banks since the specie arrivals began would, indeed, indicate that this was the disposition of all but a small portion of the entire sum.

The relaxation of the money market stringency during the present week makes it of less importance whether the action of the Bank of England apparently intended to check the flow of its specie to this country will be effectual or not. Since the movement to New York began that institution has lost some $31,000,000 gold and the Bank of France about $16,000,000. In neither case, however, has it all come to this country. The existence of such a demand on the part of the United States, due to the high rates for money combined with the increased export movement of our products, has produced this advance of the Bank of England discount rate to 3 per cent., the rise of ½ per cent. a fortnight ago being followed by a similar step on last Thursday. It is, however, remarked by the leading English financial papers that the Bank of England's command over the London money market is far from complete, and the current discount figure there even after the last advance in the bank rate is only 2¼ per cent. A reaction and firmer feeling in exchange here, with the possibility that the better condition of our money market may result in the resumption of mercantile remittances abroad, seems likely to be more effectual in checking the inflow of specie from Europe, although under present conditions the expectation of bankers is that it will not cease entirely, but at the most will be upon a smaller scale, while the possibility of a renewed foreign demand for our securities might cause a further heavy movement of gold this way.

The political forces in the campaign now on are rapidly taking up their positions for the closing weeks of the struggle, and the fervor and fever of the campaign are reaching their height. Both of the leading candidates have been making addresses, but while those of Mr. McKinley have been confined to replies to delegations visiting him at his home, those of Mr. Bryan have been addressed to gatherings scattered along an extensive pilgrimage, taking in many states. His latest appearances have been in the middle and eastern states, where, seemingly, his chances of securing electoral votes are very slight indeed. Among the most important recent events of the campaign has been the nomination of a second Democratic candidate for governor in the state of New York in opposition to the nominee of the Buffalo convention, and the announcement of a determination by the adherents of the Indianapolis platform to support only sound-money men for Congress and the state legislature. Senator Hill, has broken his long silence in a meeting of the state committee of the regular organization so far as to indicate that his attitude in relation to certain planks of the Chicago platform remains unchanged.

The iron trade to-day in several of its principal branches shows some improvement over the conditions that have ruled for the past three months, but the improvement has been more in feeling than in figures. Several lines have reported increased activity during the past few weeks, mainly because restricted production has had its effect on the visible supply, although stocks are still large. Pig iron has shown the most marked improvement of any branch of the market during the past few weeks. This has been caused mainly by the general impression that the bottom has been reached and that the next material change must bring an advance in prices. During the past three months the lowest figures ever seen were reached in the pig-iron market. Prices were about at the cost of production. An eastern combination of capital entered the market and made offers for large lots which at once had the effect of making holders stiffer, and offers were refused. This caused the buying side to show more interest, consequently within a few days there was much more interest manifested in the market. As yet, however, this interest has had but little effect on prices, although it is the general belief that higher prices are close at hand.

An examination of the statistics shows that while stocks have increased during the year, production has fallen off, and is now much below the requirements of normal consumption. At the beginning of the year the total stocks of pig iron reached 600,000 tons. They now aggregate 1,100,000 tons. When the year opened the weekly production was at the rate of 220,000 tons per week, but at the beginning of September the weekly production was 132,000 tons. The stocks are held at the furnaces, but there is practically no pig iron in the hands of consumers, for the reason that for several months past buyers have been providing only for immediate wants. The present show of increased interest in the market is due mainly to this fact. Then there is the general impression that the present campaign will result in an indorsement of sound finance, and this gives the market a better tone.

The Bessemer steel market has for some time past attracted considerable attention, as it has been the latest branch in which manufacturers have endeavored to fix and sustain prices by mutual agreement. When the association decided to put the price to $20 the speculators held stocks which have since depressed the market. For several months the blooms in the hands of brokers were sufficient to supply all demands, consequently the manufacturers could do nothing more than stick to their figure. Within a short time past, however, it has become evident that the material in brokers' hands had about run out, and makers now have the market to themselves. The association rate is being fully sustained and the indications are that it will stand. The united action of the manufacturers has also brought up prices of open-hearth steel, which is fast becoming a greater factor in the market. The signs of renewed activity noted in the pig-iron trade are not observable in the market for finished products. There has been no change in the extremely low prices that have ruled for several months past. The railroads, the greatest consumers of iron and steel, have been very careful in their expenditures during the past quarter, and their close economy has been felt in the market. The most demand was shown in the structural steel trade, the season for which is about closing. The bar-iron trade and the sheet-iron and steel market have been greatly depressed, but in all branches the opinion now prevails that a material and permanent improvement will soon set in.

Before adjourning at St. Louis the American Bankers' Association adopted an amendment to the constitution in accordance with which trust companies are to be admitted as members of a section of the association. The president was authorized to appoint a committee of five to devise means to prevent alterations of forgeries of bank paper. The work of this committee is to be auxiliary to that of the standing protective committee, and is expected to produce very useful results. One of the features of the session just closed was the participation taken by the delegates generally in the proceedings of the convention.

Attention abroad continues to be concentrated upon the situation in Turkey, which remains to external eyes just as obscure as ever. The announcement was made late this week that the diplomatists at the Ottoman capital had been directed to suspend their conferences upon the Armenian question, inasmuch as direct negotiations upon the subject are pending between the Porte and the powers themselves. The expressions of protest against the action of the Turkish government still continue, particularly in England, where one of the picturesque and striking incidents of the agitation has been the appearance of the venerable Gladstone as a leader of public opinion on the subject. At a mass meeting held at Liverpool, Mr. Gladstone proposed resolutions setting forth that the meeting trusted that the government would do everything possible to obtain for the Christians in Turkey a full measure of security and protection, and declaring that the government would have the fullest public support in whatever steps it might take to put a stop to the atrocities. The veteran statesman declared that the diplomats at Constantinople had failed to make the Sultan fulfil his treaty obligations, and he urged that the British government should sever diplomatic relations with the Porte and announce that it intended to consider means of enforcing its own just demands. This action, he declared, would not precipitate a European war.

THE OUTLOOK FOR WHEAT PRICES.

The strength of the wheat market during the past few weeks, as compared with the indifference with which it was regarded by traders at home and abroad for months prior thereto, and as contrasted with the weakness and tendency to depression in prices which marked the preceding year, appears based only in part on the reported shortages in some exporting countries.

There appears little doubt that the more important importing countries, notably the United Kingdom, have long felt an indifference to the question of maintaining what may be called normal supplies in Europe and afloat therefor. This was shown by steadily decreasing stocks afloat for and in Europe for months past, the total at recent dates being about one-half what it was at corresponding dates in preceding years. But now that exports of wheat (flour included as wheat) from both coasts of the United States have for several months been steadily larger than in corresponding weeks one and two years ago, it is evident that foreign buyers, particularly in view of shortages of crops in exporting countries, have awakened to the necessity for increasing available European stocks.

The cry of "wolf" has been heard so many times with reference to a supposed approaching advance in wheat prices in preceding years, that anything in that nature seems likely to be of little effect at this time. Yet, reports from the wheat districts of Russia, from India and elsewhere in exporting countries, together with those from the United States, are not such as to encourage a bearish view of the outlook for prices. The comparative scarcity of grain room on the Atlantic coast, and increasing shipments from Pacific ports, not only to Europe, but to South Africa and Oriental points, together with large totals of wheat shipped each week, point to the probability of more activity in wheat throughout the world this autumn than for several years.

In view of this, consideration of the statistics of prospective available supplies of wheat in the United States possesses more than ordinary interest. In order to give the widest latitude to any discussion of this character it is proposed to accept what may be regarded as more conservative trade estimates of domestic wheat crops in the past two years, rather than the official reports of the same, in view of the manifest understatement of the totals of those crops by the Agricultural Department in the past five years. Even with the extra allowance in the matter of supplies which such totals furnish, the outlook must remain the reverse of pleasing to the constitutional seller of futures. Taking the probable total outturn of domestic wheat in 1895 at 515,000,000 bushels, and the net available supplies of wheat in the United States on July 1 that year at 60,000,000 bushels and the total of invisible wheat, that is, stocks back of available supplies in and out of farmers' hands on July 1 last year, at 29,000,000 bushels, we arrive at an aggregate of 604,000,000 bushels of wheat in the United States at the date last named. Making the usual allowance for domestic consumption of wheat during the year ending July 1, 1896, 325,000,000 bushels for food, 53,000,000 for seed and about 126,000,000 bushels exported, the grand total accounted for is found to have been 504,000,000 bushels, pointing to 100,000,000 bushels, in round numbers, remaining in the country on July 1 last, of which about 61,800,000 bushels were available and in sight, and 39,000,000 bushels elsewhere, in and out of farmers' hands.

If we regard the 39,000,000 bushels last referred to as required at home for reserves at the end of the current cereal year, and the crop this year as amounting to, say, 450,000,000 bushels, there are found available as food, seed, and for export for the twelve months ending July 1, 1897, not more than 512,000,000 bushels, from which must be substracted, perhaps, 378,000,000 bushels for food and seed, gauged by the estimates for last year, which would leave 134,000,000 bushels nominally available for export, slightly more than was sent abroad during the preceding crop year.

With the tendency to send more wheat abroad each week than in like weeks in preceding years, the outlook is that nearly all of the wheat available for shipment abroad between the present time and July 1 next, apparently only about 100,000,000 bushels, will be wanted. Moreover, the recent rate of export will have to be decreased to keep within that limit. Should the government report of the domestic wheat crop this year prove correct (it is interpreted to amount to a much smaller total than that used in this calculation), the prospect would become correspondingly more bullish.

Late advices from Beerbohm, London, on this subject, are as follows: "The Washington Bureau's report for September is decidedly 'bullish' in character, indicating as it does a crop of not more than 410,000,000 bushels—or, in other words, only about 40,000,000 bushels more than is required for home consumption and seed. It is safe to say that if this were to prove correct a decided improvement would result, and the first to be influenced thereby should be the American markets; for such a crop would indicate that the American surplus for Europe would not much exceed 50,000,000 bushels; whereas, from present appearances, it looks as if Europe will require at least 140,000,000 bushels from America. The official estimates of the American crops have, however, been so much below the real truth in the past few years that the trade has become very slow to accept or to act upon these early crop figures."

THE BANKERS IN SESSION.

The twenty-second annual convention of the American Bankers' Association was convened at St. Louis on Tuesday. The gathering has been looked for with very much greater interest than usual, owing to the fact that the leading issue in the presidential campaign now under way is as to what will be the monetary standard of the country. The call for the convention recognized the situation confronting the people, declaring that it was proposed to throw the convention open to the full and free discussion of topics by attending bankers, and not to rely upon set speeches or addresses upon economic questions; the desire of the officers being to have a popular and free discussion of banking problems, laws affecting banks and bankers, and practical everyday questions which come up in a banker's experience. Bankers throughout the country were invited to submit, in advance, subjects of general interest. Attention was called to the fact that we are passing through a critical period of our financial history, and that the best intelligence of the country is needed in the discussion of the important problems which are now before the people. The errors of the past have been so costly that any future legislation needs to be carefully considered from every point of view. It was pointed out that all bankers are interested, both as debtors and creditors, but that they have no interest which is not fully shared by their customers—depending for their existence upon the confidence of the people, and they could not exist if the people did not want them, and that by association, bankers can compare views, gain information, elicit argument, expose fallacies and prepare themselves to promote and defend practical and useful measures in the public interest.

In his annual address President Pullen said that the year had been an eventful one in the history of the association, there having been an increase of over 600 in its membership. As an indication of the attitude of the association in the present contest, Mr. Pullen directed attention to its past history. The association had stood, he said, during its twenty-two year's history, for honesty—individual honesty, official honesty, national honesty. It has always stood for honest money—for an honest dollar, worth 100 cents, and accepted as such in all the markets of the world. In the past it has boldly, unhesitatingly and repeatedly given utterance to these views—it has issued its declarations in print and scattered them broadcast all over the land. It would, he said, occupy the same position to-day, and, far from desiring to modify its past record, should confirm and reiterate it with emphasis. In times of prevailing business depression, widespread discontent and general unrest, he pointed out, the various elements among the people that in prosperity cannot combine their forces readily coalesce, and dishonest money, because it is dishonest, attracts the disorderly, lawless and revolutionary elements—the socialist, the populist and the anarchist.

Banks, especially national banks, have, he said, recently been assailed by the vituperations of ignorance and passion, but he directed attention to the fact that the banks rallied to the support of the government in the darkest hour of its history and supplied the money necessary to defend its honor and life, and that through the national bank system, subsequently established, a market was opened for United States bonds, yielding the money necessary for the prosecution of the war for the preservation of our Union, and a currency provided that has never been excelled for safety, universal acceptance at par and immediate redemption. Ninety-three per cent. of the business of the country, he added, is transacted by checks and other negotiable instruments, and if the people should eliminate banking facilities, national banks and their circulation and substitute dishonest money as the vehicle of trade, financial chaos would speedily result. Cotton and cereals could not be produced—if produced could not be marketed—transportation would be paralyzed, the wheels of industry would cease to revolve, enterprise and development be checked and the whole land plunged into ruin and misery.

The declaration of principles adopted by the executive council of the association is a clear and strong one. It asserts the belief that the existing commercial depression is immediately due to the attacks which threaten to overthrow the present gold standard of value, and that the full measure of national prosperity will not be gained until the whole world understands that the dollar of the United States is one hundred cents worth of gold and that the nation intends to keep it at that value. It declares that an opportunity is presented by the issue of this political campaign to give a lasting definition of the dollar as a money unit; warns against the rash proposition that this nation should single-handed attempt to legislate silver to a parity with gold at a fictitious ratio; declares that the free coinage of silver means monometallism, with gold at a premium, all other forms of our currency at a discount, and the value of the dollar an uncertain quantity, depending each day upon the gold price of silver bullion, with corresponding fluctuations in the value of all kinds of property, and asserts the belief that before the mints could begin to coin silver every dollar of gold would disappear from circulation, thus violently contracting our currency, and that the value of the remaining dollars would be the bullion value of the silver in them measured by the gold standard of the chief money markets of the world.

The assertion that the gold standard is a device of bankers, creditors and financiers is denounced as utterly false. They have, the address says, no such power in human affairs, and never had. On the contrary, the gold standard is an edict of commerce translated into law. "It was dictated by those who conduct the commerce of the world rather than those who handle the money of the world. It is rooted in a preference lodged in the human breast. Test of the weight of the two metals in quantities of equal value shows how and why traders decided in favor of the money which they could carry with the least burden and use wherever they might go to the best advantage. Gold commands all values because it is the most stable in value. It was not legislated into the world's finance until commerce selected it as a gauge, and it will not be legislated out of use if laws are changed." The declaration is made that mere "money changers" have always found more profit in a fluctuating than in a stable currency, and that one source of revenue which those who thus handle money always had when the money was not stable has been closed up in this country by the influence of the gold standard, and that what they have lost by such revenue has been gained by producers and merchants. Bankers, however, are not mere money changers; they are trusted custodians of the money of the world.

As bankers, the address continues, the members of the association are debtors to the extent of their deposits. They have received these deposits in money as good as gold and desire to return them in money of equal value. It will, however, be impossible for banks, life insurance companies, mutual benefit orders, and building and loan associations to return to their creditors money equal to that which they have received if the currency is depreciated to the bullion value of silver dollars. Bankers have no interest in the metal composing the national standard of value which is not shared by every man who owes a dollar or has a dollar due to him. They desire to have debts due them paid in as good money as they have loaned. They desire to pay their debts in the same way. The banking business is not vitally dependent upon any specific standard or upon any particular kind of currency. It adapts itself to all conditions; but, conscious of the needs of their customers, the bankers earnestly desire to see the country purged of the monetary delusions which drive money out of

the channels of business. A dollar of fixed value in the world's commerce has the power to make markets, sharpen trade, invite capital, develop resources, and extend the national power and influence. A doubtful or depreciated dollar will blight every man's prospects and prove a curse. As bankers, they want the dollar which will do their country the most good, and they commend to all their countrymen the opportunity they now have, and which will decide upon the future value of their dollar, and to remove from the land the menace which has destroyed more values and caused more suffering than war or pestilence.

Reports from the delegates as to the condition of banking in their respective states disclosed in the main favorable conditions, and, as might be expected, there was a general expression in favor of sound money. A proposed rule abolishing restrictive indorsements was referred to the executive council, to be reported on at the next meeting. The practice of the different states touching the payment of depositors' rates was discussed at length, and it was recommended that the association endeavor to secure uniformity of practice in the matter. The necessity for uniform laws governing commercial paper was also discussed, and the subject was referred to the executive council for such action as it may deem proper to secure the desired results.

THE NEW ERIE'S SHOWING.

Promptly after the close of the first seven months of its corporate existence the management of the reorganized Erie Railroad property make public their report of the company's finances and operations for that period. Covering, as the figures thus submitted do, the results of the seven months ending June 30, of the present year, they are not as conclusive or significant as might be desired. Nor, taking into consideration the fact that the removal of the concern from the hands of receivers and the consolidation of its disjointed parts into a harmonious whole has just been accomplished, would it be fair to expect that the showing would afford a true indication of what the company can accomplish in the future under its new and improved conditions. Due allowance must also be made for the fact that the general state of railroad traffic during the time covered by the report has, in the main, been adverse, that rates have been low and competition severe. Under these circumstances it is a matter for congratulation that a property of the extent and importance of the Erie has, during the brief period that has elapsed since the new Erie Railroad has taken the place of the old discredited New York, Lake Erie & Western, and since its former leased lines, the New York, Pennsylvania & Ohio and Chicago & Erie, were consolidated with the present concern, given a good account of its performance, and, that so far as the report shows such facts, its physical condition is in all respects improved. No feature of the reorganization, not even the consolidation of the branches and the creation of a harmonious concern out of the former disjointed system is of more practical importance than the large expenditures which the reorganization plan made possible for the direct improvement and modernization of the working plant and the providing of the facilities so badly needed by the Erie in order to compete successfully for traffic for its powerful and well-equipped rivals among the trunk lines.

The figures presented by the report for the period under consideration compare as follows with those for the corresponding months in 1894–95 :

Seven mos. end. June 30.	1896.	1895.	*Changes.*
Gross earnings.....	$17,017,377	$15,999,709	Inc. $1,017,668
Operating expenses....	12,877,424	12,356,672	Inc. 520,752
Net earnings.....	$4,139,953	$3,643,037	Inc. $496,916

These totals include altogether 2,166 miles, of which 1,608 miles are owned or controlled by ownership of entire capital stock, 201 miles controlled by ownership of a majority interest, 277 miles leased, 26 miles operated under agreement and 54 miles used under trackage arrangements, while 640 miles represents double-track road. The results of the Greenwood Lake Railway are included for May and June only, the line having been leased from the first of the former month, and the New York and New Jersey companies' operations are not included at all.

It will be seen from the figures that the gross earnings of the lines included in the report during the seven months increase 6⅓ per cent. over those results in the like period of the preceding year, while the operating expenses were 4¼ per cent. greater. The proportion of operating cost to gross, it is satisfactory to note, was 75.67 per cent. against 77.23 per cent., and principal items of expenditure, including maintenance of way and maintenance of equipment, show considerable increases, indicating that the new company is not inclined to economize at the expense of either permanent structure or rolling stock for the sake of making an unduly good showing at the outset of the company's career. The net earnings, however, increased 18.64 per cent., which, all things considered, is a satisfactory exhibition. It must, however, be remembered that the summer and autumn seasons are the best for the company's business, though the depression which exists at present, and seems likely to continue till after the November election, is more than likely to have an unfavorable effect on the company's current performance. The income account is necessarily brief, and is not open to comparison with the items of any preceding year, but the interest and rentals paid amount to $4,413,790. The net earnings from operations were, it will be noted, $4,195,499. Receipts from other sources, however, swelled the available net revenue, so that the credit to profit and loss at the end of the seven months was $151,709. It is gratifying to notice that the company is free from floating debt, and that cash and cash assets amount to $4,973,913, against current liabilities of $3,840,498.

The traffic statistics of the new Erie show a total tonnage of freight amounting to 11,406,058 tons, an increase of 3,328 tons, but the number of tons hauled one mile was 2,156,593,594, an increase of 128,868,240, or 6⅓ per cent., while the rate per ton per mile, 0.588c., shows the fractional gain of $^{4}/_{1000}$c. per ton per mile, and the total freight earnings, $12,687,557, make an increase of no less than $843,719, or 7⅛ per cent. This result, under the generally adverse conditions that have prevailed since the end of last winter, is a particularly encouraging circumstance. The number of passengers carried was 7,626,986, an increase of 170,965, or 2¼ per cent., and the number of passengers transported one mile each was 186,070,922, a gain of 6,341,775 passenger miles, or 3½ per cent. in that item. The average passenger fare per mile is stated at 1.668c., an increase of $^{5}/_{100}$c., and the total passenger earnings are given as $3,104,351, an increase of $197,227, or 6¾ per cent.

A FIAT MONEY EXPERIMENT IN THE PAST.

Thoughtful students of history who have noted not without concern the arguments made in defense of silver fiatism in the course of the present campaign have naturally had recalled to their minds the melancholy story of the assignats under the French revolutionary régime at the close of the last century. At that time a currency plan, based upon demands and theories which have been made familiar by the recent spread of populism, was adopted by the French legislative authorities and carried through to its logical conclusion with results which should furnish an admonition to succeeding generations of statesmen. The story of this financial experiment is, of course, familiar to students of economic history, but it is important that it should be made as widely known as possible to the people at large, and a distinguished American citizen, who has made a special study of the period, has done a public service in reprinting, in pamphlet form, a paper read by him twenty years ago before a meeting of senators and representatives of both parties in Washington, which paper was based upon a lecture to University students, prepared many years before. We refer to the brochure entitled, "Fiat Money Inflation in France," by Dr. Andrew D. White, which has just been issued from the press of the Appleton's.

For the purposes of the readers of these columns, the story of the inflation, and its results, may be briefly summarized here. Near the close of the year 1789, the French nation found itself in deep financial embarrassment, there being a heavy debt and a serious deficit. Projects to meet the situation were not long lacking; the idea was set afloat that the great want of the country was a larger circulating medium, and this was followed by a demand for an issue of paper money. Careful financiers who had not forgotten the experience under John Law's scheme, endeavored to turn the nation from the project, but they were unsuccessful. Early in 1790 the Finance Committee of the National Assembly reported that the people demanded a new circulating medium, and recommended a paper money circulation as the best expedient. As the result of a debate, of which one of the keynotes was the sentiment "Let us show to Europe that we understand our own resources," it was resolved to issue 400,000,000 francs of paper notes, known as assignats. The issue was to be carefully guarded and secured by the landed property of the nation, mainly consisting of the confiscated property of the church. The notes bore interest at 3 per cent. The first effects of the issue were apparently encouraging. There was a temporary revival of trade, and the speeches of the sciolist orators seemed to be borne out against the arguments of the scientific statesmen, who foretold disaster from the issue, owing to the impossibility of restraining the nation on the downward path of inflation. Financial stress confronted both government and people by the end of August, and a demand for another paper issue was made. The assignats had begun to depreciate, and the opponents of a paper issue directed attention to this fact, but the advocate of the scheme declared that the assignats were not at par, because there were not yet enough of them. The sage Necker attempted to stem the tide, but in vain, and France lost his services. The commercial centers sent up remonstrances against a new issue. All was in vain. At the end of September a new issue of 800,000,000 francs was ordered, mainly as the result of the eloquence of the famous Mirabeau, who had before then condemned paper issues. Provision was made for the burning of assignats paid into the Treasury for land, and it was provided that the whole amount issued should not exceed 1,200,000,000 francs.

In spite of the action taken the cry for "more circulation" was again heard. Notes that should have been retired were not, but were reissued under the plea of necessity. In June, 1791, 600,000,000 francs more were issued in spite of the previous pledge not to exceed the amount fixed. This issue was followed by an immediate depreciation of from 8 to 10 per cent. in the value of the assignats and specie was fast disappearing. The cry was raised that English emissaries were instilling notions hostile to paper. The temporary stimulus to trade was followed by a decline. Uncertainty as to the value of the paper money checked enterprise. Stock gambling and speculation took the place of legitimate business. In December, 1791, a new issue of 300,000,000 francs was ordered, and in April, 1792, another of like amount. Before this assignats were over 30 per cent. below par. Subsequent issues followed, till by the close of the year 3,400,000,000 francs had been issued, of which 2,800,000,000 were in circulation. Meanwhile prices were rising to correspond with the reduced purchasing power of the new money; that is, prices of everything except labor. As a means of limiting the rise of prices, maximum laws were passed; that is, laws making sales of goods compulsory, and fixing their price in paper money. The legislators of France finally seemed to come under the dominion of the political economy of the market women of Paris, who demanded that "laws should be passed making paper as good as gold." Laws were passed punishing with imprisonment for twenty years persons who should sell assignats at less than their nominal value, and making investments by Frenchmen in foreign countries punishable with death.

These measures could not, however, stay the depreciation of the assignat. At the beginning of 1796 over 45,000,000,000 francs in assignats had been issued, and by that time the value of the assignat had fallen so that a gold Louis of 25 francs was worth in the market 7,200 francs, or 1 franc in gold was worth 288 francs in paper. Prices went up in proportion. Some accounts speak of sugar as being 500 francs a pound and soap 230 francs. Carriage hire cost 6,000 francs a day. Historians record that the laboring classes were the ones to suffer most by the depreciation of the currency. Before the end of the year 1795, Von Sybel records, the paper money was almost exclusively in the hands of the working classes, employees and men of small means whose property was not large enough to invest in stores of goods or national lands. The Directory, which came into power in October, 1795, at first printed more paper money, then ordered a forced loan, and finally decided to break up the copper plates of the assignats and to issue a new paper money, the so-called mandats.

In spite of measures taken to bolster up the value of the mandats, including the making them legal tender and substituting them for assignats at a fixed rate, they fell to thirty per cent. of their nominal value even before they could be issued from the press and soon after they fell to 5 per cent. of their nominal value. It was when they

were at this stage that the decree was passed July 16, 1796, which put an end to the paper-money system by providing that all paper money should be taken at its real value, and that bargains might be made in whatever currency the people chose. The whole vast issue was repudiated. When all was over with paper money specie began to reappear, at first in small quantities, sufficient, however, to transact the business which remained to be done, and subsequently in larger quantities, as trade demanded it, and so France's long financial debauch came to an end. The story is one which deserves to be retold, as it has been by Dr. White, for few chapters of financial history carry so much warning under conditions such as have gradually been maturing in the United States, and when a step in the direction of fiatism such as that involved in the free-coinage project is seriously proposed.

THE PRODUCTION OF SILVER.

To the Editor of BRADSTREET'S:

SIR—How does Mr. Atkinson figure out that the Broken Hill, Anaconda, and Huanchaca silver mines produce "about a third or more of the increasing annual product of silver bullion, now 175,000,000 ounces," as stated in BRADSTREET'S, September 5? According to his own figures, the average product of the Broken Hill mine is somewhat in excess of 10,000,000 ounces per annum. Montana's average silver product, 1892 to 1894 inclusive, was 15,700,000 ounces and Bolivia's 16,450,000 ounces. Now, if the Anaconda and the Huanchaca mines yielded all the silver produced in Montana and Bolivia (which is far from being the case), this would be only 42,000,000 ounces. From the best data I have been able to obtain, it appears that the three mines cited by Mr. Atkinson are producing an average of about 30,000,000 ounces or only about one-half as large a proportion as Mr. Atkinson estimates.

HERBERT MYRICK,
Editor American Agriculturist.
New York City, Sept. 21.

To the Editor of BRADSTREET'S:

SIR—Your correspondent, Mr. Myrick, is quite right in calling attention to an error in my computation of the proportion which the product of the Broken Hill mine, of New South Wales, bears to the total product of the world. This is the second error in which I have been detected in the last three months, the previous one being immaterial. I reversed my divisor. I ought to have stated that the product of the Broken Hill, which in recent years has averaged twelve million (12,000,000) ounces, last year being reduced by temporary causes, had been from seven and a half (7½) to eight (8) per cent. of the total product, not fifteen (15). I had reason to believe that the joint product of the Anaconda and Huanchaca is somewhat more than the single product of the Broken Hill. That would make the product of the three approximately one-sixth, in place of one-third, of the production of the world. By making this error I weakened my own case.

If in the face of declining prices the lesser mines show an increasing product, then what is the necessary implication? Is it not that even under less favorable circumstances than exist in these three great mines silver has been and is still a very profitable product at the recent market price?

On the other hand, I should be glad to see this discussion extended. I have never been satisfied on my own behalf that the recorded product, either of gold or silver, covers the whole product. What is given as the annual product is what is known. How about the unknown? Are there not large quantities of lead and copper ores yielding silver as a secondary product which are treated not only in the reducing works of this country, of which no returns can be obtained, but in the reducing works of Wales and of Germany and other countries? If the known product of silver increases rapidly at the recent market values, how shall we find out what the unrecorded product is? EDWARD ATKINSON.

Boston, September 23.

AMERICAN ENTERPRISE IN RUSSIA.

As England is by far the best customer for Russian manganese ores it will interest British consumers of that important product to learn, as pointed out by the Philadelphia *Record*, that a Russian-American mining and metallurgical company has been organized in Russia, "to be conducted largely with American capital, and entirely under American management." The name of the new Company is given as the Nicopal-Mariopal Mining & Metallurgical Company, and its "paid up capital" is announced to be $2,275,000, gold.

It proposes to secure control of the valuable manganese mines at Nicopal, in South Russia, which are already "under American management," and the ore is to be taken to Mariopal, on the sea of Azov, "where a large steel plant will be erected" under the charge of a former representative of the Illinois Steel Company. It is further explained that the company has already secured the contract for supplying 144 miles (about 10,000 tons) of oil pipe in the Caucasus, and in order to make the delivery in time the company has purchased an entire pipe plant here except engines and boilers, which "is now being shipped to Russia." The pipe is all to be delivered next year. It is added that the Russian-American locomotive works, at Nijni Novgorod, is to be opened as a department of the Sormovo Iron & Steel Works at that place, and the plant to be used has been designed by Paterson and Pittsburgh engineers.

The acquisition of these Russian manganese mines is of great importance. Russia has long been known for its deposits of manganese ore, which are found in the Urals, in the government of Ekaterinoslav, and in Transcaucasia. The most important deposits are, however, those at Sharopan, in the last-named district. These deposits, which were first discovered in 1879, lie in a horizontal plane, and cover an area of 126 square versts, the veins being nearly eight feet thick. The percentage of manganese in the sorted ore does not fall below 50 per cent., while the proportion of phosphorus does not, on the average, exceed 0.16 to 0.17 per cent. Between the mines and the Black sea a line of railway 165 versts long has been constructed, and the conditions under which operations are now carried on are so favorable that Caucasia now supplies fully one-half of the world's requirements of manganese ore. The exports of this ore from Russia have shown a great development during the past eleven years, as will be seen from the following table:

EXPORTS OF MANGANESE ORE FROM RUSSIA.
(One pood equals 36.11 pounds.)

Year.	*Poods.*	*Year.*	*Poods.*
1885	2,198,809	1893	7,550,692
1890	8,197,490	1894	8,965,000
1891	4,554,300	1895	10,106,870
1892	7,876,473		

The following table shows the exports of Russian manganese ores to the principal consuming countries during the past two years, it being understood that shipments to Holland were in all probability intended for the blast furnaces in Rhenish Westphalia:

RUSSIAN EXPORTS OF MANGANESE ORE.

	Poods	
To	1895.	1894.
Great Britain	3,796,000	4,170,000
Germany	361,000	369,000
Holland	3,144,000	2,515,000
United States	2,676,000	1,780,000
Belgium	119,000	128,000

The London *Iron and Steel Trades Journal*, just at hand, was evidently not informed as to the American acquisition of the Russian manganese deposits, for it says: "It has long been proposed, and the question has lately been once more brought to the front, that smelting works should be established in connection with the mines in Caucasia, but there are many obstacles in the way, it being very difficult to procure supplies of coking coal. Works for the production of ferro-manganese have lately been established at Mariupol, and these have already been of service to the mine-owners in assisting them to maintain prices, in spite of the efforts of exporters to depress the market." It adds, that in order to bring about a further improvement in prices "it is proposed to form a syndicate of Caucasian manganese ore mine-owners, based somewhat on the lines of the Russian petroleum syndicate."

"BIG FOUR'S" YEAR.

President Ingalls, of the Cleveland, Cincinnati, Chicago & St. Louis road, or, as it is popularly known, the "Big Four," is always apt to say something interesting even when the opportunity for doing so is presented by the formal annual report of his company's operations. The statement of the road for the year ending June 30, 1896, which has just appeared, is in keeping with this expectation. The results of the property's operations may be considered later, and attention may in the first instance be directed to the remarks of the company's chief executive which accompany them, and which have reference to the general conditions affecting railroad properties in general during the period covered by the report. He says:

"The results for the year are not so encouraging as we had hoped for at the commencement. During the first six months of the year our earnings showed quite an increase, although the competition between railways was sharp and rates were low. During the last six months, when rates have been better maintained, our business decreased, simply from three causes: We had but very little wheat upon our lines, and this affected local earnings; the financial troubles of the country closed up, to a very great extent, the local manufactories upon our line, and this also largely decreased our local traffic, and from St. Louis eastward we have been subject to a very severe competition from railways not in the Joint Traffic Association, and our business upon that portion of the system has been seriously affected."

These reasons, particularly the last two, are indeed applicable to the results upon many roads besides the "Big Four," and it should also be observed that what Mr. Ingalls remarks about the division of the fiscal year that ended June 30 last into two distinct portions, in which the conditions and consequent results exhibited a good deal of divergence, can be applied to the analysis of the reports of railroads in a great many sections of the country for that period. The reasons which he gives for the falling off in traffic and revenue during the six months from January 1 to June 30 may not apply in every case, but examination will show that the causes have been parallel, and that the financial depression, with its closing of business establishments and curtailment of business activity, has had an enormous effect upon the country's railroad interests.

Referring to the company now under consideration the statement of revenue and expenditure for the year ending June 30 compares by items with the figures of the preceding year as follows:

	1895-96.	1894-95.	*Changes.*
Gross earnings	$13,704,534	$13,625,627	Inc. $79,507
Operating expenses	10,293,703	10,254,068	Inc. 39,635
Net earnings	$3,410,831	$3,370,959	Inc. $39,872
Fixed charges	2,844,509	2,844,705	Dec. 196
Surplus	$566,321	$526,253	Inc. $40,068
Other income	7,792	23,372	Dec. 15,580
Total income	574,114	549,626	Inc. 24,488
Dividends	500,000	500,000	
Surplus	$74,114	$49,626	Inc. $24,488

Under the conditions referred to in the comments of the company's president this exhibition is sufficiently favorable, and in another respect the company's report for the year is calculated to be encouraging to the owner of the property. One of the most important results of the hard times that the railroads of the country have encountered since 1893 has been to enforce much greater attention to the economization of these workings, in the sense that much closer results are expected from the operating department. The management of the "Big Four" cannot be said to have waited for this movement to become general. Ever since the consolidations that resulted in the creation of the present system its efforts have been directed to this end, and to placing the lines in such physical condition that it would be capable of doing an increased business at a minimum of expense. In the year just ended this principle has been applied with considerable success. The rate per ton per mile, fell slightly, owing to a larger increase in through business as contrasted with local freight traffic. In spite of this decrease in rates, the earnings per freight train increased from $1.45 per mile to $1.54 per mile, which is creditable to the company's transportation department. The report also calls attention to the fact that though in the passenger traffic of the company serious competition was encountered, the earnings per passenger train per mile were $1.01, as against 95c. per mile in the preceding year. Expenditures on capital account, all of which were for improvements calculated to add to the efficiency of the road, amounted during the year to $200,000, while a considerable amount of such expenses were charged in the operating cost and paid out of earnings. It will be observed that the operating expenses were at the comparatively high ratio to gross of 77 per cent., indicating that there was room in the total amount for no inconsiderable outlay under the head just noticed.

POSTAL SERVICE WORK.

The annual report of the Fourth Assistant Postmaster-General, which is the first of the bureau reports to appear, shows that there were 70,360 post offices in operation at the close of the fiscal year, there having been 1,750 post offices discontinued, and 2,046 established. Of the new offices established more than one-quarter were in the five southern states of Georgia, Mississippi, Texas, Arkansas and Kentucky. This

number is nearly three times as large as the sum of those established in the five northern states of Illinois, Indiana, New York, Ohio and Pennsylvania. The number of new offices in the state of Mississippi exceeds those established in the four states of Montana, North Dakota, South Dakota and Washington. This is attributed to the fact that many new business enterprises are springing up and a number of railroads are building in the first-named state. In the list of discontinued offices are included many established during the closing days of the last administration, where the business transacted did not warrant continuance. In other cases offices had been established within short distances of existing ones, but, instead of being a public benefit, it was found that they actually impaired good postal service. The number established, however, does not represent the demands for new offices which have been met the past year. In many instances by a judicious readjustment of post office-sites in conformity to the changing tide of population, the ends of a new office have been accomplished, thereby avoiding the objections often incident to new offices of increasing government expenditures and depleting the income of existing ones.

The department keeps up its record for diligence and efficiency. The total number of complaints received during the year relating to registered mail was 5,817. Only 24 complaints were received of carelessness in the handling of this matter by postal employees. Particularly noteworthy is the fact that the employees in the postal service handled the last fiscal year 13,851,000 pieces of registered mail, with the loss of only one piece in every 16,254. Of course by far the greatest amount of business of the post-office establishment is confined to the ordinary or unregistered mail from which source the bulk of the postal revenue is derived. As a matter of fact, nine-tenths of the duties performed by the employees of the more than 70,000 post offices pertains to matter transmitted through the ordinary mail, and the general business correspondence of the country is to a great extent transacted through this medium. Complaints to the number of 64,613 affecting the ordinary mail were received during the year, 31,843 referring to letters and 29,060 to packages. This shows an increase of 1,572 over last year. Of the total of complaints received 41,436 have been investigated, and of this number it is shown that no loss occurred in 8,153 cases, a proportion of one in five of the total number of complaints investigated. The report directs attention to the fact that owing to the difficulty of tracing letters and packages lost in the ordinary mail, some foreign departments have forbidden the transmittal of valuable articles through this medium, and whenever a violation of this regulation is detected registration is enforced, even though the letter or package may be already in transit. Although the registration of valuables is not insisted upon in the United States, it is declared to be most desirable that the general public should adopt that system, which would undoubtedly result in vastly diminishing the number of losses annually reported. It remains, of course, a matter of congratulation that the percentage of losses in the ordinary mail is so small when we consider the magnitude of the service, the enormous quantity of mail matter of this class handled, and the vast number of employees necessary to treat and care for the same.

The work of the post-office inspectors is commended by Mr. Maxwell, who says that the newly appointed postmaster would oftentimes be overpowered by the sense of his responsibility could he not look to the post-office inspectors for instructions, and many an official in the service would have trouble and vexation were it not for their advice and counsel given him at the outset of his career as a servant of the government. Under the present organization of the department the post-office inspectors have full authority to critically examine every branch and feature of the postal system. From this it will be readily inferred that the position of post-office inspector is one of dignity and respectability, and by the exercise of a high order of intelligence, discretion and efficiency the members of the force, as now constituted, have to a great degree disabused the public mind of the idea that a post-office inspector is a mere detective. An important branch of their duties relates to the robbery and burning of post offices, wrecks of postal cars, and highway robbery of mail messengers, mail stages and railway postal cars. On this branch of the work under his supervision Mr. Maxwell says that the depredations and casualties treated in this class of cases gradually increased until the last fiscal year, when a uniform decrease is shown under each subdivision, with the exception of mail pouches lost, cut or stolen. It was conjectured in the last annual report that the arrest or killing of a number of the most prominent outlaws in certain sections of the middle west, and the breaking up of several of the worst gangs of bandits that ever existed in this country, would result in a pronounced decrease in the number of train and stage robberies, as well as in post-office burglaries. The statistics set forth in the report prove the correctness of this forecast and justify the conviction that the growth of the country and the extension of the mail service does not involve the probability of an increase in the number of bold depredations by the most desperate criminals. A continued decrease in the number of post-office burglaries is also reported.

FOREIGN GOVERNMENTS IN DEFAULT.

One of the institutions of the London financial market, which has no parallel on this side of the Atlantic, is the Corporation of Foreign Bondholders. The principal object of this organization is to look after the interests of British investors in the governmental securities of countries which have defaulted in the payment of interest upon their external debts. It is not fairly realized here how large and varied are the government bond issues that have been placed on the London market and find a quotation there or how many of them have left their creditors in the lurch. The corporation to which reference is made above is administered by a council and devotes its energies to endeavoring to bring about a settlement in such cases, and has already played an important part in several instances of this kind. The annual report of the council of this body is, therefore, a record, or, as it is frankly called in London, a black list, of defaulting nationalities, in addition to furnishing an account of the steps taken by the council to bring about a settlement in cases where the offenders show a disposition to make amends or are anxious to mend their credit as a step toward contracting further foreign loans. The latter is, indeed, a powerful lever in favor of the European bondholder, and since the Corporation of Foreign Bondholders was established has been made more effective than ever, as the organization places the facts before the British and continental financial markets in such form and renders them so accessible that there can be no mistake about them.

The report of this useful institution for the current year appeared in London some little time ago, and is referred to at length in the newspapers there. It presents some interesting details, which not only throw light upon the extent of the foreign government obligations that find a market in the world's financial center, but give more or less explicit information about the history of the various defaults on the part of such countries. It has been two years since a report of this kind was issued, and the so-called "black list," or record of loans in default, shows in that period a very considerable increase, the aggregate amounts in default (approximately) being on July 1 last as follows, compared with the record in 1894:

	1803-94.	1895-96.	*Increase,*
Capital	£49,763,864	£51,506,452	£3,742,558
Arrears of interest	24,110,242	30,932,962	6,822,720
Total	£73,874,136	£84,439,414	£10,565,278

The increase is, however, mainly due to the practical bankruptcy of several South American countries. Some £3,400,000 of the increase is chargeable to the account of the Argentine province or state of Entre Rios, and some £500,000 more is debited to the City of Parana, there is also a net increase of some £900,000 on account of arrears of interest upon other Argentine provincial obligations now for the first time taken into the reckoning of the council. The republic of Ecuador suspended the service upon £693,000 of its external debt in February last, and Costa Rica figures in the list for £2,230,000, which includes both capital and four overdue coupons. These amounts, with the continued default in interest upon the old defaulted obligations, make up the £10,500,000 increase in the tribute, which the London market has paid to its belief in the ability or willingness of its foreign governmental debtors to meet their engagements. With respect to both Costa Rica and Ecuador the council, it seems, has a prospect of effecting an arrangement.

Some of the most interesting portions of the report deal, however, with the record of countries which, after a default, or, in some cases, a succession of them, have arranged with their foreign creditors upon a basis rather suggestive of the process of scaling down fixed charges so familiar on this side of the Atlantic in connection with the reorganization of bankrupt railroad corporations. In this connection, as in most of the defaults, the chief cause for astonishment is not that the countries which were defaulted have done so, but rather that investors in London or anywhere else should have ever lent them money to such an extent. Portugal is an instance of this. The national debt of the country in question is given as in excess of £131,500,000 and though the government seems anxious to conciliate its creditors the latter are receiving only 33⅓ per cent. of their rightful claims, while the efforts of the Corporation of Foreign Bondholders to secure more favorable terms have thus far been futile. Greece, which has exhausted its credit, has all along paid its interest with borrowed money, and since 1893 has been paying about 30 per cent. of the original rate on its external debt. Two countries, which are now very much in evidence, Spain and Turkey, are also worthy of attention in this connection. The former effected a conversion scheme in 1882 by which the capital of the debt was reduced by 55 per cent., and the rate cut down from 4 per cent. to 3 per cent. During the fourteen years that have elapsed the service on the external debt has been met, but the enormous floating debt since incurred, and the requirements of the Cuban war, with the insufficiency of the budgets of the past, point to an approaching breakdown. Turkey's last settlement with its creditors dates back fifteen years and has been adhered to thus far, but the hypothecation of various parts of the revenue pinches her resources at a time when the internal and external troubles of the country seem about to culminate.

THE COTTON TRADE IN ENGLAND.

Manchester, England, Sept. 12: The published totals of British shipments of cotton goods during August were larger than in the corresponding months of last year and 1894. The figures for the past eight months are also larger than in the corresponding period of 1895 and also of 1894. The usual table is as follows:

	Exports, August, yards.	*Exports, 8 months ended August 31, yards.*
1896	482,138,000	3,525,024,000
1895	432,087,000	3,347,038,000
1894	427,328,000	3,519,555,000

Comparing shipments so far this year with the like months of 1895 we find exports to the following countries were larger this year than last:

	Yards.
Germany	16,600,000
Holland	2,800,000
Belgium	4,100,000
France	2,000,000
Greece	1,400,000
Phillipine Islands	2,900,000
China (including Hong-Kong)	54,000,000
Japan	19,400,000
Colombia	1,600,000
Peru	9,800,000
Uruguay	5,000,000
Argentine Republic	12,600,000
West coast of Africa (British)	5,700,000
British possessions, South Africa	7,500,000
Bombay	106,400,000
Bengal and Burmah	167,000,000
Australasia	8,600,000

The countries which each show a decrease are:

	Yards.
Portugal	1,100,000
Italy	14,100,000
Turkey	55,800,000
Egypt	21,000,000
Morocco	12,000,000
West coast of Africa (foreign)	5,000,000
Persia	11,700,000
Dutch possessions in India	10,800,000
United States	7,700,000
Foreign West Indies	3,600,000
Central America	14,800,000
Chili	29,000,000
Brazil	8,200,000
Madras	55,000,000
Straits Settlement	12,000,000
Ceylon	6,000,000

One of the features in the tables is the lessened takings of Turkey this year, but it is pointed out that the shipments to that country last month were considerably larger than in the same month of 1895 and 1894. Egypt also is doing badly this year, as will be seen from the table, and it may be noted that 1894's total was larger than that of 1895. It is difficult to explain the lessened exports to Madras, when one finds Bombay and Bengal and Burmah taking so much more than last year. Altogether, however, India is doing much better than last year, although so far exports of piece goods thence are considerably below the corresponding months of 1894, affected by the fear of the cotton duties.

During the month under review scarcely any new business of magnitude has been done in Manchester in the way of orders to manufacturers for early delivery. This has arisen chiefly from the upset which has occurred in the raw-cotton market in the United States and in Liverpool. Makers' order lists are lighter than for some time. Manufacturers are, in point of fact, getting to the end of their contracts, and the ten-

dency is for looms to be empty of beams. In Nelson and Colne and Blackburn and Burnley, the outlook is anything but encouraging, and it may safely be said that if the present irregular state of the raw material market continues, short time, or at least lessened production, will be forced upon a large number of weaving firms.

Total British exports of cotton yarns for August show little change as compared with the same month last year. The totals (in pounds) for the last three years are as follows:

	Exports. August.	*Exports 8 mos. ended August 31.*
1896	20,242,000	165,642,000
1895	21,182,000	170,224,000
1894	19,437,000	153,822,700

Decreases in this line are found among the following:

Russia	220,000
Sweden and Norway	880,000
Germany	2,400,000
Holland	1,100,000
Italy	830,000
Austria	3,500,000
Turkey	2,600,000
China	2,000,000
Straits	800,000

The instances of increases of exports of cotton yarns are:

Belgium	500,000
France	1,700,000
Roumania	1,100,000
Japan	4,200,000
Bombay	2,500,000
Madras	2,700,000
Bengal	1,100,000

Yarn for export, like cloth, has been greatly disturbed by the manipulation of cotton prices and few orders have been placed during the last six weeks. Spinners for export, therefore, want new contracts. It is a long time since producers of bundles were so light under engagements. The home trade in cops, too, has been adversely affected. At the end of July spinners were not doing badly, that is to say, their production was being moved off and the margin was slightly wider than at the beginning of the year. The upward movement in American cotton, however, has upset everything. Spinners in South Lancashire have sold no weight of yarn recently, and the result is that to-day their margin is narrower and the position of affairs is generally unsatisfactory. There is one feature, however, which may be called encouraging, and that is that the consumption of yarn if the looms be kept fully at work is thought to be overtaking the output of the spindles. Now that the annual holidays are over in the spinning districts we shall see during the next few weeks whether yarn is or is not in abundant supply.

During the last six weeks or so American cotton has advanced in price at Liverpool to the extent of 1d. per pound. Just before the August bank holiday the official quotation for middling in Liverpool was 3 7/8d., but immediately afterwards a strong speculative movement set in from the States. Reports of bad weather were circulated and prices were affected. All through August the manipulators were busily at work, with the result that prices stand at about 4 13/16d., showing a rise of 15/16d. In the meantime, spinners have not been convinced that any very serious damage has been done to the growing American crop. They have, therefore, for the most part kept out of the market and have purchased supplies from hand to mouth. At present mill reserves are of comparatively small dimensions. It is also noteworthy that the stock of cotton in Liverpool is now little more than 400,000 bales, while, at the same time, last year it was more than 1,000,000 bales. The growing American cotton crop is undoubtedly early, whatever may be its size. Receipts are coming forward freely at the United States ports, and there is more cotton at sea for Great Britain than at the same time last year. It remains to be seen whether spinners will continue to buy from hand to mouth until we have larger supplies in Manchester and Liverpool.

A matter of interest to the cotton trade is the reduction of 1s. in the dock dues at Liverpool on imported cotton. This has undoubtedly been brought about by the competition of Manchester, but Manchester points out that this reduction is unimportant compared with the saving that Manchester spinners will get by importing direct by the ship canal.

THE WHITE PINE LUMBER INDUSTRY.

The lumber trade, in common with all other branches of business, has suffered from the widespread depression of the past year. It is true that the outlook at the beginning of the season was far from promising, but the measures agreed upon for alleviating the conditions then presenting themselves were by the majority of the trade thought to be sufficient to cope with the situation. That these measures, although fully carried out, have not been efficacious is additional testimony, if such were needed, to the intensity of the depressing features from which the trade has suffered. The figures of supply and demand presented at the beginning of the white pine season showed that about 25 per cent. of the cut of the mills in the northwest was left over and above the usual stock. This had been the result of accumulations of the past four years, but was particularly due to the depression in 1895. This surplus was largely in the lake markets, and at points where the competition of Canadian pine was most severely felt. The report of the directors of the Mississippi Valley Lumbermen's Association shows that the 25 per cent. suspension of production agreed upon at the opening of the present sawing season, has been faithfully carried out, and that the reduction, as a whole, has been really greater than that agreed, without, however, having the intended effect. The causes for this depression are in the main those affecting business in other lines, namely, uncertainty as to the currency outlook, with its paralyzing effect upon general business. Coupled with and complicating still further this situation, however, has been the question of Canadian competition. The address of the directors above mentioned recites that "official reports show that imports of Canadian logs and lumber for the year ending July 1 were about 1,000,000,000 feet. This amount was an increase of fully 500,000,000 feet over the imports during the preceding year, before the present tariff law had gone into effect and the duty on Canadian lumber had been removed, or an amount very nearly approximating the surplus in our yards and on our docks, which threatened and has now imposed upon us the necessity for closing our mills and depriving American laborers of the steady employment which it has been within our power to give them almost without interruption during a long term of years."

The primary cause of the prevailing depression is alleged to be the change in the tariff on lumber, and the unsettling of the currency situation, it is claimed, is only an aggravation of this. In closing their address the directors of the association say: "We therefore believe, without regard to party, that all honorable means should be adopted to impress the fact that the questions now before the American people are not questions of party, but of business, and that the future welfare of the nation, the prosperity of the country and the resumption of the work in all manufacturing institutions, and particularly the mills of the makers of white pine lumber, is dependent upon the indorsement of a protective policy, and especially of the gold standard—the standard of all the great commercial nations of the world. We therefore suggest that the assurance be given our employees that we have accepted the conditions which have been forced upon us, even more unwillingly than will our men now leave the positions which they have been filling, and which under normal conditions would have been opened to them until late in the fall, and that but for these conditions there would have been insured to that large class of our employees who find steady and remunerative employment during every winter in the woods the full quota of work. It must now be evident to them that it is impossible for us to give them the employment which is usually theirs. In our opinion it will not be possible so long as the financial institutions are menaced by an unstable money and our markets are invaded by the products of other countries because of an insufficient protective tariff—a tariff which neither protects the American laborer nor produces a revenue sufficient to pay the running expenses of the general government."

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

In a case instituted by the Commercial Club of Omaha against the Chicago, Rock Island & Pacific Railway Company and other railroads before the Interstate Commerce Commission, that body decided that carriers have no right to disregard distance and natural advantages for the purpose of bringing about commercial equality, and that the practice, if lawful, of giving to Kansas City, on shipments from the west through Pueblo, Colorado Springs, Denver and Cheyenne, and from the northwest through Cheyenne, rates not higher than on such shipments to Omaha, furnishes no warrant for giving Omaha rates from Texas points not higher than those to Kansas City—the circumstances and conditions in the two cases being substantially dissimilar. The commision said that through rates are matters of contract between carriers composing through lines, and the commission has no power to compel connecting carriers to contract with each other, and it held that if in cases of shipments under a through bill of lading and a through rate, the privilege of "stoppage in transit" at an intermediate point and trying the market there, and, if it be found unsatisfactory, of reshipping on to the point of original destination at the balance of the through rate, be lawful, the granting it to one locality and denying it to another, under substantially similar circumstances, would amount to an unjust discrimination against the latter, and that the maxima class rates between Omaha and Texas points should not be as high as those between Chicago and Texas points.

The new and stringent bourse laws in Germany in restraint of time or future contracts, of which mention has been made in these columns, have created a good deal of dissatisfaction. The Berlin correspondent of the London *Economist* writes that the sugar makers are complaining, and that business at Magdeburg, the principal sugar market, "appears to be partly checked." A meeting of makers of raw sugar had been held, and the conclusion reached that it was necessary to create a sugar syndicate in order to maintain prices. In the debates it was argued that the new sugar and bourse legislation interfered with business, in that limitation of time operations withdrew much capital which formerly had helped to regulate prices. In regard to overproduction of sugar the meeting produced a great many conflicting opinions.

CURRENT BUSINESS NEWS.

Industrial.

The pig-iron industry, says the *Iron Age*, "is adjusting itself to the late change in conditions, and since May 1 there has been a decline in production from 189,400 tons per week to 130,500 tons on September 1. On January 1, 1896, 241 furnaces were making 207,481 gross tons per week; and on November 1, 1895, the maximum was reached with 217,306 tons per week. On September 1, 1896, only 145 furnaces were in blast."

An exchange states that the check in bicycle manufacture "caused by overstocks and numerous failures, has diminished the demand for new rubber for tires. This is reflected by a lower price for crude material, quotations for fine Para being 80c. to 81c. per pound."

The McBeth lamp chimney factory, which has been running at two-thirds capacity, was to start up in full this week, and furnish work for 300 more hands. "There is no change in the situation at the window-glass and bottle factories, and the date of resumption is very indefinite."

Orders were issued September 22 to overseers in all departments of the Pepperell and Laconia Mills, Biddeford, Me., for starting the mills next Monday on full time. Some departments have been shut down since May and others have been running half time.

The Chattanooga *Tradesman* says: "The manufacturers of iron and steel are more confident as to the situation. The tone of the market is very much better, although there is no marked increase as yet in the volume of trade. Some few large contracts have been made, and prices are somewhat firmer. In structural material, business is better and transactions for buildings and bridges are more numerous. The demand for pig iron is increasing, and several good-sized orders are reported. In the Alabama iron districts trade is broadening. The Tennessee Coal, Iron & Railway Company have booked another order of 3,000 tons of iron for England. The foreign sales of Alabama iron to date aggregate about 25,000 tons."

The Lippitt Woolen Company, of Woonsocket, R. I., has reduced the wages of its employees 5 per cent., making an exception of those receiving $1 or less. The mill is just starting its light weight season, and will be in full operation in about a fortnight.

The Perkins Horseshoe Works, at Valley Falls, R. I., has started up, after having been shut down more than two months.

A table compiled by Henry R. Merton & Co., London, showing the principal copper supplies of the world in long tons from 1882 to 1895, contains the following:

	1895.	1894.	1890.	1886.	1882.
World	334,105	324,505	269,455	217,086	181,622
United States	172,300	159,695	116,325	69,805	40,470
Spain	54,950	53,995	51,700	49,653	39,560
Chili	22,075	21,340	26,120	35,025	42,909
Av. price, Chili, bars.	£42 17s 6d	£40 2s 6d	£54 1s	£40 6s	£67 6d

"With the exception of the years 1893 and 1886 the gain has been steady, and in both these cases the falling off was caused by the decreased American production."

The factory of the American Sewing Machine Company, Philadelphia, will start on full time September 28.

The Southwest Connellsville Coke Company will fire up four plants (1,100 ovens), giving work to over 1,000 men.

The Keystone Furnace at Easton, Pa., was put in blast September 23.

The Clinton Rolling Mill, the rod mill of the Pittsburgh Wire Works, and Factory K of the United States Glass Company (all at Pittsburgh) have resumed operations, employing over 1,000 men.

The Westinghouse Air Brake Company has received an order from the Pennsylvania Railroad Company for 30,000 sets of brakes. This will give employment to 1,500 men until March.

Mills Nos. 1, 2 and 4 of the Boston Manufacturing Co., at Waltham, Mass., which have been shut down for a month, will be reopened on Monday. The mills employ about 3,000 men.

Commercial.

The Hamburg-American Steamship Company is reported to be about "to raise its capital in order to increase the number of steamers, particularly freight steamers."

The Philadelphia *Record* says "the present bids fair to be the banner year for petroleum exports from the port of Philadelphia, about forty vessels now here being engaged in loading or preparing to load. This unusual activity is attributed to the fact that Russia's facilities for transporting oil to Batoum, her chief exporting point, have been temporarily crippled by the destruction of bridges; but there is no reason why the large market thus got by good fortune should not be held by good management."

The onion crop of 1896, now generally harvested, is smaller than a year ago, and should not prove burdensome, although prices in most instances are low. An investigation by *American Agriculturist*, covering every section of the country where onions are commercially grown, shows a shortage both in acreage harvested and yield. This report places the commercial crop of 1896 at 2,200,000 bushels, or nearly 25 per cent. smaller than a year ago, and 1,000,000 bushels, or a third, smaller than the bumper crop of 1891.

The representatives of the New Jersey boards of trade met September 21 in the rooms of the Trenton Board of Trade to discuss the inequality of the present system of taxation, and to devise, if possible, suitable remedies to be secured through the enactment of legislation at its coming session.

A firm of Detroit seed dealers are reported in a Washington dispatch "to have applied to the district courts for an injunction to restrain the Secretary of Agriculture and his assistants, and any other person connected with the free distribution of seeds by the government, from executing the law of Congress directing free seed distribution." The bill declares that the business of the concern referred to "will be damaged $20,000 by the execution of the act of Congress and the sale of 5,000,000 packages of seed taken from the firm."

The Philadelphia *Ledger* says: "The last of a fleet of fourteen vessels that have been lying idle for months in the bay of San Francisco has been chartered to load wheat for England. The grain will go all the way around Cape Horn, traversing the greater part of both the Pacific and Atlantic oceans, and on its arrival in England will compete with wheat from South America and India, as well as from the Mediterranean countries. The fact that it can go so far and yet enter a competitive market speaks highly for California as a wheat producing state, and should be encouraging to those farmers on the Atlantic slope who are despondent about their markets."

A London newspaper prints the following warning: "English cycle companies would do well to give some attention to a form of American competition which is said to be making considerable headway in Germany, where cheap machines are naturally in greater demand than those of high-class workmanship and material."

Financial.

The following securities were sold at auction this week at New York:

20 Shares Nassau Trust Company of Brooklyn, $100 each	127¾
50 Shares Phenix Insurance Company of Brooklyn, $50 each	132
25 Shares Third Avenue Railroad Company, ex-rights, $100 each	151
12 Shares Cincinnati, Hamilton & Dayton Railway Company, common, $100 each	28
35 Shares James Curran Manufacturing Company (hypothecated), $100 each	82
32 Shares Atlanta & Charlotte Air Line Railway, $100 each	95
9 Notes Tennessee Central Railroad Company, dated Chicago, December 1, 1894, payable to their own order and indorsed by them one year after date, interest at 6 per cent, $5,000 each; 2 notes do., $2,500 each; $150,000 Tennessee Central Railroad Company first mortgage 5 per cent. gold bonds, represented by order on depository for delivery, duly indorsed, $650.	

The Continental Trust Company of New York City has declared its usual quarterly dividend of 1½ per cent., payable October 10.

A regular quarterly dividend of 3 per cent. has been declared on the stock of the American Bell Telephone Company, payable October 15, to stockholders of record of September 30.

The Norfolk & Southern Railroad Company has declared a quarterly dividend of 1 per cent., payable October 10.

The New York Central & Hudson River Railroad Company has declared its usual quarterly dividend of 1 per cent., payable October 15.

The Keokuk & Western Railroad Company has declared a semi-annual dividend of 1 per cent., payable October 1.

A semi-annual dividend of 3½ per cent. has been declared on the stock of the Utica & Black River Railroad Company, which will be paid by the New York Central & Hudson River Railroad Company on and after September 30.

Railroads.

The total shipments of dead freight out of Chicago last week, east-bound, were 63,387 tons, compared with 61,846 tons the previous week, and 60,997 tons last year. The Pittsburgh & Fort Wayne carried 8,350 tons, the Lake Shore 8,230 tons, Michigan Central 7,338 tons, Pan Handle 7,010 tons, Grand Trunk 6,382 tons, Nickel Plate 6,643 tons, Baltimore & Ohio 5,557 tons, Wabash 5,112 tons, Erie 5,766 tons, and Big Four 2,994 tons.

It is announced that the Ohio Southern road will be sold November 7. Mr. J. T. Adams has been appointed special master.

Railway passenger agents have been considering a plan to prevent forgeries of railroad tickets, "which, it is estimated, has cost railroads $1,000,000 since January 1. The plan is to adopt a distinctive paper."

Appended is a detailed statement of the earnings and expenses of the New York Central & Hudson River Railroad Company and its leased lines for the quarter ending September 30, 1896, with comparative figures for 1895:

Quarter ending September 30.	1895. *Actual.*	1896. *Estimated.*
Gross earnings	$11,600,505	$11,276,400
Operating expenses	7,745,524	7,599,500
Net earnings	$3,854,981	$3,676,900
First charges	2,630,549	2,627,900
Profit	$1,224,431	$1,049,000
Dividend	1,000,000	1,000,000
Surplus	$224,431	$49,000

The following is a statement of the earnings, expenses and net earnings of the Allegheny Valley Railway Company for the month of August and the eight months ending August 31, 1896, compared with the same period of 1895:

AUGUST.	1896.	1895.
Gross earnings	$212,830	$238,884
Operating expenses	127,785	141,930
Net earnings	$85,044	$96,954
EIGHT MONTHS ENDING AUGUST 31.		
Gross earnings	$1,568,733	$1,632,506
Operating expenses	1,012,418	980,984
Net earnings	$556,314	$651,582

Miscellaneous.

Mr. John Gault, who for eight years has been assistant manager of the Merchants' Bank of Canada, at Montreal, and who for twenty-five years has been in the service of that bank, is now one of the agents of the New York branch of the Merchants' Bank of Canada, succeeding Mr. Henry Hague, who has retired. Mr. Gault's many metropolitan friends welcome him to New York commercial and financial circles.

The New York correspondent of the Philadelphia *Ledger* says there are 500,000 commercial travelers in the United States and that "they want to raise $150,000 to complete the home at Binghamton for the indigent members of their trade. To raise this money a big fair is to be held in Madison Square Garden, New York, in December."

A London dispatch, September 22, says: "Queen Victoria's reign becoming to-morrow the longest of all British sovereigns, all the morning papers will publish historic reviews of the events of the Victorian era, and editorials congratulating Her Majesty. The papers will dilate upon the progress that has been made in political economy and in all the arts, sciences and industries since the Queen ascended the throne on June 20, 1837."

The seventy-second session of the American Institute of Mining Engineers began this week in Denver, Col.

Foreign.

The London *Journal of the Society of Arts* says: "The production of German amber in 1894 amounted to about 4,400 centners (220 tons), or about 1,000 centners (50 tons) more than in the previous year. By far the larger portion of the above quantity is put out by the two mines of Palmnicken and Kraxtepellen, belonging to the firm of Stantien & Becker, while the smaller portion of about 120 centners (6 tons) only is obtained by dredging and searching the foreshore of the Baltic sea. The two mines named above, with the home industry, employ about 1,200 persons."

Canada produced, in 1895, 3,512,504 net tons of coal, not quite three-fifths as much as the output of Alabama. The United States sold to Canada more than double the amount of coal her mines produced.

The State Department will shortly publish a volume of consular reports, the leading features being a description of two years' exploration of the Congo Free State, in which Commercial Agent Mohun "traveled more extensively than Stanley," and a sixty-page account of Hangchow, the new Chinese treaty port opened to commerce by the treaty of peace with Japan, and, according to Consul Fowler, the richest city in China, and the center of the most extensive silk and tea districts in the world. The opening of this district, in the opinion of the American consul, presents the greatest opportunity to the merchants of the United States ever offered in the China trade.

Trade with Costa Rica is to be fostered by the establishment of a consulate in Philadelphia, and the consul for Costa Rica states that he "will be glad to receive two sets of catalogues from manufacturers, together with particulars of terms of credit and discount, freight, etc. He will also be pleased to answer inquiries as to the character of goods desired."

The Central Canada Exhibition was formally opened at Ottawa, September 21, by Premier Laurier.

The rye crop of the world, according to the recent estimate of the Hungarian Minister of Agriculture, is only 1,210,000,000 bushels this season, compared with 1,360,000,000 last year and 1,600,000,000 in 1894.

The British consul-general at San Francisco and the vice-consul at Los Angeles in their latest reports "warn capitalists, farm pupils, and intending emigrants generally, in regard to California." The consul-general refers to the repeated warnings of his predecessors to British subjects "not to invest in land in the state until they have been there sufficiently long to enable them to acquire some knowledge of the conditions of the country and to form an opinion as to the prospects of success."

The economic section of the British Association discussed the currency question at Liverpool September 22. In the course of the discussion Mr. William Fowler declared that low prices were the cause of the contest between gold and silver, adding that prices affected money, but that money did not affect prices. Bimetallism, he said, was trying to fix price by law, but it was trying to accomplish an impossibility.

A St. John's, Newfoundland, dispatch, September 21, says: "Clergymen, school teachers and other reputable residents of Labrador and northern Newfoundland are writing to the newspapers and the government respecting the destitution prevailing on those coasts owing to the failure of the fisheries. The writers unite in declaring that hundreds of persons must perish from starvation unless extensive relief measures are inaugurated soon. They urge the government to grapple with the situation promptly, and they also solicit the assistance of the British Cabinet, through whose restrictive laws in favor of French fishermen and against the residents most of the destitution is due."

During the last twenty-five years the per capita consumption of rye in Germany is reported to have "fallen from 266¾ pounds to 248 1/5 pounds, and the consumption of wheat has increased from 133¾ pounds to 159¾ pounds."

The fact that the British Association for the Advancement of Science will hold its summer meeting for 1897 in Toronto has called out from Canada a proposal that a joint meeting or meetings be held in the Dominion, "in which the American Institute of Mining Engineers, the British Iron and Steel Institute, the different associations of mining engineers in Canada and the Federated Institution of Mining Engineers of Great Britain are to be asked to join."

The *Railroad Gazette* says: "A little over two years ago Glasgow, Scotland, took possession of all the transit lines within its limits, and the details of operating them, according to the latest published reports, are as follows:

	1894-95.	1895-96.
Miles in operation	31	32
Cars	305	337
Car mileage	5,169,109	6,831,379
Passengers carried	56,907,519	85,951,230
Receipts	$1,109,400	$1,633,755
Average per car mile	20½c.	23c.
Operating expenses	$1,011,045	$1,255,550
Average per car per mile	18½c.	17c.

The Glasgow fares are arranged on a different scale from those in American cities. Instead of charging one fare for a single ride, long or short, the fares are divided into stages according to the distance, and vary from 1c. to 3c. The average fare is only .9d., as compared with 2.4d. in Manchester, 1.9d. in Liverpool and 1.34d. in Birmingham."

Consul Patterson reports to the Department of State from Demerara, British Guiana, that there will be an increase in the sugar-cane crop of that colony of from 10 to 20 per cent. over last year's crop, which amounts to 100,000 tons.

The New York *Tribune* says of grain ocean freights: "Some time ago freights ruled at about 5c. or less a bushel to the English ports. Now they are as high as 9c. and 9½c. to Liverpool, London, Glasgow and Leith. There is a good demand for grain steamers here, 4s., British, a quarter being offered to Cork for orders. Should these rates hold, there should be a rush of vessels to this port. It is said that recently cargo space for 5,000,000 bushels of grain has been engaged for this port."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Duty on Fish Packed in Ice.

The United States Circuit Court of Appeals at Boston sustained, in the case of De Long et al. vs. The United States, the decision of the Circuit Court that an importation of mackerel packed in ice, made by the appellants in October, 1894, from Halifax, was subject to a duty of one-half of 1 per cent. a pound, under paragraph 210 of the tariff act of August, 1894, under the classification "salt-water fish frozen or packed in ice," and that the mackerel were not duty free, under paragraph 481 of the same act, as fish frozen or packed in ice, fresh.

Corporation—Mortgage—Homestead.

The Kentucky Court of Appeals held, in the recent case of Cohen's Administrator vs. Ripy et al., that where the president of a corporation became the sole stockholder by the purchase of the shares of other stockholders, executing a mortgage upon the real estate of the corporation to secure the purchase price of the shares thus purchased, his widow and infant children were not entitled upon his death to dower and homestead in the mortgaged property as against the mortgage debt, for, while it may have been the intention of the parties that the corporation should be dissolved, yet as a contract by which the president became the sole stockholder embraced the execution of the mortgage, no right of homestead or dower could exist as against that mortgage.

Note—Mortgage—Assessment.

The Supreme Court of Michigan held, in the recent case of Carmody vs. Crane et al., reported in the Detroit *Legal News*, that a stipulation in a note executed with a mortgage to pay taxes assessed upon the mortgagee's interest which is not limited to such assessments as might in future be made under existing laws, but covers as well assessments which might thereafter be authorized by legislation, will render the instrument non-negotiable. The court further held that where one executed a mortgage to a party individually with the understanding that the mortgagee should pay and discharge outstanding indebtedness against the property, the mortgage being left in his hands until the indebtedness was discharged, such mortgagee cannot be said to be an agent of the mortgagor, and that one purchasing such mortgage from the mortgagee would take no greater equities by his purchase than the mortgagee had.

Demurrage—Libel—Bond.

The case of Wellman et al. vs. Morse et al., recently decided by the United States Circuit Court of Appeals at Boston, arose upon a libel brought in the district court by the owners of a vessel, under a charter party, against the appellants, who were consignees of her cargo of lumber, to recover demurrage for the detention of her cargo aboard the schooner pending the improper refusal of her owners to sign a general average bond. The court considered the case in the light of the theory that the vessel's owners cannot charge demurrage by detaining the cargo aboard for nonpayment of the general average and of the almost universal practice for the master, before delivering the cargo to take an average bond, and for the owners of the goods to give such bond, and held that the owners of the vessel were not entitled to demurrage pending the detention of the vessel with the cargo aboard, and that the consignees were at fault in not promptly tendering a suitable general average agreement, free from all objectionable provisions; that the case would not have been before it had the parties reasonably proceeded in accordance with maritime law and usages, and that neither party was entitled in the matter to the favor of a court of admiralty.

Railway—Accident—Negligence.

The Supreme Court of Minnesota held, in the recent case of Wherry vs. Duluth, Mesaba & Northern Railroad Company, that the fact that a danger is known will preclude a recovery in case of injury where such danger is apparent and imminent and of such a character as to impose upon one who undertakes to pass it a hazard that an ordinarily prudent man would not incur, and that a person has no right to cast himself upon a known danger when the act subjects him to immediate and great peril. It appeared in this case that the plaintiff approached a street crossing and found it blocked by a freight train. It was apparent that the train was liable to start at any moment. After waiting at least twenty minutes plaintiff attempted to cross by climbing up between the cars some 200 feet from the engine, and was injured by the sudden backing up of the train, no signal or warning having been given. The court held under all of the facts of this case that the plaintiff was guilty of contributory negligence as a matter of law, which would prevent a recovery, and that the fact that other men have attempted or performed reckless and negligent acts of a certain character cannot be allowed to justify or excuse one who attempts or performs the same reckless and negligent act.

Married Women—Georgia Law.

The Supreme Court of Georgia held, in the recent case of Foulkrod et al. vs. Rodgers, that evidence that a husband managed and conducted for his wife and as her agent a mercantile business belonging exclusively to her, giving to it his entire time and attention, and that his services in so doing were worth a stated sum per month, would not, without more, be sufficient to show that there was any unpaid indebtedness by her to him for such services, nor would this be made to appear by introducing in evidence, in addition to the above, the books kept in the business showing its nature and extent and containing no entries of any payments to the husband. In the case of Williams vs. Webb et al., the court held that a married woman who was not living separate and apart from her husband was not, under the constitution of 1863, entitled to have a homestead set apart to herself out of her own property, and that, this being so, proceedings instituted in her behalf for setting apart such a homestead were, though carried to final approval by the ordinary, absolutely void, and constituted no obstacle to a sale, under an execution against her, of the property sought to be exempted. In still another case (Burney vs. Savannah Grocery Company), the court held that there was no law or public policy in the state forbidding a married woman from engaging in business with her husband as a copartner; that where a partnership between them was formed, and she was held out to the world as one of its members, she became liable to one who dealt with the firm upon the faith of her membership therein, and that secret stipulations in the partnership articles, limiting the wife's liability as a member of the partnership, were not binding upon innocent third persons who had no knowledge of the same.

Federal Jurisdiction—Bank Receiver.

The United States Circuit Court for the District of Nebraska held, in the recent case of Bartley vs. Hayden, reported in the Chicago *Legal News*, that a suit, brought against the receiver of an insolvent national bank, as such, to establish a claim of the plaintiff as a depositor in the bank, was a case arising under the laws of the United States, of which the United States Circuit Court had jurisdiction, irrespective of the citizenship of the parties. The court in giving judgment said: "As it is not averred that the plaintiff and defendant are citizens of different states, the jurisdiction of this court depends upon the question whether the action is one arising under the Constitution or laws of the United States, within the meaning of the first clause of the act of Congress of 1887, as amended by the act of 1888, which declares that the circuit courts of the United States shall have jurisdiction concurrent with the courts of the state in all cases at law or in equity wherein the matter in dispute exceeds in value the sum of $2,000, exclusive of interest and costs, and arising under the Constitution or laws of the United States. The defendant in the case is a receiver of a national bank, duly appointed by the Comptroller of the Currency. He is made the defendant in the suit because he is the receiver of the Capital National Bank, and any and all relief which the court can grant in the case is based upon the fact that he is such receiver, holding his position by virtue of the provisions of the laws of the United States, and, under the provisions thereof, it is claimed by the plaintiff that he owes certain duties to the plaintiff as a creditor of the insolvent bank. It is certainly clear from the allegations of the petition that the plaintiff bases his claim to relief against the defendant upon the fact that the defendant is the receiver of the Capital National Bank, and upon the duties and obligations which it is assumed are created by the position occupied by the defendant. The plaintiff could not proceed one step in the case, nor ask any relief whatever, unless it is made to appear that the defendant is in fact the receiver of the Capital National Bank duly appointed to that position under the provisions of the laws of the United States. The theory of the plaintiff's case is that it is the duty of the defendant, as receiver of the insolvent bank, to allow the claim of plaintiff as one of the debts provable in the matter of the insolvent bank. What the duty of the defendant is, as the receiver, is a question which depends upon the laws of the United States, which create the position and define the duties thereof."

BUSINESS NOTES.

Farm Animals of the World.

The number of the farm animals in the world is estimated as follows in an Agricultural Department document:

	1893.	1896.
Horses	66,995,100	67,254,553
Mules and asses	8,683,152	8,865,573
Cattle	298,873,657	312,055,835
Sheep	534,848,924	511,390,569
Swine	102,172,224	103,969,220
Goats	36,025,433	31,992,385

Sheep Flocks of the World.

The number of sheep in the world in 1893 and in 1896 has been given as follows:

	1893.	1896.
North America	51,292,797	42,470,339
South America	96,242,137	89,360,010
Europe	191,688,503	184,750,947
Asia	35,378,066	38,636,232
Africa	35,589,208	34,694,957
Australasia	124,645,606	121,165,477
Oceanica	12,607	12,607
Totals	534,848,924	511,390,569
*United States	47,273,553	38,298,783

* Included in North America, but also placed separately for sake of comparison.

British Wheat Imports.

The London *Times* says: "The subjoined table, which gives the value of our imports of wheat from various countries for the eight months ended August 31, shows that the United States has profited appreciably by the partial failure of the supplies usually put on the market by its competitors:

	1896.	1895.	1894.
Russia	£3,412,000	£4,407,000	£2,871,000
United States	6,040,000	5,350,000	5,124,000
Argentina	1,331,000	2,735,000	2,334,000
India	512,000	1,539,000	966,000
Australasia	2,000	889,000	747,000
British North American	631,000	326,000	438,000
Other countries	1,288,000	827,000	612,000
Totals	£13,214,000	£16,073,000	£13,092,000

The Population of France.

The London *Journal of the Society of Arts* says: "The population of France now amounts to 38,228,969 persons, as compared with 38,095,150 at the last census (1891). This very slight increase is almost entirely due to the increase of the urban centers. Twenty-four departments show an increase and sixty-three departments a diminution of the population; but there are cases where there is a falling off, taking the department as a whole, while the numbers in certain towns or industrial centers in these departments have risen. In five years there has only been an increase in the population of France of 133,819 persons, and the increase, according to all appearances, is chiefly attributable to immigration."

Electricity and the Flight of Projectiles.

The effect of electricity on projectiles while in flight has been illustrated by some recent trials of the Swiss army rifle. The *Journal de Genève* states that during this trial strange deflections of the bullets were noticed that could not be accounted for until it was discovered that an electric line paralleled the range. Experiments were made by building a line of four steel cables the full length of the range, 780 feet, and about 120 feet from it. When these cables carried a heavy current of electricity the lateral deflection for this distance was about 70 feet. For a longer range the deflection was much increased; with artillery, and a range of 9,000 feet, the deflection from the true line is claimed to reach the enormous amount of 140. It is not stated whether the deviation is toward or away from the electrical cables.

Mobile's Trade for the Year.

The Chattanooga *Tradesman* says: "Every year adds to the commerce of the port of Mobile, but the year ending August 31 marks the best showing of any previous year in the history of that port. The value of exports, foreign, is $7,000,000 as against $5,175,000 last year. Corn exports, 1,535,000 bushels, against 103,000 bushels; general merchandise exports, $610,000, against $150,000; cotton exports, $4,185,000, against $3,400,000; lumber and timber exports, foreign, $1,480,000, against $1,220,000. Total exports to Europe, $5,380,000, as against $3,850,000; exports to Central America and South America, $1,610,000, against $1,260,000. Value of cotton receipts, $8,220,000, against $7,150,000. Lumber and timber shipped, in superficial feet, 162,403,000, against 128,619,000. The imports of fruits continue large."

The Cycle Industry.

A correspondent of the London *Times*, in an article on the cycle trade of that country, puts "the annual output now at about 750,000 cycles, valued at £11,000,000 or £12,000,000. The exports of cycles last year were of the value of £1,393,810, against £1,200,913 in the previous year, and the increase has been of larger volume this year. The limited liability companies engaged in this industry have a capital of over £17,000,000, to say nothing of the large investment of capital in private concerns. Last year 1,955 patents were applied for in connection with cycles and accessories. Pneumatic tires are being turned out at the rate of 1,500,000 a year. Few cycle manufacturers make their machines from beginning to end, and Birmingham largely supplies them with the component parts, of which there are nearly 1,000 in a complete machine.

The Manchester Ship Canal.

The *Engineering News* says: "The Manchester Ship Canal Company has sent its general manager, Mr. Marshall Stevens, to this country to induce the transportation companies here to make more use of the canal. Mr. Stevens has issued a circular letter setting forth the apparent advantage, at least, of shipping direct to Manchester instead of via Liverpool. He claims that with no reduction upon inland freight in America and with an even sea rate there will be an average saving on the whole New York cargo of 7c. per 100 pounds, or $1.56 per ton in favor of Manchester, and $1.17 per ton saving on the New Orleans cargo. He does not explain where this saving comes in, except to say that delivery by cart to destination is included in his figures, and that one week is allowed at the Manchester docks for the removal of freight from the quay sheds as compared with three days at Liverpool."

Competition in Wheat.

In a speech made recently by Senator Davis, of Minnesota, the Chicago *Tribune* says "he gave some facts which the wheat farmers of his and other states, who claim wheat has fallen in price because silver has fallen, should think over. Said he: 'The reason for the decline of wheat has been overproduction. In 1873 the United States had no exporting competitor. In 1873 Russia exported only about 20,000,000 bushels; in 1891 it exported 50,000,000 bushels; in 1894 its production was 297,700,000 bushels. In 1873 India exported only 294,000 cwt. In 1892, 30,000,000 cwt., or eighty times more than in 1873. In 1894 her production was 237,875,000 bushels. The world's production in 1894 was 2,363,350,000 bushels, of which the United States produced 453,750,000 bushels. So you see the enormous mass against which the Minnesota farmer has to contend. The fact is, my fellow-citizens, the best consumer and customer of the Minnesota farmer is the people of the United States.'"

Gulf Ports of the United States.

The British vice-consul at Kansas in a late report refers to the growing importance of the ports on the Gulf of Mexico as outlets for the produce of the western and southwestern states. "The grain trade especially is turning in this direction from Chicago and the eastern ports, owing to the low rates for transport by rail and on the Mississippi, and to the greater regularity and certainty of delivery in winter. Districts as far north as Minnesota now send produce abroad by New Orleans, Galveston, etc. 'British merchants,' says the vice-consul, 'should bear in mind that there is a good field here for their products. In the past they have dwelt too much upon selling only to the eastern cities upon this continent; they should pay attention to the western cities also, for they would find safe customers at a better profit.' He has no doubt that in future the bulk of the exports and imports of the territory west of the Mississippi will be dealt with in the Gulf ports—Nebraska, Missouri, Kansas, Iowa, Arkansas, Oklahoma, the Indian Territory, and even the St. Louis district."

The Condition of Manchuria.

The Chinese province, Manchuria, which came into prominence during the late Chinese-Japanese war, appears to be recovering rapidly from the effects of the recent war. The London *Times* says: "Mr. Hosie, consul at Niuchwang, reports that he had a recent opportunity of visiting Kirin, the central province of Manchuria, and nothing surprised him more than the magnificence of the agricultural area through which he passed in this journey of over 780 miles. The country resembled very much the plains of Canada, with here and there a touch of the rolling lands of the northeast of Scotland. There were no small cultivated patches, as in southern and central China; fields on a gigantic scale everywhere met the eye. Scarcely a piece of waste land was to be seen. He mentions the all but incredible volume of trade that was being carried on along the main roads, and the great impetus which the Japanese occupation of the Laotong peninsula gave to the development of the more northern districts of Manchuria. Russian exploring parties have been traversing the province, and an American and German firm have established agencies."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

In eastern jobbing circles the feeling is one of increased confidence. There is more doing in some staple lines, noticeably at the east and at a few southern cities. In most other instances purchases continue for immediate wants only. There is little expectation of a general revival in business prior to election. Throughout the central and northwest states no material change is reported in general trade features. Exceptions are at Cincinnati and St. Louis, where demand for staples is larger. Savannah and Augusta report a marked increase in volume of business, both wholesale and retail, with satisfactory collections. Memphis and Galveston report moderate gains in demand and sales. Improvement is shown in various commercial and industrial lines at New York, Boston, Providence and Pittsburgh.

Improved demand for wool continues, with an upward tendency in prices. Demand from England remains noticeable, but is offset by high rates of freight and scarcity of ocean room. There is a better jobbing movement in cotton goods, which are higher. Not much more woolen machinery has been started. Sales of woolens are generally of low-cost variety. The starting up of iron mills and furnaces is conspicuous, but makers in some instances seem to be anticipating demand. Stocks of pig iron have nearly doubled since January 1, while producing capacity has been restricted more than one-third. The better feeling in the iron and steel industry is not followed as yet by a corresponding demand. Exports of 50,000 tons of steel rails, 25,000 tons of pig iron, and smaller quantities of other forms of those metals this year have been possible only by reason of extreme depression of cost prices of raw materials at a time when foreign makers are endeavoring to obtain higher prices. Some textile manufacturers in Philadelphia have started up and some have shut down. Providence manufacturers of textiles and jewelry report a better demand, but makers of cotton yarns continue to curtail output. Easier rates for money at the east are followed by a disposition on the part of western banks to make loans, but at many points money markets are characterized by extreme stringency, notably at some southern cities. Collections generally are difficult to make, the only tendency to ease being at some primary markets for wheat and cotton.

If the domestic wheat crop be placed at 450,000,000 bushels this year, which is materially larger than government reports indicate, even the largest allowance for wheat carried over in the United States on July 1 last, is shown by BRADSTREET'S to permit only a slightly larger export surplus this cereal year than last. With short wheat crops in most of the important wheat exporting countries, this is of great significance. Should government indications of the size of the domestic wheat crop prove true, the indicated surplus for export this cereal year would not be much more than 90,000,000 bushels, and about 40 per cent. of that total has gone forward already.

The general tendency of prices of staples continues most of the advances of a week ago, notably those for cereals, wool, cotton, leather, while iron, steel, lumber and hides remain firm. The bank clearings' gauge of the volume of business brings an expected decrease as compared with last week, the falling off amounting to more than 5 per cent., the total for six days ending September 24 being $833,000,000. The decrease this week compared with the corresponding week in 1895 is 14 per cent., but as contrasted with the corresponding week in 1894, this week's gain is nearly 4 per cent. The gain as compared with the fourth week of September, in the panic year, 1893, is 11 per cent., but the decrease, when contrasted with the like week in 1892, is nearly 20 per cent.

The total number of business failures throughout the United States continues large, 321 this week, compared with 315 last week, 198 in the fourth week of September, 1895, 204 in the like week of 1894, and as contrasted with only 232 in the corresponding week of 1893, in which week there was a heavy falling off from the total the week before. In the like week of 1892, a year of comparative business prosperity, only 143 business failures were reported, compared with 321 this week.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 3,818,646 bushels (dispatch from Newport News not received), as compared with 3,566,000 bushels last week, 3,151,000 bushels in the week one year ago, 2,562,000 bushels two years ago, and as contrasted with 3,490,000 bushels in the corresponding week of 1893.

Easier conditions in the money market and the better political outlook have caused a bullish feeling and an advance in speculative stock values at New York. The improvement is mainly on professional buying and covering of shorts, but the market tends to widen, as shown by the activity and strength of low-priced stocks. Bear operators made unsuccessful efforts to sell the market down, in anticipation of the advance of the Bank of England rate, but produced no liquidation, as stocks seem to be in strong hands. The sale at foreclosure of the Reading property attracts attention to the reorganization of that property. The Bank of England rate was advanced on Thursday from 2½ to 3 per cent., and open market discount there is higher at 2¼ per cent., but American stock values suffered least of any. Exchange rates here are firmer at 4.84 for demand bills. Engagements of gold in Europe aggregating $5,500,000 for shipment here are announced, $2,000,000 being taken on Friday, and $6,055,000 gold have arrived, exclusive of $2,250,000 received at San Francisco from Australia.

Wholesale trade is reported fairly active at Toronto, and country merchants are paying bills more promptly. At Montreal the volume of general trade is small and there is less activity among manufacturing interests, owing to continued uncertainty as to Dominion tariff changes. Demand has not increased at Quebec city, and collections in the region tributary to it are slow. Shoe manufacturers, however, are reported busy. Only a slight gain in wholesale circles is reported from Halifax. The apple crop in Nova Scotia is the largest known. Owing to the failure of the Labrador fisheries, great destitution exists in northern Newfoundland. New Brunswick is making heavy shipments of lumber to British markets, but smaller ones to the United States. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $19,729,000 this week, a slightly smaller total than last week, and only slightly larger than in the corresponding week a year ago. Compared with 1894 this week's total is about $220,000 smaller. There are 34 business failures reported from the Dominion of Canada this week compared with 41 last week, 35 in the week a year ago, 31 two years ago, and as contrasted with 36 three years ago.

FINANCIAL.

The Money Market.

Out of town demands on New York for money are believed to be diminishing, while the forcing of crops to market tends to bring funds back to this center. The large gold arrivals from Europe have tended to relieve the strain, and the considerable amounts still en route have a beneficial sentimental effect. Increased confidence in the political outcome was also a factor and tended to relax the conservatism of lenders, less disinclination being shown to put out funds till after the election, trust companies and institutions being again in the New York loan market. As the result of these combined influences call money at this city has been again abundant, and bankers' balances on the Stock Exchange loaned from 3 to 5 per cent., the business at the end of the week being mainly at 4@5 per cent. The most important feature in the New York market was the reappearance of time money in some volume, loans on mixed collateral being made at 6 per cent., with a gold note, and 6 per cent. plus a commission, without the gold clause. Later in the week the gold provision was less firmly insisted on, and lenders showed more readiness to make arrangements running from three to four months. The demand, however, for such accommodation, extending till after the November election, was quite large. There was also a better movement in commercial paper. Out of town buyers have been reappearing, and some few local institutions show a disposition to buy. The supply of names is small, and the quoted rates for doubles are 7@8 per cent.

The New York Banks.

The increase in cash holdings shown by the averages for specie and legal tenders in last Saturday's bank statement were not as large as expected, the total gain in reserves being only $1,700,000. The item of loans decreased $809,000, and deposits increased $321,000, while there was another gain in circulation to the extent of a little over $500,000. The statement, however, was regarded as indicating that the movement of funds from New York to the interior was slacking to some extent. The effect of the other changes was to increase the surplus reserve by $1,686,550, and the figures of the week compare as follows with those of the preceding week's statement:

	Sept. 12, '96.	Sept. 19, '96.	Changes.	
Loans	$452,698,800	$451,889,300	Dec.	$809,500
Specie	51,961,800	53,435,300	Inc.	1,473,500
Legal tenders	68,219,600	68,513,100	Inc.	293,500
Deposits	445,654,300	445,976,100	Inc.	321,800
Circulation	18,711,700	19,221,100	Inc.	509,400
Total reserve	120,181,400	121,948,400	Inc.	1,767,000
Reserve required	111,413,575	111,494,025	Inc.	80,450
Surplus reserve	9,767,825	10,454,375	Inc.	1,686,550

At the corresponding period last year the surplus reserve was $22,443,500, against $59,974,675 in 1894.

The Boston Banks.

	Sept. 19, '96.	Sept. 12, '96.	Changes.

Surplus reserve	2,221,000	880,314	Inc. 1,340,686

Silver.

The London silver market has been irregular and featureless, with small fluctuations. New York mercantile quotations followed the foreign ones till the end of the week, when there was a sharp drop in London, the price of bars per ounce falling from 30 5/16d. to 30 3/10d. This was due to the rise in money rates there, which, of course, affects Oriental exchanges. The New York quotation, however, advanced ¼c., from 65½c. to 65¾c. per ounce. The transactions in bullion certificates on the Stock Exchange here were for 166,000 ounces at 66½ @66c.

N. Y.	65⅝c.	65½c.	65½c.	65½c.	65¾c.	65¾c.

Foreign Exchange.

Continued offerings of commercial bills on a large scale and an absence of mercantile inquiry for exchange were again the features of the market during the early part of the week. The easier tone of the money market has not apparently resulted in any increase in remittances, and the buying was, as before, confined mainly to gold importing firms. As the week advanced the market was, however, affected by the expected advance of the Bank of England rate. Quotations for bankers' demand sterling, which had fallen to 4.83½ on Tuesday, were firm on Wednesday at 4.83¾ @4.84, and on Thursday, when the bank raised its rate from 2½ to 3 per cent., and open market discounts in London rose from 1¾ per cent. to 2@2¼ per cent., the rate for sight sterling here became firm at 4.84. Long sterling was also firmer, though the tendency of the advance in money abroad would be to increase the difference between the two classes of exchange. At the same time the principal inquiry on which rates advanced came from gold importers, and, in view of the large arrivals of specie expected at the close of the week, it is thought that in some instances bankers have been short of exchange against the importing transactions. Attention is paid to the fact that sterling loans contracted during the early stages of the recent flurry in money mature soon, and this, with the relaxation of money rates, was considered likely to cause a hardening in exchange.

Gold engagements continued to be made in London in the early portion of the week, the amount taken, so far as known, being $5,500,000, of which $2,100,000 was taken on Friday. Posted rates were unchanged at 4.83@4.84½. It was also announced that $2,500,000 obtained in Australia would arrive at San Francisco presently. Last week's large engagements of gold for American account in Paris were not duplicated, the rate for money there tending to harden so that everything pointed to an advance in the Bank of England rate on Thursday. The advance by the bank from 2½ to 3 per cent. was, therefore, fully expected. The statement issued for the week showed a net loss of £990,000 in the bank's specie, £850,000 of which was bars and eagles sold presumedly for the United States. The institution's reserve also fell from 56.10 per cent. to 55.45 per cent. In the London open market, as referred to above, discount rose to 2@2¼ per cent., and call loans from ¾ to 1½ per cent. Banks and discount houses generally also raised the rate on balances to 1½ per cent., and the Paris money market, in anticipation of further demands in its gold, advanced the discount rate to 1¾ per cent. On Thursday, before the bank rate was marked up, £148,000 in eagles was taken for shipment here, and $2,100,000 on Friday.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.84¼; commercial bills, 4.80¼; francs, 5.21⅞@5.20; reichsmarks, 94 5/16@95.

The exports (exclusive of specie) from New York to foreign ports for the week ending September 22 were $1,743,558 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$7,544,921	$7,782,838
Previously reported	267,889,034	241,384,895
Since January 1	$275,433,955	$249,167,793

The following table shows the imports (exclusive of specie) at the port of New York for the week ending September 18, 1896:

	1896.	1895.
Dry goods	$1,740,723	$2,829,938
General merchandise	5,003,978	6,945,856
Totals for the week	$6,744,701	$9,775,794
Previously reported	329,733,743	370,304,574
Since January 1	$336,478,444	$380,080,368

THE STOCK MARKETS.

The New York Stock Market.

Speculation shows at present an evident tendency to discount the developments in the presidential canvass, which point to a sound-money victory. The effect of this is reinforced by the increased ease of the money market and the resumption of manufacturing activity in various directions. The advance of the Bank of England rate from 2½ to 3 per cent., the hardening of the open market for loans at London, and a slight rise in exchange rates here seems to impose a check upon the inflow of gold from Europe, but in view of the activity of grain and other exports, it is thought that the movement of specie this way will continue, though upon a more moderate scale. During the week, however, less than $5,500,000 gold was secured in London and Paris for shipment here, making the total to date about $40,000,000, of which $31,000,000 has already arrived. Deposits in the Treasury have raised the government's free gold to $119,700,000, and if amounts that have not yet gone through the assay office, and a sum of $2,500,000 that is expected at San Francisco from Australia, be included, the total Treasury holdings may be put at about $124,000,000, as against $101,000,000 when the gold inflow began. This is undoubtedly a factor in creating the better feeling, which affects the course of share-market values. Nevertheless, the market continues to be in the main a professional affair. Public participation cannot be detected, and the foreign markets, while more favorable toward American securities, are influenced by the pending troubles over Turkey and the rise in interest rates. This prevents buying by London, and under the circumstances the upward progress of prices here is naturally subject to interruptions on account of profit taking and short selling by professional operators. The latter were active in the market early in the week, when the unfavorable outlook of the Eastern situation depressed the London market, and again on Wednesday a considerable amount of shorts were put out, on the expectation that the advance in the Bank of England rate would result in foreign sales and at least a moderate reaction. In the latter instance the bears were disappointed, the market on Thursday being strong and advancing, while at no time has the bearish pressure seemed to induce liquidation, or, indeed, any specific selling, except to secure profits, and at declines a marked disposition to purchase stock developed itself. On Friday further advances were scored, and large interests in the market seem to be generally working on the bull side of the account.

The bond market has exhibited the effect of the influences above referred to in decided degree. Governments have been quiet and firm, and investment issues show a better demand, and in some instances, appreciable recoveries. Transactions in municipal obligations are still arrested by the financial uncertainty, and little or nothing is doing in that department. On the Stock Exchange, however, the low-priced and speculative bonds have been active and advancing, a feature being the presence of foreign buying orders. Reading securities naturally shared in the improvement of the stock, as explained below.

Reading securities have, indeed, ranked as features of the market. The recent decision of the court sweeping away all objections to the foreclosure sale, and the prompt offer of the property for sale on Wednesday, and its purchase by the reorganization committee, naturally aroused great interest, and points not only to the speedy carrying out of the plan; the restoration of the company to solvency, and of the stock to its former position as a favorite speculative. Rumors as to the intentions of the reorganizers have been plentiful, but the definite facts are that interests formerly identified with the manipulation of Reading were buyers, and their example was followed by the traders, the result being an advance of the stock from 15¼ (third installment of the assessment paid) to 19. A reaction followed to 17¾, attributable to the prompt calling of the fourth installment. The first incomes rose from 32½ to 35⅞, and the other juniors were correspondingly strong.

Sugar has been one of the leaders, and, as usual, was erratic in its course. Advancing to 114, it broke under bear selling to 110½, and rallied on covering and manipulation to 113½. St. Paul was very strong, advancing from 70⅜ to 72⅞, Burlington rising from 66⅞ to 70⅜, and Rock Island from 59¼ to 62⅜. Covering in Western Union carried the price from 81 up to 84⅞, and Manhattan advanced from 85¼ to 89⅝. Louisville & Nashville hung fire on account of the lack of foreign support in it. Among the low priced stocks and specialties, Tennessee Coal went up from 20½ to 23¼, Missouri Pacific from 17¾ to 21⅛, Wabash preferred from 13½ to 15, and Northern Pacific preferred from 19 to 21.

Boston Stock Market.

More activity has been shown, and values generally have hardened. Atchison closes ¾ higher, with Chicago, Burlington & Quincy 2⅜ points up and active. Boston & Montana closes 3⅝ points higher, with Butte & Boston more active also. Sugar has sold well, with prices ¼ point lower at the close, while Bay State Gas has been active and has advanced ⅛ for the week. United States Leather, preferred, has advanced 8¼ during the week.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE IMPROVEMENT.

MODERATE GAINS OVER LAST WEEK IN INDUSTRIAL AND COMMERCIAL LINES—EASIER MONEY MARKETS—NO LIKELIHOOD OF RADICAL IMPROVEMENT PRIOR TO ELECTION.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, September 25.—There is rather more doing in most lines of merchandise, although operations are of moderate proportions. The money market continues unfavorable for general business, owing to its stringency, but rates are a trifle easier. Commercial paper is dull, with the choicest single-name paper at 7@8 per cent., and double name at 6½@7 per cent. on four and six months time. Some factory paper with selling-house endorsement has sold as low as 6 per cent. Collateral loans are quoted at 6@7 per cent. The boot and shoe market is quiet, although large lines of samples are being taken. Some buyers of women's goods from the far west have placed part orders for spring goods, but the tendency of jobbers is to not place many case orders until after election. Leather is firmer and selling fairly. Hides are not offered freely and quoted firm.

Providence, September 25.—While general business remains quiet the tone is slightly improved among manufacturers of textiles and jewelry. At the present price of cotton there is declared to be no profit to the manufacturer. In cotton yarns the curtailment to four days a week continues, and orders are for present necessities.

Philadelphia, September 25.—Wool sales continue small but prices keep firm. There is a little better demand for dry goods, but conditions have not materially improved. Some textile manufacturers whose mills have been idle for weeks are starting up on short time, while there are others preparing to shut down for a month or two, orders received not being sufficient to keep them going. Boots and shoes show but little increase in sale. Complaints are made in all lines of inability to make collections.

Pittsburgh, September 25.—A further increase is noted in the volume of business. Country buyers are numerous, and orders sent in by traveling salesmen, while not as large as in some previous years, are satisfactory. A slight improvement is noted in collections. Money is somewhat easier than it has been, local banks now being able to get rediscounts from eastern connections. There has not been much business done in the raw-iron line here during the week, but the market is strong at present quotations, and the outlook is promising.

Baltimore, September 25.—Matters appear to be moving along fairly satisfactorily in most lines. Dry goods, notions, clothing and kindred trades report that, while there is no great rush of orders, they cannot complain, and that they are doing as well as can be expected, taking all things into consideration. Other lines are dull, but as it is their usual dull season no surprise is expressed.

West and Northwest.

Cincinnati, September 25.—Trade is better.

Cleveland, September 25.—Business continues to move along the most conservative lines, the week developing no special change.

Detroit, September 25.—The general situation in trade continues quiet. Better feeling in some lines, but collections are still slow.

Chicago, September 25.—The jobbing trade has not increased to any extent during the week, but there has been a fair volume of business, and a good many interior buyers are in the city. The latter have done more looking around than buying, but sales of dry goods compare favorably with those of the same week last year. With the clothing men no improvement is noted, the sales being only moderate. The shoe houses are hampered by the selling of bankrupt stocks at low prices, which they have, in a measure, to meet. There is no increase in the calls for leather, which is selling cheaper in proportion than hides. Tanners are not buying hides heavily, although the edge is off the latter. Sales of seasonable hardware have increased, and there is a liberal business in pig iron, with a steadier feeling, it being easier to secure former asking prices. Orders for iron and steel do not increase. In other lines there are no new features. Potatoes are lower, with increased receipts. Produce generally is selling fairly. Wool receipts 541,873 pounds. Money easier, with banks more disposed to make loans. The demand is not large. Stock exchange settlement is progressing slowly. Collections are slightly better.

Louisville, September 25.—A fair amount of business is being transacted in dry goods. Hardware, groceries, boots and shoes are about the same in volume as last year.

St. Louis, September 25.—The colder weather has in a measure stimulated business in numerous lines, and there is evidence of a returning confidence. Jobbers in dry goods report cotton goods selling well at advanced prices, and orders are being received in increased numbers. Prices of boots and shoes are unchanged, with an inclination toward an advance, due to scarcity of leather. Wool is active at present market quotations, and current receipts are meeting with ready sale. There is a better demand for leather, the advance in the price of which is equal to 4 per cent. Manufacturers are placing orders on that basis. The lumber trade is becoming more active. Heavy buyers throughout the north and east are sending out inquiries and locating stocks, apparently for future use. The iron market is practically unchanged. The consumption of galvanized iron and tinplate continues satisfactory. There is a general tendency to scrutinize credits closely. Collections are fair.

Kansas City, September 25.—Business in all lines is quiet, with slow collections. Live-stock receipts are liberal, with good values.

Milwaukee, September 25.—The volume of business remains, as heretofore, restricted to immediate wants, and no marked improvement expected until after election. Collections are slow.

St. Paul, September 25.—The trade situation is not materially changed from that of a week ago, but is hardly up to corresponding week of last year. There is said a disposition to delay marketing of crops, and collections are only fair.

Duluth, September 25.—General trade is quiet and collections are unsatisfactory. There is more life in the grain business, and prices have advanced several points. More confidence is manifested in general business and financial circles, due largely to favorable conditions at eastern centers of trade.

Omaha, September 25.—With the exception of the grocery line, trade is very dull, and collections are exceedingly difficult to make.

Southern Cities.

Charleston, September 25.—Business in all lines is the same. Cotton is coming in freely. Collections are still improving.

Savannah, September 25.—An increase is reported in wholesale circles, with a slight increase in collections. Retail trade also reports an increase in both, due to cool weather and return of absentees. Naval-stores receipts are about same. Shipments are heavier. Large shipments have been made to Hamburg. Turpentine prices are tending upward, as are those for higher grades of rosin. Market firm.

Atlanta, September 25.—Some country buyers are in the city. Wholesale dry goods, clothing, shoe, and hat and cap houses report fair trade and good country collections.

Augusta, September 25.—Good business continues in jobbing circles, with satisfactory collections. Country merchants are reported to be doing very well and paying off old indebtedness.

Jacksonville, September 25.—No change is noted from last week.

Chattanooga, September 25.—Business has fallen off very perceptibly during the past week. The decrease is attributed to interest in the coming election. Groceries hold up pretty well. Money is held very close.

Nashville, September 25.—The volume of jobbing trade keeps up to a good point for the season with activity in groceries. Money grows steadily closer; outside lenders require strong collateral. Country collections are fair. City retail trade is lagging.

Memphis, September 25.—General trade shows a slight improvement, especially in boots, shoes and dry goods. Collections are fair.

New Orleans, September 25.—General trade is not so good as in the previous two weeks, but fairly active for the end of the month. September cotton receipts have been very heavy and put a good deal of money in circulation which will help collections. Rice receipts are increasing and the market is steady. There is only a light stock of the old crop of sugar left. The market is quiet and steady. Western grain continues to move freely for export. Money is in good demand for crop purposes at 7 to 8 per cent.

Galveston, September 25.—Some improvement is noticeable in trade in all lines. Collections are reported coming in rapidly.

Pacific Coast.

San Francisco, September 25.—General merchandise markets quiet and collections slow. Continued heavy shipments of barley are made to Europe. Wheat freights are firm at 31s. 6d. Fruits are in fair demand. Produce market dull.

Portland, September 25.—Improved price has stimulated sales of Walla Walla wheat, but Willamette valley farmers are now holding. There are no sales of wool. Some shipments are being made on consignment. The Oregon hop crop that will be marketed is estimated at 50,000 bales. The price for choice is 5c. to 5½c., poorer grades being neglected. Retail fall dry-goods trade has just begun and so far is less than last year.

Tacoma, September 25.—The railroad lumber trade shows a slight improvement, and the cargo trade keeps up well. General lines continue to lack the usual stimulus felt at this time of year.

Seattle, September 25.—Trade in general has been good, with the exception of hardware, from lack of building, and mill operations and seeds, from lack of rain. Wheat is arriving freely and has advanced in price, as has also flour in sympathy. Another Japanese line has steamer due to load lumber exclusively at this port.

Canada.

Toronto, September 25.—Business is fairly active in wholesale departments, and a much better feeling prevails. Payments are improving. Prices of leading staples are firm, and the wheat market is higher.

Montreal, September 25.—Very little change is recorded in trade circles. Business is fairly good, but the general volume is light, and prices continue low. Manufacturing industries and interests depending thereon show a falling off, uncertainty as to tariff changes being the cause. Quebec City and eastern district report collections slow and no general improvement. Shoe manufacturers are busy, jobbers having given considerable orders recently.

Halifax, September 25.—There is a slight improvement in wholesale circles this week, but the volume of trade is light and buyers are very conservative. Collections are fair. Crop reports continue satisfactory, the apple crop in Nova Scotia being the largest known. The Labrador fishery is reported to be a failure, causing much destitution among the population of northern Newfoundland. St. John, N. B., reports large shipments of lumber to the British markets, but shipments to the United States continue small. General trade is very quiet, with practically no change in quotations.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM SEPTEMBER 12, 1896, TO SEPTEMBER 18, 1896, INCLUSIVE.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500
Jan. 9	3,471,681	2,587,178	2,409,850	3,308,907	4,183,121
Jan. 16	3,202,124	3,564,459	3,332,050	3,037,687	4,522,219
Jan. 23	3,849,271	2,840,750	2,947,950	2,531,385	3,557,395
Jan. 30	2,550,206	2,483,858	2,083,100	3,123,745	4,740,451
Feb. 6	2,907,354	2,020,521	2,678,000	3,931,731	3,641,623

Dry Goods.

The general market is steady, and a better jobbing movement is in progress which helps business at first hands. Cotton goods are firmer, and manufacturers have generally advanced prices. At the advance the demand has been less, which is due to operators having supplies of the low-priced goods on hand, and being in position to hold back and test the market. More machinery is being started up. The demand for seasonable printed fabrics is steady, and supplies are not excessive. Ginghams are in quiet demand, but steady. Dress woolens are quiet, but a fair business is doing in the cheaper-cost fabrics, this class of goods taking the lead this season. Flannels are quiet and steady. Men's-wear woolens continue in slow demand, although more orders are being placed as the season advances. It is the lower-cost goods that are being taken.

Wool.

Sales this week show a further increase, the better demand noted last week being continued. The indications all point to a better market, and it looks as though the low point of values had been reached, and the tendency was now the other way. The bulk of the business has been in territory wools, nearly 4,000,000 pounds being sold in Boston this week, the purchases being mostly of large lines, running from 100,000 to 500,000 pounds each. The English demand continues, but high ocean freight rates and scarcity of room is unfavorable to present sales abroad. Prices on territory wools have hardened, and about 28@30c., scoured, is now quoted firm on good lots of fine medium and fine. Fleece wools are selling rather better, and fine wools are in moderate supply and firmer. Australian wools are steady, with rather more selling. London auction sale of wool opened 2½@5 per cent. lower, and is showing more tone as the sale advances. The East India wool sale in Liverpool opened at par to 5 per cent. off, but became steadier.

A CURIOUS EXPERIMENT.

The London *Times* says: "A species of insurance against the material consequences of want of work is effected in England by many voluntary trade organizations. Switzerland is endeavoring to compass the same end by legislation. Optional insurance against loss of work is offered to its settled laboring classes by the municipality of Berne; Basle proposes to introduce an obligatory system shortly. Compulsion is already in force in the town of St. Gall, where the municipal council manages an industrial insurance fund. All male resident wage-earners in St. Gall whose average earnings do not exceed five francs daily are bound to join. Apprentices and laborers under age in receipt of less than two francs daily are exempt, while women may be allowed or required to join, according to circumstances. Persons already belonging to a voluntary insurance organization are relieved of the obligation to join. Relief is only granted for sixty days in any one year, and it is withheld alto-

gether when the insured is without work owing to fault of his own (this includes strikes), and when, being able-bodied, he declines to accept work suited to his position and capacities when it is offered. Compliance with the law is understood to be not cheerful, but grudging. With a revenue from premiums that is small when compared with the calls made upon it, especially in winter, the insurance fund has to rely upon an annual municipal grant. During the first six months' operation of the fund (July 1 to December 31, 1895) 3,430 persons were registered, of whom 1,678 were married men and 1,666 single. By June of the present year 4,200 persons had been insured."

AMERICAN PIG IRON IN CANADA.

The *American Manufacturer*, Pittsburgh, says: "In last week's issue we referred to the recent shipments of southern pig iron to Europe. We then stated that the main reason for these shipments might be found in the depressed condition of trade in this country, rather than in the ability of American pig-iron producers to enter the European market. Proof of this fact is seen in the recently increased shipments of American pig iron to Canada. It is announced that the depression in iron values in the United States has led to free offers of American pig iron during the past month in the eastern Canadian market. The figures of pig-iron imports at the port of Montreal show that more American pig has been coming there this year than last. From May 1 to July 1 the imports of American pig at Montreal were 863 tons, against 615 tons for the same period in 1895, or an increase of 250 tons. In the same time the imports of British pig were 671 tons, against 1,153 tons in 1895, a decrease of 482 tons.

"Some observers inclined to take a more superficial view may conclude from the foregoing that American pig iron is pushing the British product out of the Canadian market, but such is not the case. The very low prices which have been reached in the American pig-iron trade during the past six months have let our product into Canada to some extent, but such a trade is really built on sacrifice sales."

OUR CATTLE-RAISING INDUSTRY.

An interesting report upon the United States cattle-raising industry, and the export of cattle and beef to Great Britain, prepared by Mr. O'Beirne, one of the secretaries of the British embassy at Washington, has been issued by the British Foreign Office. "The extent of the influence on English prices of the import of American cattle and beef may be estimated," says the London *Economist* in commenting upon it, "from the fact that in 1894 the United States provided some three-fourths of the total imports of live cattle, and nearly six-sevenths of the import of fresh beef into Great Britain. In the first five months of the current year the imports both of cattle and beef from the United States have been so large as to make it probable that the aggregates will show an increase over all previous years; but the American agricultural returns show such a remarkable diminution in the total stock of cattle during the past four years as to suggest the question of how far it is probable that the exportation will keep pace in the near future with the growing English demand for fresh beef. Mr. O'Beirne deals at length with the development of the 'ranching' business in Texas to begin with, and afterwards throughout the western and northwestern states, and its marked decline in the past few years. By the year 1885, which forms the high-water mark of the industry, the number of cattle on the western ranches had reached a total of 16,000,000 head, or nearly one-third of the entire number then in the states; but as settlement spread, and the cost of raising cattle increased, the business steadily declined, and it is stated that in the two chief ranching states—Montana and Wyoming—the number of cattle is now under 2,000,000 head. Under these altered conditions the cattle-raising industry has shown a remarkable change in the results. Between 1870 and 1885 the number of cattle in the United States, exclusive of dairy cows, had risen with the development of ranching from 15,000,000 to 35,000,000; between 1885 and 1892, though the decline of ranching had now commenced, the number of cattle continued slowly to advance till it reached the total of 37,500,000 in 1892; but in the succeeding four years, to January, 1896, it is estimated to have fallen to 32,000,000, being an average decrease of over 1,333,000 head in each year. In each of the two last years of this period it has decreased by about 2,000,000 head, or over 5 per cent. Recently the industry has been concentrated in a small number of the western states, owing to the establishment of great slaughtering and packing agencies in Chicago, Kansas City and other western cities. As showing the growth of the dressed beef trade at the chief packing centers, the following table is of interest:

COMPARATIVE YEARLY RECEIPTS OF CATTLE AT KANSAS CITY, OMAHA, CHICAGO AND ST. LOUIS FROM 1884 TO 1895.

	Number			
Year.	*Kansas City.*	*Chicago.*	*Omaha.*	*St. Louis*
1895	1,613,454	2,588,558	586,103	733,526
1894	1,699,193	2,974,363	621,512	663,657
1893	1,660,807	3,133,406	852,436	756,485

1887	669,224	2,382,008	239,337	387,709
1886	490,971	1,963,900	148,515	307,244
1885	506,627	1,905,518	116,963	311,702
1884	535,526	1,817,697	88,603	390,569

Prices ruled high in the five years preceding 1885, but during the succeeding five years there was a decline of as much as 35 per cent., partly from causes affecting the supplies of commodities in general, but chiefly as the result of the excessive supplies of cattle thrown upon the market with the rapid development of ranching. At the same time the ranching area was rapidly diminishing, and ranching was being replaced by more expensive and less profitable methods of cattle raising. But with a stationary or possibly diminishing supply there is a steadily increasing demand for American beef for export, though there has been a great falling off in consumption throughout the states. With regard to the exports of live cattle and dressed beef to this country, Mr. O'Beirne gives the following figures for the past ten years:

Year.	*Cattle, head.*	*Fresh beef, 1000 pounds.*
1895	305,008	190,736
1894	345,734	193,331
1893	280,996	205,911
1892	378,107	219,102
1891	345,797	192,456
1890	360,589	171,032
1889	193,167	137,286
1888	124,562	93,466
1887	96,960	81,917
1886	114,193	97,149

It is still a matter of doubt which of the two branches of the American beef export trade offers the larger profits, though the Secretary of Ariculture thinks it more profitable to export live cattle."

LONDON TO CHINA BY RAIL.

The writer of an article in the London *Times* "predicts that one of the most remarkable revolutions in the conditions of transport that the world has ever seen will be brought about by direct railway communication between Calais and Peking, resulting from the completion of the great Transsiberian line and its connections. The length of this line is 4,547 miles from Cheliabinsk to Vladivostok. More than one-third of the undertaking is now completed, and during 1895 not less than 918¼ miles were constructed. The line should be practically completed during the next two or three years. It is officially stated that there are at present engaged upon the work over 70,000 workmen. One of the branches projected was a line from Kiakhta to Peking, some 620 to 700 miles in length. Once at Peking, the line could be carried without difficulty to Tientsin.

"A line between St. Petersburg and Peking, with trains traveling at the same rate as the Chicago & New York Pullman (limited) would enable passengers to cover the distance in about five days. Even at the usual speed of Russian railways Peking should easily be brought within eight days of St. Petersburg, or little more than ten days from London. At present nearly one-half of the total import trade of China is carried on with the British Empire. The United Kingdom in 1894 supplied China direct with imports four times as much in value as those furnished by the rest of Europe, and the direct imports of that country from the United Kingdom have almost doubled in the period 1884–94. What, however, would be likely to happen to English trade supposing direct railway communication to be established between St. Petersburg and Peking, the distance being not much over four thousand miles? It is a question mainly of cheap transportation. Mr. Andrew Carnegie, writing in last month's *Engineering Review*, points out that in the United States a large quantity of freight is being carried by rail at seven miles for 1d. If freight were carried from St. Petersburg to Peking the whole way by rail at this rate it would mean a charge of about 50s. per ton. Such a figure would not compare favorably with the present rates of transport by sea, so the projected line would not make an end of the fleets now trading between British ports and Hong-Kong. But it would, nevertheless, be likely to aid Russia to some extent as against our own country in respect of certain descriptions of trade not carried in large quantities.

"There is, however, another aspect of this matter. When the Transsiberian line has been completed as far as Vladivostok there will only be 600 nautical miles to traverse between Vladivostok and Nagasaki, and there will be 1,000 miles between the extreme east of Russia and Vassounga, so that if a speed of only 35 versts per hour is assumed on the railway, London passengers should be able to reach Japan in 16 days and China in 17 by this route. Hitherto the shortest route to these countries—across the Atlantic and thence via the Canadian Pacific line—has involved a journey of 12,800 nautical miles, and has taken 28 days to Japan and 30 days to China.

"Mr. Archer Baker, of the Canadian Pacific Railway, writes to say that in one instance the journey from London to Japan by the Canadian route has been accomplished in less than 20 days. With a fast Atlantic service, he says, and a slight acceleration of railway speed across Canada and on the Pacific, it could be done regularly in that time. He doubts whether the slight saving of two days in time would compensate for the long and dreary train journey across the wastes of Siberia."

THE RESOURCES OF MADAGASCAR.

The London *Journal of the Society of Arts* says: "A correspondent of the French *Monde Economique* says that the President of the republic has recently signed a decree regulating the working of gold, precious metals and precious stones in Madagascar. The decree guarantees to gold seekers and miners the rights of their discoveries and the fruits of their labors. The nature and importance of the gold fields are, it is said, well-known; all that is required is capital to work the immense wealth that underlies the soil. After Australia and Borneo, Madagascar is the largest island in the world. It has an area of 600,000 square kilometers, and it is remarkable for its geographical configuration, and its fauna and flora. The interior of the island is a compact mass of extinct volcanoes, and of mountains which slope down to the sea. There are virgin forests, which form a belt between the coast and the mountains. The coast is, as a rule, swampy and unhealthy, and this is in a great measure caused by a large number of streams which water Madagascar, and which form a vast marsh in their course. These streams, when once embanked, could well be utilized for trade and industry. The bay of Diego Suarez called the citadel of the Indian ocean, comprises four ports, and might become the finest anchorage in the world. All the fleets in the world might anchor there easily, and military, naval and commercial establishments might be founded there. The roadstead is safe and well situated; a magnificent basin, 10 kilometers long and 7 kilometers wide, with a depth of 20 to 50 meters, with a sandy bottom, occupies the center of it. It is in the plains of Tsianaka and Imerina that the finest pasturages are found, and these extend for a length of 400 kilometers. This is the healthiest and the most sparsely populated part of Madagascar. Towards the south there is a vast region still unexplored. As far as can be estimated, there are 4,000,000 of people, of whom 1,500,000 are Hovas, and therefore labor would be by no means scarce to develop the resources of the country. Accustomed to hard work, and used to the climate, to a very spare diet, and to the pestilential exhalations of the swamps, the natives are eminently fitted for manual labor. Europeans pay them at the rate of about 6d. a day for their work. The soil is so fertile that everything grows there. Tobacco, cacao, vanilla, spices, maize, tapioca, the castor bean and ground nuts abound. There is an abundance of India-rubber trees in all the forests, but owing to the rude method of collecting the sap, many are destroyed. The littoral of the east of Madagascar is specially suitable for the cultivation of vanilla, and capital and skilled labor are alone required to develop this industry. A native flax is cultivated in the southeast provinces. Orchilla is collected on the west coast of the island, and it is said that the vine could be cultivated with advantage in Madagascar. At present both wheat and wine are imported from France. There is another plant which could well be grown in Madagascar, and that is the tea plant. The forests abound in timber, which is useful for building purposes and cabinet-making—ebony, lignum vitæ, teak wood, sandal wood, and nato wood are found in profusion. Ebony is sold at about 200 or 275 francs (£8 to £11) the ton. The mineral wealth of the island remains almost unexplored, but it is rich in metals, and gold certainly exists in considerable quantities. Some of the precious stones are also found, and pearls are discovered in some of the bays. A species of anthracite coal is found in the northwest of Madagascar, and is seen cropping up in some of the river banks. There are coal mines in abundance. One of these fields has an extent of 111 miles in length and 25 miles in width, it is not far from the coast, and thousands of tons of coal of a quality equal to the best Welsh can be obtained from it. Petroleum springs are found nearly on the surface of the soil. Iron is abundant, and tin, copper, antimony, rock crystal, and bitumen are found almost everywhere on the island.

ARTIFICIAL SILK.

The Philadelphia *Ledger* says: "An interesting new product, to be seen at the Philadelphia Museums, 233 South Fourth street, is artificial silk, which is made from wood pulp, old rags, cotton stalks and various other sorts of vegetable waste. From information received from correspondents the Museums are enabled to give a description of the process of this new fabric.

"All vegetable fiber, such as wood, flax, cotton and jute, may by a process of digestion, treatment by acids and alkalies, be reduced to what, in the commerce of chemistry, is known as cellulose; in other words, they become mere cellular tissue, the substance secreted by the living protoplasm of a vegetable cell, in order to form its investing membrane or cell wall. Cellulose is, indeed, made from wood pulp, the débris from cotton, jute and other spinning industries, etc., for a variety of commercial purposes, and it is this material which is the basis of artificial silk.

"The process of preparation of this fluid is a purely chemical one. It is in the subsequent treatment of the fluid and its conversion into a textile fiber that the main interest centers, from an industrial point of view. This process is shown in operation upon a machine which is a modification of the ordinary flyer-spinning frame. The fluid, a muddy, yellowish substance, is contained in a glass jar, from which it is conveyed through pipes to a row of small bent glass tubes, each having an extremely fine nozzle or orifice. These tubes are arranged in a hollow trough of water, the orifice being beneath the water level. As the fluid leaves the nozzle the water removes 60 per cent. of the solvent, and the fluid immediately coagulates, and it is drawn off in a remarkably fine filament of brilliant luster, and, when dry, of greatest tenacity. Half a dozen such filaments are gathered together and spun. The yarn can be spun to any thickness of count, and a thread, it is claimed, is of even diameter throughout, unbroken, and it may be produced of unlimited length. The artificial silk will stand washing and ironing without losing luster or without any impairment of color. A company has been formed to manufacture it, with a capital of £108,000. Its works are near Manchester, England. The samples now on exhibition at the Commercial Museums show all the patterns that have as yet been turned out. It is believed that samples of this fabric are to be seen nowhere else in this country. It is being turned out in England for the South American markets at a price of 9½d. (19c.) per yard, and the fabric is made of a uniform width of 19½ inches. It seems likely that the new wood silk will come into general use for goods in which an attractive appearance is more desired than lasting qualities, such as fringe, braid, gimp, neckties, etc."

OUR RANK AS RUBBER MANUFACTURERS.

The *India Rubber World* says: "The constantly increasing production of crude India rubber is evidence not to be gainsaid that there has been a corresponding increase in the volume of rubber manufacturers. While some branches of the industry in America have not been particularly active of late, we have been publishing reports from England and the continent of Europe of enlarged plants and an increased production of rubber goods. Both at home and abroad it appears that in many lines the rate of profit has declined, but this fact has only served to incite manufacturers to offset reductions in profits by a greater outturn of goods. Doubtless we shall be able before long to record a more settled condition of the industry, with prices of rubber goods better adjusted to the cost of the crude gum, and with general business conditions more favorable to active buying by consumers, though the margin of profits will remain narrower than in the period of development, when many kinds of products were protected by patents and many secrets of manufacture were successfully guarded. One thing certain is that more rubber goods will be consumed as time advances, instead of fewer, and that, whenever a genuine demand exists for any class of goods, it involves in the end a profit to the producer."

"A question well worthy of study by American rubber men at this time is what is to be the future rank of this country with regard to their industry. The development of the industry in the United States occurred under such circumstances as to entitle us clearly to rank as the leaders in rubber manufacture. Even after our manufacturers, having supplied to the limit the home demand for rubber goods, went to Europe with their skill and their capital and established factories there for supplying as far as possible the foreign demand, the consumption of crude India rubber in America continued larger than in all other countries combined. We practically threw away a good existing export trade in rubber goods forty years ago, when some of our people moved across the Atlantic and began manufacturing in new fields. Since 1855 we have seldom exported in any one year one-fourth as many rubber shoes as went abroad from our factories in that year, for the reason that Europe's demands were filled thereafter by factories erected on European soil. Whether, under different management, much of this demand might not have been met from this side of the ocean is no longer a pertinent question. What remains to be considered is whether the opening for rubber goods which has been developing gradually outside of Europe and the United States is to be filled by the manufacturers of the old world or of the new.

"In the whole history of the industry in England her exports of rubber goods never before reached so large a value in the first six months of any year as during the months of January–June, 1896, inclusive. The same thing is true certainly of Germany and of France, and it is believed to be true of the other European countries in which rubber factories exist. These increased exports have not been exchanged between the different countries named so much as they have gone outside and beyond all of them, into countries which only of late have become important buyers of rubber goods. While Americans need never hope again to ship rubber goods to England and Germany at such a rate as in the early days of the industry, the non-rubber manufacturing countries are as open to us as to the factories of Europe. In 1855 we exported 1,014,158 pairs of rubber shoes, and in 1895 only 383,793 pairs, while in many of the intermediate years our shipments were even less. But no other country manufacturing rubber goods having once gained a foothold in the foreign trade has ever permitted such a falling off.

"It is true that the establishment of factories in England, France and Germany, as already mentioned—and largely by American capital—accounts for the decline in our exports of some lines of rubber goods to Europe. But is that any reason why the demand which has come into existence elsewhere should have been overlooked by Americans and conceded to their foreign competitors? Nowhere else are there such facilities for manufacturing rubber footwear, for instance, as in America; nowhere else is the rubber footwear industry so stagnant at this time. It must be said, however, to the credit of the rubber industry in America, that, taking into account all its branches, the exports have been larger during the past year than in any preceding year, and we believe that such exports from this time on will increase rather than diminish. But the fact remains that we have been losing rank of late in respect to the percentage of the world's production of India rubber consumed in the United States."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 3, 1896.

The most notable event in the political world during the week has been the substitution by the followers of Mr. Bryan in New York state of another candidate for governor in place of Mr. Thacher, who was nominated at Buffalo. Mr. Thacher decided, after some days' reflection, that he could not, with his views upon the money question, consistently run as the nominee of a convention which unqualifiedly indorsed the Chicago platform, and his response to the committee sent to notify him of his nomination was a declination of the honor. His place upon the ticket was filled by the advancement to the first place of the nominee for lieutenant-governor, who has declared himself to be a supporter of the Chicago and Buffalo platforms. It is needless to say that this change of standard-bearers is not regarded by experienced observers as a circumstance tending to strengthen the ticket in the state, which, indeed, is quite generally expected to go heavily against the Chicago nominee.

Government receipts for the month of September amounted to $24,584,244, which represents a decrease of nearly $1,000,000 as compared with the preceding month, and of nearly $3,000,000 as compared with the corresponding month of last year. The receipts from customs were a little below those from internal revenue sources, whereas in September last year the customs revenue was nearly $2,400,000 in excess of that from internal sources. The expenditures for the month amounted to $26,579,535, which represents a decrease of over $9,100,000 as compared with last month, but an increase of over $2,200,000 as compared with the corresponding month of last year. The largest increase as compared with September, 1895, was under the head of navy expenditure, where the increase amounted to nearly $1,300,000. There was an increase of over $1,000,000 in civil and miscellaneous expenditures, one of over $700,000 on account of pensions, and one of over $120,000 on account of interest. The decreases comprised nearly $900,000 in expenditures for the War Department, and over $85,000 on account of Indians.

For the quarter ending with September the receipts amounted to $79,175,550, which represents a decrease of nearly $6,400,000 as compared with the corresponding quarter of last year. The internal revenue for the quarter exceeded that from customs by over $2,000,000, whereas last year the revenue from customs exceeded that from internal sources by over $7,000,000. The miscellaneous receipts for the quarter exceeded those for the corresponding period of last year by a little over $1,500,000. The expenditures for the quarter amounted to $104,369,679, which represents an increase of over $8,900,000 as compared with the corresponding period of last year. The largest increase was under the head of civil and miscellaneous expenditures, amounting to nearly $7,500,000. There was an increase of nearly $2,500,000 in the expenditures on account of the navy, one of over $1,200,000 on account of pensions, and one of over $600,000 on account of interest. There was a decrease of over $3,000,000 in the expenditures for the War Department.

A statement regarding some of the effects of the Raines liquor law in New York has been prepared by the senator whose name it bears. He says that while under the previous law there were 10,118 licenses issued in the city of New York, which produced a net income for the city of $1,656,239.78, up to the first of August, under the Raines law, there were 7,310 certificates issued, from which there was received a total sum amounting to $4,857,918.25. According to these figures, while there was a reduction of 27 per cent. in the places authorized to traffic in liquor, there was a large increase in net revenue, amounting to over $3,200,000. By the law one-third of the total revenue received in the city of New York, or $1,619,306.08, has been paid into the state treasury, while $3,238,612.17 has been paid into the treasury of the city of New York. This sum is nearly double the amount New York city received in 1895 under the old law, and there would appear to be no reason, Senator Raines says, why the great charities of the city of New York should not receive more money this year than they did last year.

It is announced in advices from Washington that the report of the Venezuelan Commission on the British-Venezuela boundary line dispute will be made to the President shortly before Congress convenes in December. It was expected that the report might be ready by November 1, but complications in connection with the work in Holland have caused delay. The members of the commission have been at work on different branches of the subject all summer, with a view to reaching a decision as early as possible. Justice Brewer, the chairman of the commission, had called a meeting of the commission for October 9, and it was thought that at that meeting all the data could be submitted and a decision reached. A delay has, however, occurred incident to the work of Professor Baer, who has been ransacking the Dutch archives in Holland. His investigation led him to London. Justice Brewer has now received a cablegram from him saying that his work in London has been completed and that he will return to Holland, but can not finish before the middle of October. With the submission of the report of the commission its functions will come to an end. No hint as to the nature of the report is forthcoming.

An interview has been obtained at Seattle with some of the members of the commission which has been investigating conditions of life among the fur seals. According to Dr. David S. Jordan, the head of the commission, that body has made the first detailed census of fur seals and the first complete examination of the various causes of their death. It appears that there is still a vast body of fur seals on the islands, more than the commissioners were at first led to expect, but the number is steadily declining. The only cause of this decline is the killing of females through pelagic sealing. The females are never molested on the islands, but three-fourths of those killed in Behring sea are nursing females. The death of the mother causes the death of the young on shore, so that for every four fur seals killed at sea three pups starve to death on shore. Pelagic sealing as an industry has, it is said, already cut its own throat, as the fleet this year will not pay expenses. The killing of surplus young males, as provided by law, has always been a benefit to the herd. The commissioners believe that the way is open to an honorable and amicable settlement of this question in a manner highly satisfactory alike to the United States and England and to Canada, and that there can be no longer any difference of opinion as to any facts in question.

A statement was published this week in a German newspaper calling attention to the fact that the fifteenth anniversary of the international parcels post falls in October, declaring that the United States will join in the arrangement upon the occasion of the international postal congress at Washington next May, and adding that the adhesion of Guatemala and Paraguay are probable. The attention of the Postmaster-General having been called to this statement, he declared that the United States government had not yet determined to enter the international parcels post agreement. He had received letters from postmasters general in Europe concerning the matter, and one letter from Germany especially urging the United States to join the union. The matter will not be determined until the postal congress meets next May. Superintendent Bell, of the Foreign Mail Service, says that the objections heretofore urged to the international parcels post were that it was too complicated. It is possible modifications may be made at the coming congress. Great Britain at present does not belong to the agreement. The United States has parcel post arrangements with some countries on this continent, but none with Europe.

Judging from reports received by the Secretary of War from officers of the Inspector-General's Department, the best results are not being obtained from the present system of detailing army officers as instructors at colleges and educational institutions generally, owing mainly to the alleged lack of concerted action on the part of the faculties. At many of the institutions there is a wide difference of opinion existing as to the advisability of having a military course, and wherever this is the case the officers have encountered much difficulty in their work. As the detail of such men is gratuitous on the part of the government, the War Department expects that at schools where its officers are assigned the military course must be kept up to a high standard. It is represented that at some of the leading institutions a majority of the faculty do not care to have so much time devoted to military work as army officers require in order to make the course profitable, and wherever there is a difference of opinion the school gains little from the instruction.

National bank circulation outstanding on September 30 amounted to $233,552,030. This represents an increase of $4,025,581 for the month, and of $20,789,793 for the year ending therewith. The portion of the circulation based on the deposit of bonds amounted to $214,667,694, which represents an increase of $4,374,120 for the month, and of $26,070,817 for the year ending therewith. The portion of the circulation based on the deposit of money amounted to $18,884,336, which is a decrease of $348,539 for the month, and of $5,281,024 for the year ending therewith. As will be seen, the circulation secured by bonds is increasing, while that secured by deposits of money is on the decline.

HEAVIEST NINE MONTHS' BUSINESS FAILURES RECORDED.

Accompanying tables present details by states, territories and provinces of business failures throughout the United States and Canadian Dominion for the past three and nine months, with comparisons for preceding years, as reported to BRADSTREET'S. Embarrassments of railway and steamship and insurance companies, of farmers, professional people, wage-earners, or those in personal service, are not included, the record being confined to merchants, brokers, miners, manufacturers, bankers, and a number of special trades or occupations not covered in the foregoing.

NINE MONTHS' TOTALS, UNITED STATES, FOR FIFTEEN YEARS.

	No. failures.	Actual assets.	Liabilities.	Per cent. assets to liabilities.
1896	11,280	99,613,765	171,350,292	58
1895	9,299	61,162,107	109,756,723	56

1886	7,518	37,397,000	77,110,000	48
1885	8,433	43,864,000	90,976,000	48
1884	8,303	108,452,000	195,951,000	55
1883	7,358	63,262,000	123,054,000	52
1882	5,307	36,452,000	71,162,000	51

The total number of failures of firms, corporations and individuals in commercial, financial and industrial lines in the United States during the past nine months is 11,280, the largest aggregate for a like period since records of this character have been compiled, the next largest total having been in the corresponding portion of 1893, 11,140, five months of which were marked by panic. The third quarter of the current calendar year brought with it an extraordinarily large number of failures. The first and fourth quarters of a calendar year usually furnish the largest number, and the third quarter generally the smallest, but the current year proves a marked exception. While there are 140 more business failures during the past nine months than in the corresponding portion of 1893, an increase of less than 2 per cent., total liabilities of those failing amount to only 52 per cent. of the total liabilities reported in a like period of 1893. As the number of failures, the totals of assets and liabilities in the panic year 1893 so far exceeded corresponding totals in any preceding year, it is hardly necessary to make specific comparisons for nine months of the current year with like periods prior to three years ago. Totals of failures and of liabilities for nine months of the calendar years 1895 and 1894 were so nearly alike that comparisons of the aggregates for the past nine months with those of the like period in 1895 will prove sufficient. It will be recalled that 1894 was a year of extreme business depression, following the panic in 1893, and that, beginning with March in 1895 and continuing until September or October in that year, there was a moderate revival in trade, particularly in the iron industry, which seemed to warrant the belief that 1896 would bring with it a period of comparative prosperity, certainly a revival in staple lines. But, beginning prior to the holidays in 1895 and continuing ever since, general trade, with a few exceptions, has continued to decline, and has suffered from a depression which, in instances, has been as marked as in 1894. The past three months particularly have been characterized by an extraordinarily large number of business failures, a larger proportion than usual being of concerns with a heavy capitalization. This is unusual in the third year after a panic, at a period when, judged by experience, a revival is in order, and seems attributable in part to the effects of the widespread, active agitation for a change in the standard of value, which appears sufficient to explain the unwillingness of capitalists to make new investments and of traders to anticipate immediate wants. A natural outcome, therefore, has been the serious embarrassment of many concerns which, had demand for general staples become active, might have avoided failure. The nine months' record, therefore, with its 11,280 business failures, $171,350,000 of liabilities and $99,613,000 of assets, shows an increase as compared with the corresponding portion of 1895 of 21 per cent. in number of failures, 56 per cent. in gross liabilities, and 63 per cent. of actual assets, an unusually large proportion, as is the rule in periods when an excessively large number of business establishments suffer embarrassment.

When these records are examined by groups of states it is found that the New England states report totals more nearly normal than any other group, an increase of only 8 per cent. in number of failures, less than 8 per cent. in aggregate liabilities, and 2.3 per cent. in total assets. The most notable increase is shown in the western states, details of which accompany this article—36 per cent. more failures than in nine months of 1895, 130 per cent. more liabilities, and 143 per cent. more assets. Southern states rank next in proportion with 10 per cent. more business failures, 57 per cent. more liabilities than a year ago, and 70 per cent. more assets. In the middle states the increase in the number of failures since the first of January contrasted with the like portion of last year is 26 per cent.; in the amount of liabilities it is 50 per cent., and in total assets 44 per cent. On the Pacific coast the increase in number of failures is 28 per cent., in total liabilities 30 per cent., and in assets 24 per cent. The territories report 25 per cent. more failures than in nine months of last year, but 68 per cent. larger liabilities and 65 per cent. more assets. Northwestern states present a relatively more favorable report, the increase in the number of failures being only 18 per cent., in total liabilities only 27 per cent., and in assets 43 per cent.

The increase in business failures throughout the Dominion of Canada for nine months ending September 30 is 315, a little less than 25 per cent. This rate of increase appears to follow that shown in the United States, but when the rate of increase in total liabilities reported from the Dominion is found to be less than the gain in number of failures, the contrast between the exhibits is more marked. The larger proportion of the increase in number of failures is from Ontario and Quebec, 126 in the former and 150 in the latter, although it is noticeable that an increase of 44 failures is announced from Nova Scotia. Manitoba and British Columbia suffered fewer business failures this year than in nine months of 1895. A feature is found in a smaller total of liabilities of Canadian business failures in the Province of Ontario during the past nine months than in the like period a year ago, while in the Province of Quebec this year's total liabilities are nearly 50 per cent. heavier than in nine months of 1895. There are 12 business failures reported from Newfoundland, against 40 between January 1 and September 30, 1895. The relative unimportance

of the 12 failures is indicated by the total liabilities being only $42,866, one-tenth of liabilities reported by the 40 embarrassments of last year.

THE STOCK MARKET'S RECOVERY.

Seldom has a revulsion in the temper and tendencies of the American stock market been more complete than that which has taken place in the past six weeks. Between the date of the national political conventions and the promulgation of the platforms on which the presidential canvass is being made and the middle of August Wall street experienced a veritable panic, which was not the less severe because it was silent. Not only did stock values decline to a level below that reached in the Venezuela disturbance of last December, but in many cases the quotations were even lower than anything witnessed in the panic of 1893. A vast amount of liquidation, both of speculative and investment holdings of securities, was produced, and the market was absolutely bare of buying power. The suddenness of the change in sentiment which followed is even more remarkable than the improvement in quotations. To call the upward movement that began before the end of August and has continued almost without intermission during September by the convenient title of a "boom" might be an exaggeration. One of the necessary features of a boom is the presence of excited and active public interest in speculation. That has been lacking in this instance. The market has been and continues to be mainly a professional one, though public attention has naturally been attracted by the movement, and symptoms of a revival of public and European participation in the market have made their appearance within the past week, affording a promise that the effort to discount the better financial and political prospects of the country is not likely to halt for the present.

To illustrate the course of the market the following tabulation of prices of a number of the more active speculative railroad and industrial shares has been prepared. The lowest prices in 1895 were generally made in December during the Venezuela war scare. These are followed by the highest prices attained on the recovery that set in in February and culminated when the last bond issue restored the Treasury gold reserves, the highest average point being about April. August 8 was the date at which the market's recent demoralization was at the most acute stage, and the lowest prices of the year, given in the third column of the table, were made at that time. Following this are the closing bid prices on September 30, showing how marked has been the recovery from the extreme decline:

	Lowest, 1895.	*Highest*, 1896.	*Lowest*, 1896.	*Sept.* 30
American Sugar	61¾	126⅝	95	111⅞
Atchison	3½	17¾	8¼	13¼
Burlington & Quincy	60	82⅝	53	70¼
Chicago & Northwestern	87⅜	106¾	85⅛	99⅛
General Electric	20	39½	20	28⅜
Lake Shore	134½	154¾	134¾	146½
Louisville & Nashville	39	55⅝	37⅛	43½
Missouri Pacific	18⅝	29¾	15	21
Missouri, Kansas & Texas	9¼	13⅜	9¼	10¾
New York Central	81½	99⅛	88	92
Rock Island	59	74⅞	49¼	62⅞
St. Paul	53¾	79⅞	59⅞	71¾
Western Union	82½	87⅜	72¾	83¼
Tennessee Coal	13¼	34¾	13	22⅝
Manhattan	95	113½	73¼	88⅞

In considering the causes for the present rise in stock market prices and the accompanying reassertion of confidence the leading place must be given to the enormous gold imports of the past month. Some weight must, of course, be given to the feeling that the sound money cause is pretty sure to prevail at the November elections. The real trouble began with the adoption of a free silver platform by the Chicago convention in July, and this precipitated the hoarding of gold and the run on the Treasury reserve, which in turn demoralized the money market and brought the stock market to the verge of panic. The steps by which confidence was restored and an apparently desperate situation remedied are easy to trace, and the action of the stock market is their simple and natural reflection. The Treasury gold reserve was the central point of solicitude. It was reduced to about $90,000,000, gold was going out of the country or being locked up by those who feared that the country might go upon a silver basis, and under the circumstances a sale of bonds to replenish the reserve and keep up confidence in the Treasury's ability to maintain the parity of the currency with gold was manifestly impossible. The banks were called on in the emergency, and responded by turning about $20,000,000 of their gold into the Treasury. This aid, however, would have been insufficient but for the action of the foreign banking houses, which agreed collectively not only to discourage gold shipments, but to supply, if necessary, $50,000,000 or more of exchange. Thus the main danger was averted, and soon, without the necessity of any interference by the bankers' syndicate, the exchange market turned in our favor. Hard times and high money checked buying of bills by merchants to remit to Europe, and at the same time grain and produce were forced upon the market, while considerable loans of foreign money were negotiated. The result was the fall in exchange to figures that have brought about the importation of $40,000,000 gold—brought the Treasury gold from $101,000,000 up to $125,000,000, and caused the disappearance of the gold premium. With the influx of specie confidence has returned to the stock market.

THE WESTERN RATE SITUATION.

Drifting from bad to worse, the western railroad rate situation has reached a crisis within the past fortnight. Tariffs have been demoralized in every direction throughout the territory west and southwest of Chicago, the cuts affecting all classes of freight. The Western Freight Association, which organization was supposed to regulate competition within the territory just mentioned, has proved to be inadequate to the task, and the announcement that the Atchison and Rock Island roads had served formal notice of their withdrawal from it was generally accepted as the death warrant of the association. A determined effort is on foot, however, to reorganize the western railroads on a footing similar to that adopted by the trunk lines for the Joint Traffic Association. A meeting of the presidents was held in Chicago, and the steps taken in the direction just indicated met with general approval, though the absence of representatives of some important roads cast a shadow of doubt upon the ultimate success of the scheme.

Passenger rates, it may be observed, have not suffered to any extent as severely as those applying to freight traffic. This points to the origin of the whole trouble, which is found in the increasing competition of the Gulf of Mexico ports (as points of export) with New York and other Atlantic seaboard cities. This has been virtually admitted by the eastern trunk lines, which have ordered a reduction in the rate on corn from Chicago to New York to the basis of 15c. per 100 pound. An advance to 20c. had just been made on September 15, but between the competition of the lake transportation lines and the increasing shipments through the gulf ports, no other course seemed to be left open than a reduction to meet the situation, and the lower rate will accordingly take effect on October 1. The prevalent opinion in railroad circles seems to be that the step in question was taken none too soon, in view of the heavy diversion of business to the gulf ports, which of course means a loss to the Chicago roads and the trunk lines as well. Whether, however, this would have been done unless the competition of the lake lines had forced it, it may be doubted.

As to the effort to get the managers of the roads west of Chicago together and to formulate an agreement for their territory, which in spirit and substance will correspond with the Joint Traffic Association of the trunk lines, there is more or less difference of opinion. The matter is summed up very ably by a western railroad official, who is reported as saying that the chief obstacle to perfecting such an organization at once is the difficulty in enforcing any agreement. The Interstate Commerce law forbids a pool, and anything like a penalty could not be legal. There is also some difficulty in getting boards of managers west of Chicago to act with the same harmony of spirit as the board east of Chicago. The roads cover widely different territory and conditions of business are different, but more important is the fact that the managers still lack that spirit of conciliation and concession so remarkable in the trunk lines. The fact is that the trunk lines became so much impoverished by their rate wars and gradually drifted into relatively few hands that ownership made a combination possible. West of Chicago the experience of the war has not yet been sufficiently telling to make the managers willing to sacrifice almost anything for peace, and the ownership of the roads is not so concentrated. In the fight for business the north and south lines west of the river are getting the best of it, as shown by the recent earnings of the Missouri, Kansas & Texas and Atchison companies, as compared with those of the St. Paul and Burlington.

IMPORTERS' RIGHT TO ABANDON APPEALS.

A decision of importance to importers has recently been rendered by the Circuit Court of Appeals and has not been appealed by the Treasury Department. This decision involves the right of importers to abandon appeals. The case in which it was rendered arose as follows: A certain importation of leaf tobacco was classified for duty by the collector at the port of New York—certain portions at 75c. per pound, and certain other portions at 25c. per pound. The importers, being dissatisfied with the decision, in due time gave notice to the collector setting forth their objections. The collector transmitted the invoice and the papers and exhibits connected therewith to the Board of General Appraisers, which affirmed the decision of the collector, except in one particular, in which it sustained the contention of the importers. The importers thereupon applied to the Circuit Court for a review of the questions of law and fact involved in the decision, and filed the statement of errors required by the law. Before the case came on for a hearing the importers learned of a decision of the Federal Supreme Court which convinced them that they had no chance of success. When the case was called they conceded in open court that there was no error in the decision of the Board of General Appraisers, and the court adjudged that the decision of the Board of General Appraisers should be in all things affirmed. The district attorney, on behalf of the United States, insisted in the Circuit Court that that court should review the decision of the board as far as it was favorable to the importers. This the court refused to do, and the United States appealed from the decision.

The Circuit Court of Appeals held that the Circuit Court was clearly right. It pointed out that section 14 of the Customs Administrative act of June 10, 1890, provides that the decision of the Board of General Appraisers "shall be final and conclusive upon all persons interested, and the record shall be transmitted to the proper collector, * * * who shall liquidate the entry accordingly, except in cases where an application shall be filed in the Circuit Court within the time and manner provided for in section 15 of this act," and that section 15 provides that "if the owner, importer, consignee or agent of imported merchandise, or the collector or the Secretary of the Treasury, shall be dissatisfied with the decision of the Board of General Appraisers, as provided for in section 14 of this act, as to the construction of the law and the facts respecting the classification of such merchandise and the rate of duty imposed thereon under such classification, they, or either of them, may within thirty days next after such decision, and not afterwards, apply to the Circuit Court * * * for a review of the questions of law and fact involved in such decision. Such application shall be made by filing in the office of the clerk of said Circuit Court a concise statement of the errors of law and fact complained of, and a copy of such statement shall be served on the collector or on the importer, owner, consignee or agent, as the case may be."

Continuing, the Appellate Court declared that any argument upon the question whether or not the Board of General Appraisers was a court, and whether Congress had power, under the Constitution, to clothe it with judicial powers, was irrelevant. Congress, the court said, had expressly provided, as it had the undoubted right to do, that the decision of the collector as to rate and amount of duties on imported merchandise should be final and conclusive, unless these questions were brought before the Board of General Appraisers in the manner provided in the act, and that the decision of the board should be final and conclusive except when application for a review was made to the Circuit Court in the manner provided in the act. Names, the court said, were nothing; it was immaterial whether the proceeding was called an appeal, or a review, or a transmission of the case; any person who was dissatisfied with a decision of the board must set forth his grounds of dissatisfaction and file the same in the Circuit Court, and might apply to that court for a review within thirty days next after such decision, and not afterwards. If he failed to apply for a review within the limited time his remedy in the Circuit Court was lost. The court distinguished the proceeding and the effect thereof from that allowed under the act of August 31, 1852, and

affirmed the decision of the Circuit Court. The effect of the decision appears to be that where a judgment has been rendered partly in favor of an importer and partly against him he can abandon an appeal, and the government cannot have the case reviewed further.

BANK CLEARINGS FOR SEPTEMBER.

September bank clearings reflect a little more activity in business and speculation than was noted in August, and the comparison made with the corresponding period a year ago is also better than that made by the preceding month. The total clearings at 67 cities for the month just closed aggregate $3,664,000,000, a gain over the August total of nearly 4 per cent., but a decrease from September a year ago of 11.4 per cent. The decrease in the August total this year from a year ago was more than 14 per cent. With the exception of August, however, the total of September clearings is the smallest reported in any month this year, and, in fact, is smaller than in any month since February, 1895. One year ago it will be recalled that September clearings increased 18 per cent. over those for September, 1894, which month, in turn, showed a gain of 5.3 per cent. over the total for September, 1893.

The following table of percentages of increase and decrease during the first nine months of the past four years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 6.3	Dec. 36.9	Dec. 2.7
Two months	Inc. 11.7	Inc. 7.4	Dec. 34.0	Inc. 1.2
March	Inc. 2.2	Inc. 7.4	Dec. 30.7	Inc. 2.1
Three months	Inc. 8.4	Inc. 7.4	Dec. 33.0	Inc. 1.4
April	Inc. .9	Inc. 14.2	Dec. 25.0	Dec. 3.0
Four months	Inc. 6.4	Inc. 9.1	Dec. 31.0	Inc. .5
May	Dec. 13.0	Inc. 25.0	Dec. 26.3	Inc. 4.6
Five months	Inc. 1.9	Inc. 12.5	Dec. 30.2	Inc. 1.2
June	Dec. 2.4	Inc. 22.4	Dec. 20.8	Dec. 8.1
Six months	Inc. 1.1	Inc. 16.5	Dec. 28.1	Dec. .2
July	Dec. 4.4	Inc. 29.8	Dec. 15.4	Dec. 10.5
Seven months	Inc. .3	Inc. 16.2	Dec. 27.2	Dec. 1.6
August	Dec. 14.2	Inc. 16.1	Inc. 5.9	Dec. 25.8
Eight months	Dec. 1.4	Inc. 16.2	Dec. 24.4	Dec. 4.2
September	Dec. 11.4	Inc. 18.4	Inc. 5.3	Dec. 30.7
Nine months	Dec. 2.5	Inc. 16.5	Dec. 22.4	Dec. 7.0

The showings made by the various groups of clearing-house cities during September and the first nine months of the year compare with preceding months as follows:

	June, 1896.	*July*, 1896.	*August*, 1896.	*Sept.*, 1896.	*Nine mos.* 1896.
New Engl'd.	Dec. 2.4	Dec. 10.2	Dec. 18.6	Dec. 10.7	Dec. 4.9
Middle	Dec. 3.2	Dec. 2.8	Dec. 14.9	Dec. 13.2	Dec. 2.5
Western	Dec. 4.4	Dec. 8.9	Dec. 13.2	Dec. 13.8	Dec. 4.9
Northwestern	Inc. 4.5	Dec. 4.2	Dec. 11.6	Dec. 10.2	Dec. .9
Southwestern	Dec. 7.2	Dec. 9.5	Dec. 9.9	Dec. 6.2	Dec. 5.7
Southern	Inc. .1	Dec. 1.6	Dec. 5.8	Inc. 9.7	Inc. 4.7
Far-western	Dec. 4.1	Dec. 7.7	Dec. 7.1	Dec. 3.7	Dec. .6
Totals	Dec. 2.4	Dec. 4.4	Dec. 14.2	Dec. 11.4	Dec. 2.5
Canada	Dec. 9.5	Dec. 4.4	Dec. 8.5	Inc. 2.6	Dec. 1.8

Only one group of American cities shows an increase in clearings over the September total a year ago, which is explained by the very heavy and exceptionally early movement of cotton to market. The gain of clearings in the southern group is fully 9.7 per cent. The group of Canadian cities also shows a gain, this one being 2.6 per cent. over a year ago. The groups showing heaviest decreases are the central western, 13.8 per cent., and the middle states group, 13.2 per cent. The smallest decrease is that reported by the group of far-western cities, 3.7 per cent.

Total clearings for the nine months at 67 cities aggregate $37,025,000,000, a decrease of 2.5 per cent. from the total a year ago, a gain of 13.5 over 1894, but a falling off of 11 per cent. from 1893.

In the nine months' comparison, also, the southern cities show the only increase, with a gain of 4.7 per cent. The southwestern group reports the heaviest decrease, a falling off of 5.7 per cent., the eastern and central western cities coming next with decreases of 4.9 per cent. each. Canadian cities show a falling off of only 1.8 per cent.

BANK CLEARINGS AT 88 CITIES FOR SEPTEMBER, AT 82 CITIES FOR THE MONTH AND FOR NINE MONTHS THIS YEAR AND LAST, AND AT 73 CITIES FOR FOUR YEARS.

NEW ENGLAND'S WOOLEN AND COTTON GOODS INDUSTRIES.

Boston, September 23.—That the wool market has experienced the full measure of the depression is now thought to be the case, as all appearances tend towards improvement. The market had gradually worked down until attention began to be attracted by English buyers, and this has apparently been sufficient to awaken interest here. Wool raised west of the Mississippi river is classed by the trade as "territory." This, of course, includes Texas and California grades. The "free wool" law passed under the Wilson bill induced American manufacturers to put out samples of goods containing large proportions of foreign wools, or, rather, they were forced to do this by the general call that prevailed at that time for foreign supplies. The result was that even when manufacturers were busy the use of our territory wools had been greatly lessened, for with samples sold and orders taken for goods made largely of foreign wools the same raw material had to be used in making up the goods. When the dull times came it resulted in a stock of territory wools on hand much in excess of the usual average, although the supply of all kinds was heavy.

The new clip opened firm in the country, expectation being that before long the duty on wool would be restored and that on woolens increased. This caused high prices at producing points, although the stock of seaboard territory wools carried over and held was larger than for many years. Some of the new wools were bought by eastern dealers at high prices, and more have been since shipped forward on commission. The free-silver scare checked any disposition to do business, and the summer passed with wool stocks increased instead of diminished. American woolen manufacturers could not get business and would not make up goods except on orders, hence machinery has lain idle.

While consumption of wool in Europe has been large, manufacturers on that side have had little experience with American wools, their previous high price having prevented exportation. On this account the only outlet for territory wool has been to the American manufacturer, who felt no uneasiness in seeing the price decline, as he counted on being the only buyer. But low prices during the depression awakened interest abroad, and during the past few months many sample lots of territory wools have been shipped to England in the hope of opening a trade with foreign manufacturers.

The result has been quite satisfactory, and English manufacturers have begun to test American wools, while a number of representatives of English mills have been over here of late prepared to make large purchases. They have bid low prices, to be sure, about 26c. scoured, with some good staple lots as high as 28@30c. landed in England, and while many millions of pounds of wool have been negotiated for by English buyers, not much more than a million pounds of territory grades have been reported sold as yet, although, except for the recent sharp advance in ocean freight rates, these sales would have been larger. Recent bids from England have been higher, but the difficulty is to get ocean room, and the consequent higher cost to lay the wools down in Bradford has prevented transactions.

However, the fact that the wool market on this side had got to such a low point in

the matter of price that an outlet for these wools, that were always considered specially for our manufacturers, had been found, began to awaken the latter to a sense of the situation, instead of waiting until the goods began to sell before they bought.

Manufacturers now conclude it safe to buy raw material before the best of it is exported, and the past few weeks have seen considerable activity in this respect.

The goods market continues slow and unsatisfactory. Manufacturers feel that they will need considerable wool before the next clip comes in, and that there is little prospect of as low prices in the near future. The result is a complete change for the better, and, with the increase of sales, holders who a few weeks ago were anxious to sell, at no matter what price, will not concede ½c. on lots equal to a half million pounds. The high rates asked for money and the difficulty in securing it have operated against wool purchases to a considerable extent, and as yet it has been mostly the larger manufacturers who have been able to purchase round lots at the bottom rates. The market is already 2@3c. stronger on the scoured price for the better staple wools, and indications are that the advance will be carried higher. The smaller operators have not bought much as yet, and even larger manufacturers have not nearly as much wool as they are in the habit of carrying under normal conditions.

With the goods market showing improvement and machinery starting to work, so that consumption of wool is up to the normal, it looks as though the price of territory would advance to the point it reached before the depression, which would be at about 35c. for scoured, fine medium and fine. With money easier and a good prospect of trade at the mills, buyers will feel more inclined to take the raw material on hand, and indications, therefore, favor a further advance in prices. Fleece wools have not been in such excess of stock as has been the case with territory grades. These wools have improved in tone and are quoted about 1c. higher, finer grades being in short supply.

The cotton goods situation is not very favorable, although, through the aid of curtailed production and cut prices, the large supplies of manufactured goods that had been accumulated by the mills have been worked out of the way. The prospect of a great decrease in the cotton crop has again forced the price of raw cotton far above the parity of goods, and this has induced manufacturers to advance prices for products. While at the cut prices of the past few months buyers have recently shown a disposition to purchase, they have not followed the advance with much eagerness. In fact, the higher prices, although by no means sufficient to cover cost of production, have been sufficient to check demand. The fact that raw cotton has recently shown more weakness, although costing above a parity with goods, has made the business quieter by encouraging buyers to wait. Many mills that have been idle during the past two months have made preparations to start up, but it looks as though, in order to get the market on a profitable basis, a still greater scarcity of goods will have to be felt. The surplus has disappeared from first hands to a great extent, but it has not gone into consumption. It is held by jobbers at low prices, and it will be difficult to force them to buy very freely of higher cost stuffs until a large share of the cheap goods has been disposed of. Owing to the dull times it has been much slower work than expected to strengthen the market by curtailing production, and it looks as though a general starting up of machinery now will make it impossible to sustain an advance in the price of goods, as it will cause the accumulation of another surplus at first hands. With an increase in the consumptive demand sufficient to absorb the cheap cost goods now held by the trade, buyers would be forced to purchase, which would soon put trade on a solid basis. But as long as the present waiting attitude is indulged in the increase in production of cotton goods points to weakness of prices.

SPEAKER REED ON THE POLITICAL SITUATION.

"Practical and sensible politics are at all times very unsatisfactory to the voter. He has always to vote for many things about which he is indifferent, and for some things which are quite repugnant, in order to obtain the few things which he vehemently desires. It has always been so, and always will be so, for the difficulty arises out of the nature of things."

Such are the reflections with which one of the very ablest of American public men, Speaker Reed, begins an article in the current *North American Review*, and upon which he bases an earnest plea for the direct support of the candidate of the Republican party by Democrats who dissent from the declarations in the Chicago platform. The Speaker insists that from the very nature of things it must follow that men vote the way which, on the whole, they think wisest, and not often for what they entirely approve of. Only two alternatives, he says, are ever presented, and neither one entirely satisfies the judgment, yet the course taken must, on the whole, satisfy one's sense of public duty.

In applying these reflections to the existing political situation Mr. Reed points out that the introduction of the silver question into national politics has completely disorganized the Democratic party. The lines of cleavage really existed during the first term of President Cleveland, and those who stood with him can have no fellowship with Mr. Bryan. What. he asks, ought that portion of the Democratic party to do? He suggests that, in common with others, they ought to vote for Mr. McKinley because he represents some important things which coincide with their own wishes. It may be true, he says, that Mr. McKinley represents some other notions to which they are not friendly, but such is the case continually in politics. Such Democrats are sure that no greater misfortune can happen to the business interests of the nation than sinking to the level of the silver standard, forsaking the civilized nations and joining, so far as currency goes, those not so far advanced as we ourselves are. Then the consideration should be very powerful with such men that the larger the victory over Mr. Bryan and the more signal their defeat the surer our reëstablishment in our own confidence and in the confidence of the world. The voting the third ticket will be, he suggests, rather a personal gratification than the full performance of a public duty. As regards the criticism of the personality of Mr. McKinley on one ground and another by those who think that Bryan ought to be defeated, the Speaker says that if anybody waits for a candidate who perfectly suits him, he is likely not to vote until he is nominated himself, and even then, if he has good sense, he will have doubts.

Speaker Reed devotes some space in his article to a discussion of the question to be settled at the coming election, going over some ground which has been rendered familiar in the debate on the issue that has been going on for some time. He points out that the word free, used in connection with silver, has, by itself, a great charm for the people of the United States, and for that reason the phrase "free silver" is in the nature of a seduction and an allurement. There can be no doubt that the silver men have attracted some votes by the use of this phrase as a shibboleth, and it is as well for those who are opposed to the policy proposed by Mr. Bryan not to allow any sense of overconfidence to cause them to relax their efforts in any direction. It can do no harm in an electoral contest to credit one's opponent with greater strength than he really possesses; the danger to be avoided lies rather in the other direction.

LOCATION OF THE ALASKAN GOLD FIELDS.

Much interest has naturally been manifested in the question as to the light thrown by the recent surveys in Alaska upon the location of the Alaskan gold fields. In a recently published statement General Duffield, the superintendent of the Coast and Geodetic Survey, expresses the opinion that the gold fields in question are located on the American side of the 141st meridian. According to General Duffield, the question as to the exact determination of the boundary line of British Columbia is now pretty well settled, and all doubt caused by references to "mountain chains" or "ranges" near the coast, along the "Panhandle," has been disposed of, as it has been found that there are only two groups of elevations that can be even remotely considered as mountain chains, the one being the Mount St. Elias chain, the other the Treadwell chain. The first is conceded to be on British soil, while the latter cannot be brought into the discussion with any dignity, as it is simply a group of peaks. The determination of the boundary line thus resolves itself into the location of a line ten marine leagues from the coast, and the determination of the line of the 141st meridian of longitude.

It is known that the maps prepared by the joint commission named by the United States and the United Kingdom to explore the country are now in the hands of the two governments, and it is understood that negotiations are about completed looking to the selection of a joint commission to strike the line between the two countries from the maps submitted. The commission named to prepare the maps, it appears, went into the field in each case so divided that each American party had a British representative, while an American was present in each British surveying party to look after the interests of this country. As a result, General Duffield says absolute fairness was secured, and the cartographical results can be depended upon for accuracy.

In determining the 141st meridian of longitude the notes of the British surveyor, Ogilvie, six years in preparation, have been compared with those of the American surveyors, and have been found to vary so little that no trouble will be found in striking a compromise between the two lines. At some points these lines are only six feet apart, while at the greatest divergence they are within 400 feet of each other.

As regards the difficulty encountered in locating the great peak of Mount Elias, it arises, General Duffield says, from the fact that it was possible by the terms of the treaty to locate it just over the line in the British dominion, if its location were decided by the meridian, while the ten leagues from the coast line bring it just inside the American possessions. This uncertainty arose from the junction of the meridian line with the other line of boundary following the coast. It will, General Duffield thinks, be decided to consider Mount St. Elias the terminal of the coast line from the head of Portland Canal, although it is five minutes east of the meridian, and thus in British territory. The gold thus far found is declared to be all west of the meridian line, and so far none has been discovered in the possessions of her British majesty. The placer mining is all done along the head waters of Birch creek, Forty-mile creek and Sixty-mile creek. Birch creek is, the Coast Survey superintendent judges from his observations, wholly west of the line. Forty-mile creek crosses the line into British territory before emptying into the Yukon, as do also the western head waters of Sixty-mile creek, but no gold has been found in either stream on the British side of the line, all operations being confined to the fields near the sources of these creeks.

A PLAN OF UNIVERSAL BIMETALLISM.

Nearly four years ago Mr. R. P. Rothwell published in the *Engineering and Mining Journal*, of which he is the editor, some suggestions for a system of universal bimetallism under the control of an international monetary clearing house. The plan suggested by him has, in the interval, formed the subject of several papers read by him before bodies interested in it, and of a number of editorials in the journal conducted by him, and the substance of these papers and editorials has now been embodied by him in a pamphlet, in which he has included a considerable amount of statistical information compiled both by himself and by others. The prominence of the monetary issue in the pending campaign has prompted the publication of the pamphlet, which constitutes an interesting contribution to the literature of the campaign.

The author suggests that the silver question be submitted to the arbitrament of an international monetary clearing house or commission, to be composed of expert representatives of the nations, empowered to select a universal monetary standard, to adopt measures for securing the use of gold and silver at such a flexible ratio as will effect permanent stability in the value of the world's money, and to adopt measures for facilitating international monetary transactions, and for their supervision and control. Some of the measures which, in the author's opinion, would best aid in attaining the objects of the clearing house are suggested by him. These contemplate, in the first place, the ascertaining the amount of money—gold, silver and uncovered notes—held by each country, the use of these amounts as the basis for the proportions in which the several nations would join in the purchase for gold of the amount of the silver of the silver-basis countries necessary to put each on the bimetallic basis, and also as the basis of the proportions in which the nations would join in the subsequent purchase of all the gold and silver offered each year in excess of that specifically applied for.

The clearing house would, furthermore, be authorized to issue for the gold and silver

so purchased international certificates redeemable in gold and silver at holder's option, or, possibly, in gold and silver in specified proportions; to determine from time to time what change in the value ratio of gold and silver would be called for by the changed conditions of production; to clear every national transaction in the purchase, sale and emission of money, and to publish frequently reports of its transactions. Under the plan proposed the clearing house would act through the customary channels—the mints of the several countries—and, while establishing a standard and regulating the value ratio of gold and silver, would not necessarily interfere with the coinage of the nations beyond regulating the relative values of the metals employed in it. The idea of the author is that the clearing house would, through the means indicated, prevent any sudden fluctuations in the value of the money of the world, while not preventing a natural and gradual evolution towards a single standard for unlimited legal-tender money should such become desirable. The statistical and other information contained in the volume are in large part from official sources.

LOUISVILLE AND CINCINNATI AND THE BALTIC TRADE.

The following from Mr. Charles E. Currie, of Louisville, whose interesting letter on trade between the United States and the Baltic countries appeared in BRADSTREET'S of September 19, will be found of special interest to those trading with the north of Europe, or contemplating engaging in such trade.

To the Editor of BRADSTREET'S:

SIR—I have recently been appointed Danish vice-consul for this territory. This is one of the results of my trip to Denmark as special commissioner of the Louisville Board of Trade. The object was for me to investigate conditions of trade as they exist in the Baltic countries, and report upon the possibilities of American goods sold in those markets. In order to demonstrate the matter more clearly I was given the samples and prices of products of seven leading manufacturers in Louisville, the idea being to present the goods and thus determine practically whether or not the goods are salable, and if not to ascertain the reasons. Of the seven lines sent over five found a market. The only objection urged to the American goods is that American patterns do not conform to those of goods in use in those countries.

My appointment as vice-consul was made purely on commercial grounds, to enable me to carry out the line of work I have undertaken under favorable circumstances. A significant feature of the appointment is that with the appointment a special dispensation has been made from the fixed rules governing a Danish consular service, in that I will be privileged to make my reports direct to the Danish government at Copenhagen instead of through the consul at either Chicago or New York, as is the custom otherwise. This feature of the appointment is significant, and demonstrates the interest the Danish government takes in the matter of encouraging American imports into Denmark, as well as into all countries on the Baltic. The idea is not to solicit trade for Denmark alone, but to give Americans the advantage of the entire Baltic trade, in which territory there are some forty or fifty millions of consumers. I have taken the initiative in this, and I have been extended special favors and privileges. It was through my instrumentality that Consul T. Soegaard (who had been sent by the Danish State Department to this country for the purpose of interesting Americans in Baltic trade) was brought to Louisville, and it was upon letters of introduction which I furnished him that he was introduced into commercial circles at Cincinnati. A number of Cincinnati manufacturers have become interested in the Baltic trade and no doubt will soon be shipping to those countries.

As the Danish government in making me vice-consul intends placing in my hands all affairs pertaining to commerce throughout the Mississippi valley, I think it would be of general interest if you would publish an article covering the points of this letter, and you are at liberty to state that it is my desire to correspond with any manufacturers who may feel interested in export trade in the Baltic. The correspondence will have my prompt attention, and if I have not the information at hand which they may desire I am always in a position to secure it for them, and I feel there is no doubt many of the manufacturers of this territory can be benfited largely.

I will say in conclusion that I have taken up this work purely as a matter of public spirit, and without the expectation of remuneration from any one.

CHARLES E. CURRIE.

Louisville, Ky.

SPAIN'S FINANCIAL TROUBLES.

Enormous as are the physical difficulties of climate and distance which Spain encounters in waging its struggle to retain possession of Cuba, they are even of less consequence than the financial embarrassments which this war has created. The latter have, indeed, reached a stage which would seem to render a termination of the hopeless struggle inevitable. The tenor of advices from Madrid would, indeed, indicate that this fact is recognized by the governing classes, and that it is only the tenacity with which the Spanish people cling to the possession of the so-called Ever Faithful Island, and the certainty that propositions to abandon it would precipitate revolution, probably a dynastic change, which prevents such a step. The revenues of the country for years past have not covered the ordinary expenditure. The notes of the Bank of Spain, which furnish the sole circulating medium, are supported by a manifestly inadequate gold reserve, metallic payments have been suspended long ago, and the average gold premium for some time past has been about 20 per cent., while the resources of the National Bank have been absorbed by the constant demands of the government. The revolt in the Philippine Islands adds another chapter to the miseries of the Spanish government and people, involves further large expenditures which the nation is unprepared to make, and forces the financial problem to the front as the deciding matter in Spain's contest for the retention of the remnants of its once splendid colonial empire.

Since the beginning of the Cuban revolt the Spanish treasury has met the expenses, in part, by a number of expedients, including a pledge of its interest in the quicksilver mines of the peninsula and a new arrangement with the Tobacco Monopoly Company. Even these doubtful aids would not go far toward meeting the cost of the army and the new warships which the government has felt obliged to order. A final and desperate effort is now on foot to secure $200,000,000, or 1,000,000,000 pesetas. Reports have been current that the negotiations have failed at the outset, and though this is unconfirmed there is nothing improbable in it, as the plan adopted involves an extension of the concessions to the Spanish railroads, in return for which the foreign owners of these properties and their financial backers shall provide the amount required by the government.

The Spanish railways were built with French capital. The leading lines comprise 4,700 miles, and among the leading Parisian financial interests which are prominent in their control are the Rothschilds. The capital was mainly supplied by the issue of 3 per cent. bonds, redeemable at par within periods ranging from seventy-five to ninety years, according to the life of the concessions on which the railroads were constructed. As the railroads' revenues are paid in depreciated bank notes there is an enormous loss in exchange, and the government, which controls rates absolutely, has refused to permit any advance in them. Dividends on the railroad shares were long ago passed, and some of the companies pay the maturing coupons in Spanish exchange, which means a loss of 20 per cent. or so in interest to the bondholders. The companies, therefore, asked for an extension of the concessions in order to secure a proportionate delay in the period in which the bonds are to be retired and a corresponding lightening of their burdens.

The government's financial project, which was authorized by the Cortes before its recent adjournment, is an attempt to take advantage of this desire on the part of the railways. It authorizes the ministry to extend the concessions till 1980, on condition that the railroad companies secure the floating of bonds sufficient to produce 1,000,000,000 pesetas net, of which 100,000,000 or 200,000,000, if possible, shall be in gold. About six months are given for the railways to give their adhesion to the project, which, according to all advices, has not been received with favor at Paris, where, as already stated, the obligations of the Spanish railroad companies are almost exclusively held. The securities of the companies are already very much depreciated, the 3 per cent. bonds of the Saragosa Company, in which the Rothschilds are largely interested, being quoted at 61, while the similar obligations of the North of Spain Company sell for 47. It is estimated that at the present stage of Spanish credit it would be necessary to issue 4 per cent. bonds to the extent of 1,650,000,000 pesetas in order to yield the 1,000,000,000 pesetas, or $200,000,000, required by the government, a figure which, in the present stage of Spain's political and financial troubles, seems entirely too large for the companies to add to their other burdens.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

[East of Rocky Mountains.]

The Paris correspondent of Berlin *Boersen Courier* gives the following estimates of the distribution of gold and silver in the principal banks of the world:

	Gold.	*Silver.*
Bank of France	$408,200,000	$225,020,000
German Reichsbank	145,200,000	70,000,000
Other German banks	19,400,000	1,000,000
German imp. war fund	30,000,000	....
Bank of England	234,400,000	8,000,000
Other English banks	40,000,000	....
Scotch banks	21,800,000	4,000,000
Irish banks	14,600,000	2,000,000
Austro-Hungarian Bank	114,400,000	54,000,000
Austro-Hungarian treasury	81,400,000	....
Bank of Italy	60,600,000	11,000,000
Bank of Naples	21,200,000	2,200,000
Bank of Sicily	7,000,000	400,000
Treasury of Italy	17,400,000	2,200,000
National Bank of Belgium	16,600,000	2,600,000
National Bank of Greece	400,000	....
National Bank of Roumania	11,800,000	1,000,000
Bank of Spain	42,000,000	56,800,000
Bank of Holland	13,200,000	35,400,000
Bank of Algiers	3,200,000	3,200,000
Bank of Portugal	5,400,000	9,400,000
Bank of Sweden	6,800,000	800,000
Bank of Norway	6,600,000	....
Bank of Denmark	18,600,000	....
Bank of Servia	1,200,000	1,000,000
Bank of Bulgaria	200,000	400,000
Bank of Finland	4,400,000	600,000
Swedish banks	2,200,000	800,000
Swiss banks	17,200,000	1,600,000
Bank of Russia	454,400,000	5,200,000
Imperial treasury of Russia	68,200,000	....
National banks of New York	62,000,000	....
Other national banks of United States	85,200,000	13,600,000
Treasury of United States	150,800,000	532,400,000
Australian banks	100,000,000	....
Totals	$2,291,400,000	$1,074,400,000

The correspondent directs attention to the great increase of gold during recent years. It stood on June 30, 1896, the date for which the estimate was made, at $2,291,400,000—the largest figure ever shown—an increase from $2,273,200,000 in April of this year; from $2,210,000,000 at the end of December, 1895; $2,115,800,000 at the end of 1894, and $1,565,400,000 at the end of 1890. In the past five and one-half years the increase in visible gold amounted, therefore, to not less than $726,000,000.

CURRENT BUSINESS NEWS.

Industrial.

The Waterbury Watch Company, at Waterbury, Conn., closed down for several months, resumed business this week.

The Goodall Worsted Mills, at Sanford, Me., will run on full time both night and day.

The York Mills, of Saco, Me., employing 1,600 operatives, and which have been idle since May, are to start up on full time October 5.

The Hamilton Woolen Mills, at Amesbury, Mass., employing 800 operatives, have started up after a shutdown of five weeks.

The Great Falls Manufacturing Company, at Somersworth, N. H., has announced a reduction of wages of about 8 per cent., to take effect October 12.

The mills of the Amoskeag Company, at Manchester, N. H., which employ 8,000 hands, who have been idle since August 8, has started up on full time.

The Otis Company's cloth mills at Ware, Mass., which have been running on half time for six months, have started up on full time, employing 1,800 hands.

The strike of 250 miners employed at the mines of the Missouri & Illinois Coal Company, at Rentchler, Wilderman and Freeberg, Ill., has been declared off. The company conceded the advance demanded.

The seventh convention and the first biennial session of the United Association of Plumbers, Gas and Steam Fitters of the United States was opened at Milwaukee this week. There were about fifty delegates present. The convention was called to order by President Moran, and was addressed by Mayor Rauschenberger. President Moran responded in behalf of the association. The sessions were to continue daily during the week.

A Montreal dispatch says that all the train dispatchers on the Canadian Pacific railway system are out on strike.

The committee of the Leadville, Col., miners has decided to continue the strike.

About one thousand operatives have returned to work to-day in the mills of the Boston Manufacturing Company at Waltham, Mass., and others will be taken in and given employment from time to time until the entire force will be at work again.

The Peabody Mills management, at Newburyport, Mass., has announced a 5 per cent. cut-down in wages.

Savannah turpentine manufacturers lost by the recent storm." Many of the trees are down, and it is impossible in many places to ride through the woods even on horseback."

The Chattanooga *Tradesman* says: "Southern iron is up 50c. on most grades, and southern No. 2 is quoted at 65c. Sellers are refusing to take orders for delivery after January 1 at present prices, and some companies are even withdrawing, temporarily, from the market. The starting up of iron mills and furnaces is conspicuous, but makers seem, in some instances, to be anticipating the demand."

The Cleveland (Ohio) Rolling Mill, "one of the three largest plants of its kind in the United States, has closed down, and 4,600 men are thrown out of employment."

A meeting of the National Cut and Wire Nail Manufacturers' Association was held at New York this week. About twenty firms in the eastern, middle and southern states were represented. The cut-nail section of the association decided to maintain the prices and output at the present figures until November 1 next. The members of the cut-nail section were practically unanimous in resolving to make no changes at present. The wire-nail men adopted the same policy. Both sections adjourned to meet again in the latter part of October at the call of the chair.

The *American Manufacturer* says: "Three-quarters of 1896 have gone without making any great change in the local iron and steel market. At the end of each quarter we gave an account of the general condition of trade, with the prices which ruled in the principal lines, hence it is not necessary at this time to go into an extended review of the year. But at the close of nine months of 1896 we find that prices generally present few material changes from those recorded at the opening of the year. In crude material some few advances have been made, at the same time some lines are lower than they were, but in finished iron and steel products the few changes made were in the direction of lower figures.

Commercial.

The manager of the Manchester Ship Canal returned home Wednesday, after a six weeks' stay here. His object was to secure direct shipments to Manchester, and in an interview with a representative of the *Commercial Bulletin* he stated his trip had been successful. He pointed out the advantages of the canal to transportation agents and merchants in all the Atlantic ports and in the large western cities, and has secured a number of contracts, from which he believes the canal will ultimately receive benefit. He has also made arrangements for two, and possibly three, lines of freight steamers from Atlantic ports to Manchester. The trip here included Boston, Montreal, Ottawa, Toronto, Detroit, Chicago, St. Louis, St. Paul, Minneapolis, Duluth, Kansas City, Cincinnati, Charleston, Norfolk, Newport News, Baltimore and Philadelphia, beside New York.

The thirteenth annual convention of the National Association of Booksellers, Newsdealers and Stationers is to be held in Boston October 6. The questions to be considered are an alliance of publishers for mutual advantage; measures for meeting the competition of department stores; the organization of the trade in the United States and Canada; the devising of methods to change the present unjust postal laws, and a plan to help the trade to deal direct with the publisher and protect both.

The Philadelphia *Ledger* states, apropos of the purchase of the Hilton-Hughes stock and business at New York by John Wanamaker of Philadelphia, "that goods purchased in one city will be delivered in the other just as if purchased there." This gives one a realizing sense of how distance is being annihilated by modern methods. "Talking between places a hundred miles or more apart by means of the long-distance telephone is no longer a novelty. Travel between Philadelphia and New York long ago became as familiar and required as little preparation as a ride in a street car, but it is something new to have the daily delivery system extended a hundred miles, so that a pair of gloves purchased at Thirteenth and Chestnut streets, Philadelphia, may be delivered in Harlem as readily as in West Philadelphia."

Wheat stocks at St. Louis in private elevators October 1 amounted to 810,000 bushels.

The New York Consolidated Ice Company, it is said, may now have an opponent worthy of its steel. According to a report the Standard Oil Company is going into ice, and will deal exclusively in artificial ice. "Plants are to be erected in New York and Brooklyn during the winter, to be ready for business in the spring."

The London *Statist* says: "The United States is the only source of (wheat) supply holding its own, and apparently the future course of prices in Mark Lane depends more on the States than on any other producer."

The Hungarian minister estimates the world's rye crop at 1,210,000,000 bushels, against 1,360,000,000 bushels last year.

Galveston is congratulating herself, and with reason, over the departure of the steamer Lambert's Point, drawing 23½ feet of water, and the pilot says that there was never less than one foot of water under her keel. The Lambert's Point carries to Bremen and Hamburg 5,650 bales of cotton, a large quantity of cottonseed meal and cottonseed cake, pine timber, cedar logs and 40,000 bushels of wheat.

The Maritime Canal Company has been authorized by the Massachusetts railroad commissioners and harbor and land commissioners to issue from time to time the $6,000,000 of stock and $6,000,000 of bonds provided by act of the General Court. This approval was granted, and the canal company is now in a fair way to realize the dream of several legislatures—a Cape Cod ship canal.

Financial.

According to cable advices the "proprietors of the London *Statist* announce that, being profoundly impressed with the gravity of the situation in the United States, they have requested one of their editors to visit the United States and examine the position on the spot."

The New York & New Jersey Telephone Company has declared a quarterly dividend of 1½ per cent., payable October 15.

The directors of the Minnesota Iron Company have decided not to pay the dividend of 1½ per cent. due October 15, owing to the unsettled condition of business. An official of the company states that the dividend for the entire year has been fully earned, but the board deemed it advisable not to make any disbursements until business revives.

The Rhode Island Senate has "passed a resolution authorizing the payment of all the obligations of the state in gold coin. As the treasury is empty, notes are to be issued for $250,000."

The American Tobacco Company has declared a quarterly dividend of 2 per cent. on its preferred stock, and the interest, amounting to 3 per cent., on its common stock scrip, both payable November 2.

The price of wheat is still rising in defiance to the theory that the advance in the price of gold is making it lower all the time.

New York Daily Stockholder presents following table of dividend disbursements for October for past four years:

	1896.	1895.	1894.	1893.
Bonds	$809,903,588	$706,294,651	$698,174,251	$824,969,101
Interest	20,959,074	18,546,946	18,542,591	20,953,453
Stocks	772,168,946	699,872,335	686,080,735	693,295,535
Dividends	14,024,029	13,368,762	13,740,713	13,517,173
Total dis.	35,883,103	31,915,708	32,283,304	34,470,626

Government interest and disbursements by banks, insurance companies, etc., will bring total up to nearly $45,000,000.

The following annual meetings are announced:

Alabama Great Southern	Oct. 7
Central Vermont	Oct. 20
Chesapeake & Ohio	Oct. 20
Fitchburg	Sept. 30
Lake Erie & Western	Oct. 7
Louisville & Nashville	Oct. 7
Minneapolis & St. Louis	Oct. 6
New York, Ontario & Western	Sept. 30
Northern Pacific	Oct. 19
St. Louis, Alton & Terre Haute	Oct. 21
St. Louis Southwestern	Oct. 6
St. Paul & Duluth	Oct. 8
Western Union Telegraph Co	Oct. 14

The following securities were sold at auction this week at New York:

25	Shares German-American Bank	107
26	Shares Broadway Insurance Company	108
20	Shares Nassau Trust Company of Brooklyn	128
$2,000	Lehigh & Wilkesbarre Coal Company consolidated 7 per cent.	102⅝
$4,000	Chicago & Eastern Illinois general consolidated 5 per cent.	96⅛
10	Shares Chicago & Northwestern preferred	142½
30	Shares Home Insurance Company	156¼
54	Shares Wagner Palace Car Company	143
3,475	Shares Dade Coal Company; 1,975 shares Castle Rock Coal Company, Georgia; 1,975 shares Walker Iron & Coal Company; 575 shares Chattanooga Iron Company; 1,975 shares Georgia Iron & Coal Company; 475 shares Bartow Iron & Manganese Co.	$10,000

From 1873 to 1895 the price of No. 1 anthracite foundry pig iron declined over 69 per cent.; best refined bar iron, over 62 per cent.; steel rails, over 79 per cent., and silver, per fine ounce, 50 per cent. From 1873 to 1894 the price of Cleveland pig iron declined over 68 per cent.; west coast Bessemer pig iron, over 73 per cent., and pig iron of all kinds exported from Great Britain almost 63 per cent. From 1873 to 1895 the reduction in the freight on wheat from Chicago to New York by lake and canal was over 78 per cent.; by lake and rail, over 74 per cent., and by rail, over 63 per cent. "The foregoing tables prove conclusively that prices of iron and steel at home and abroad, and rates of transportation on wheat from Chicago to the seaboard, have declined more rapidly since 1873 than the price of silver." * * * "That the alleged demonetization here brought down the price of pig iron in Great Britain is a proposition too palpably absurd to merit serious consideration."

The correspondent of the Philadelphia *Ledger* writes to that journal: "Bryan says that the fight for free silver is a struggle for national independence from the domination of the British money power, and yet it is probable that there would be no greater gainers by the triumph of free silver than certain English capitalists. The appeal made to silver mine owners by the secretary of the Bimetallic League is an admission that free silver would give the mine owners a profit of 64c. an ounce on their entire product. Edward Atkinson, in a recent number of BRADSTREET'S, showed that the three greatest silver mines in the world, producing a large share of the earth's yearly product, are controlled by British capital. In this connection, the report that the Rothschilds have purchased a one-half interest in the famous Anaconda mine is of significance. Yet Bryan would have us believe that the Rothschilds are the head and front of a conspiracy to force gold upon this country."

Railroads.

The Long Island Railroad Company reports for the year ending June 30:

	1896.	1895.	Changes.
Gross earnings	$3,952,799	$4,004,019	Dec. $51,220
Operating expenses	2,541,636	2,593,324	Dec. 51,688
Net earnings	$1,421,163	$1,420,695	Inc. $468
Other income	477,420	498,089	Dec. 20,669
Total	$1,898,583	$1,918,784	Dec. $20,201
Charges	1,468,700	1,414,631	Inc. 54,069
Balance	$429,883	$504,153	Dec. $74,270
Dividends	480,000	480,000	----
Deficit	$50,117	Sur. $24,153	Inc. $74,270

The Cleveland, Lorain & Wheeling Railway Company reports for the year ended June 30:

	1896.	1895.	Changes.
Gross earnings	$1,586,917	$1,360,464	Inc. $226,453
Operating expenses	1,109,014	927,263	Inc. 181,751
Net earnings	$477,903	$433,201	Inc. $44,702

The annual report of Toledo, Peoria & Western for the year ended June 30 is as follows:

	1896.	1895.	Changes.
Gross	$1,010,269	$953,238	Inc. $57,031
Operating expenses	739,481	782,143	Inc. 7,338
Net	$220,788	$171,094	Inc. $49,694
Charges	211,700	202,490	Inc. 9,210
Surplus	$9,089	Def. $31,396	$40,484

The Peoria & Eastern reports for the year ending June 30, 1896, as follows:

	1896.	1895.	Inc.	Dec.
Gross	$1,902,325	$1,811,740	$90,585	----
Net	457,900	463,938	....	$6,038
Surplus after charges	16,280	22,318	....	6,038

The Lake & Western reports for the fiscal year ending 30:

	1896.	1895.	Inc.	Dec.
Gross	$3,543,068	$3,517,780	$25,228	....
Net	1,613,129	1,584,452	28,677	....
Balance after charges	909,587	892,543	17,044	....
Surplus after dividend	317,587	300,543	17,044	....

The report of the Evansville & Terre Haute Railroad for year ending June 30, 1896, compares:

	1896.	1895.	1894.	1893.
Gross	$1,122,797	$1,038,273	$1,159,936	$1,285,672
Operating expenses	642,441	587,167	644,520	638,064
Net	480,355	451,085	515,416	646,708
Other income	15,103	13,170	13,158	46,651
Total net	495,458	464,255	528,574	693,359
Charges	384,693	385,121	399,148	334,287
Surplus	110,765	79,133	129,426	59,072

The Iowa Central Railroad Company reports for the year ending June 30:

	1896.	1895.	Changes.
Gross earnings	$1,854,043	$1,583,971	Inc. $270,072
Operating expenses	1,159,452	1,048,821	Inc. 110,631
Net earnings	$694,591	$535,150	Inc. $159,441
Fixed charges	436,049	440,313	Dec. 4,264
Balance	$258,542	$94,837	Inc. $163,705
Improvements	80,221	24,875	Inc. 55,346
Surplus	$178,321	$69,962	Inc. $108,359

Gross and net earnings for August are as follows:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.

Decrease in net earnings			8.0 per cent.	

East-bound trunk-line shipments from Chicago last week were 61,880 tons, against 63,387 the previous week and 62,024 last year. Michigan Central led with 8,050 tons. Other lines carried: Wabash, 8,010; Lake Shore, 7,150; Fort Wayne, 5,889; "Panhandle," 7,182; Baltimore & Ohio, 5,216; Grand Trunk, 5,566; "Nickel Plate," 7,294; Erie, 5,621; "Big Four," 1,902. Lake tonnage, 62,566.

Miscellaneous.

The London *Times* says: "A new United States revenue cutter, the Walter Q. Gresham, was launched at Cleveland, Ohio, on Saturday. British naval experts hold that she is a warship, and that her maintenance on Lake Erie will therefore be a violation of the treaty by which Great Britain and the United States agreed to maintain on the lakes only one war vessel each."

The United States minister at Buenos Ayres "has signed a treaty of extradition between Argentina and the United States. The treaty will be submitted to the present Congress for ratification. The treaty is the third that has been negotiated between the two countries."

President Cleveland is expected to formally open the Commercial Museum in the old Pennsylvania building at Philadelphia about December 1.

The hurricane which struck Savannah, Ga., on Tuesday did a great deal of damage, and the property loss will go above $1,000,000. Many lives are reported lost. In Brunswick the damage to property was placed at $500,000. In Washington the destruction of public and private property was estimated at $500,000. In Baltimore much damage was sustained along the water front.

Foreign.

The Hercules Cotton Mills, of Queretaro, Mexico, employing 1,600 hands, have closed down indefinitely.

A combination of British coal operators "has been effected, with the object of limiting the output."

In reference to the reduction of the dock charges at Liverpool, the charge for wheat is announced to have "been reduced from 1s. 4d. per ton to 1s. per ton, and on cotton from 3s. to 2s."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Taxes—Possession—Prescription.

The Supreme Court of Louisiana held, in the recent case of Chamberlain et al. vs. Abadie, that the payment of taxes on property is not of itself evidence of corporeal possession of the property, and without some act showing corporeal possession will not support the plea of ten years' prescription.

Railroad—Fare—Rare Coin.

The Georgia Supreme Court held, in a recent case, that a genuine silver coin of the United States, distinguished as such, though somewhat rare and differing in appearance from other coins of this government of like denomination and of later dates, is nevertheless a legal tender for car fare, and a passenger ejected for refusal to make payment otherwise than by tendering such a coin is entitled to an action for damages, and that the fact that the conductor declined to receive a coin of this character because he in good faith believed it was a counterfeit would not relieve the railroad company from liability.

Partnership—Liability—Representations.

The Supreme Court of Georgia held, in the recent case of Carlton vs. Grissom et al., that where an action was instituted against two persons upon a joint liability, the declaration to some extent indicating that such liability was that of a partnership, it was competent thereafter to amend the declaration by more distinctly alleging that the liability sued upon was incurred by the defendants as partners in the prosecution of a partnership business, and that though one may not actually be the partner of another person, he may nevertheless become liable as such partner if he represent to persons dealing with himself and such other person that they are partners, and upon the faith of such representation a credit is extended to the supposed partnership of which he represents himself to be a member.

Corporation—Stock—Note—Payment.

The Kentucky Court of Appeals held, in the recent case of Meguiar vs. Walsh, that where the incorporators and managers of a woolen mill company executed their joint note in bank to raise money for the company, which had exceeded the limit of corporate indebtedness allowed under its charter, and as indemnity the signers of the note had a large quantity of wool set apart to themselves in the rooms of the mill, the title to this wool must be regarded as still in the corporation; that one of the signers of the note having subsequently sold his stock in the corporation to one of his coöbligers, that sale carried with it practically the property charged specifically with the payment of the note, and that the purchaser with knowledge of that fact must look to the property he bought to pay the debt, and not to his vendor, and, having paid the debt, he cannot look to his vendor for contribution.

Corporation—Sale—Ultra Vires.

The Supreme Court of Minnesota held, in the recent case of Erb vs. Yoerg, that where the vendor of goods sold on credit brought replevin for them on the claim that they were purchased by the vendee corporation when it was insolvent and knew it was, and that it purchased them with intent not to pay for them, and at the close of the trial the trial court, without objection or exception by either party, struck out all of the evidence of the insolvency of the vendee and found for defendant, the remaining evidence would sustain no other finding. The court held that even though the purchase by the vendee corporation was ultra vires, it was estopped after it had received the goods from denying its liability to pay for them, and the vendee could not afterward rescind the sale by reason of the ultra vires character of the contract, and that even though a certain statute made the entering into such an ultra vires contract punishable as a crime (which was not decided), it would not be a ground for the rescission of such a completed sale.

Insurance—Forfeiture—Liability—Notice.

The Supreme Court of Indiana held, in the recent case of Peelle vs. Provident Fund Society et al., that the courts do not favor forfeitures of insurance policies for non-compliance with the strict letter of conditions to be performed by the beneficiary after the loss has accrued, and that where the insurance company had actual knowledge of the death of the insured the next day after it occurred, and the beneficiary did not know the full particulars of such death for eleven days after it occurred, and within five days from that time sent to the insurance company a written notice of the time and manner of the death with an offer of full proof, the insurance company was not absolved from liability by reason of the beneficiary's failure to comply literally with a condition in the policy that "failure to give written notice within ten days from the date of either injury or death shall invalidate any and all claim under this certificate."

Note—Consideration—Estoppel.

The Supreme Court of Georgia held, in the recent case of Dodd vs. Mayfield, that where in a given transaction several promissory notes resting upon the same consideration were executed and passed by negotiation into the hands of different third persons, though in a suit instituted by a holder of one of these notes the maker defended by filing a plea of failure of consideration and his plea was found against him, he was not thereafter estopped by the judgment rendered in that case from filing a like defense to a similar action by a holder of another of such promissory notes, the court holding that estoppels by judgment, like estoppels in pais, must be mutual.

Insurance—Note—Premium.

The Supreme Court of Georgia held, in the recent case of The Mutual Life Insurance Company of New York vs. Smith, that where a promissory note was given for a premium on a policy of life insurance, and the person taking it executed and delivered to the maker a cotemporaneous agreement in writing "to renew said note, at the request of the maker, until three annual payments have been made," it was incumbent upon the maker, in order to obtain under this agreement the right to renew the note in question, to tender or pay in cash the next annual premium upon the policy when the same became due, the contract not contemplating that a promissory note would be accepted for such premium, and that it appearing from the evidence in the case that the defendant did not tender or make payment as above indicated, he did not show himself entitled to the privilege of renewing the note sued on, and this being so, he was liable thereon, and a verdict in his favor was not warranted.

Collision—Liability—Act of 1890.

A law passed by Congress in 1890 makes it the duty of colliding vessels to stand by each other and render assistance, and give their names in all cases where the circumstances are such as to render it proper and reasonable, and further provides that a failure to do this will render the offending vessel in fault as causing the collision, in the absence of proof to the contrary. This law recently came up for construction in the case of The Boston Towboat Company vs. Winslow et al., decided by the United States Circuit Court of Appeals for the First Circuit. It appears that a collision occurred between a schooner owned by appellees and two barges towed by a tugboat owned by the appellant; that both barges and the schooner were damaged; that the owners of one of the barges filed in New York a libel against both the schooner and tugboat; that the owners of the schooner libeled the tug in the district of Massachusetts, and that the owners of the tug filed a petition to limit their liability, while contending at the same time that the collision was due to the fault of those in charge of the schooner, and that the tugboat was not liable to either the owners of the schooner or the barge. It further appeared that the district court in Massachusetts entered a decree limiting the liability of the owners of the tugboat to the amount of value of the interest in the tug and in her freight money or towage then pending. The damages decreed to the barge and to the schooner did not together equal the value of the tug and her pending freight. From this decree the petitioners, the owners of the tugboat, as well as the owners of the barge and schooner, appealed. The appellate court affirmed the decision of the court below, and said: "The evidence is uncontroverted that after the collision the schooner proceeded on her course without stopping to see if any assistance was required by the barge, and without giving her name, hailing port or port of destination, and the appellants contend that for such omissions she should be held to have been in fault, according to the statute of September 4, 1890. There was nothing in the evidence disclosing on the part of the schooner's captain any indifference to or reckless disregard of his duty towards the vessel with which he had collided, and this court cannot say that, in view of all the circumstances surrounding him, he was not warranted in believing that he had ascertained that no further assistance was necessary. * * * We do not think, upon the evidence now before us, that the Jacob S. Winslow should be condemned under the act of September 4, 1890. If she is to be held liable at all it must be because of some fault in her navigation contributing to the collision."

BUSINESS NOTES.

Apples for the United Kingdom.

The London *Financial News* says: "A glut of Canadian apples may be looked forward to in this country, for the Dominion crop is calculated at 3,750,000 barrels of good sound fruit. The biggest import of apples in any one year from Canada and the United States has been 1,450,000 barrels; but this year's crops are so big that three times that quantity may be shipped to the United Kingdom."

German Exports to the United States.

A Berlin cable dispatch says: "Official statistics show that German exports to the United States in 1895 were 368,699,000 marks, compared with 271,115,000 in 1894. During the same period the imports from the United States were 511,703,000 marks, against 532,939,000 marks, while the total imports from all countries were 4,246,111,000 marks, and the total exports to all countries were 3,424,076,000 marks, compared with 4,285,533,000 marks and 3,051,480,000 marks in 1894."

Market for Bicycles in Bavaria.

Bavaria has "gone bicycle crazy," according to a consular report to the State Department from that kingdom, "and as the demand cannot be even partially supplied by European makers, there is an excellent market for American wheels. The strong prejudice against ladies appearing on wheels has disappeared in Munich and other cities, and now married women, single women, old and young, are enthusiastic devotees of the sport. Consul Carpenter at Furth thinks many thousand American wheels can be sold next spring in his vicinity. The roads of Bavaria are magnificent, hard, smooth and clean."

Texas Cotton for Japan.

A Waco, Tex., dispatch, September 28, says: "Mr. Tsurutani, of Kobe, Japan, is here with letters of introduction to local cotton shippers. The object of the visit of Mr. Tsurutani to Texas is to arrange on the part of Japanese manufacturers of cotton textiles for direct importations of Texas cotton into Japanese ports. Mr. Tsurutani says there are eighty plants in Japan for the manufacture of cotton goods, and other mills are about to be established. His nation intends to supply cotton goods largely in the East, and will send buyers annually to the cotton states, as is the practice with the European spinners. Mr. Tsurutani says Texas cotton will shortly be shipped from San Francisco to Tokio on a Japanese steamship, which will be a new movement in the cotton trade."

Cigar Trade Statistics.

At the International Cigarmakers' Union Convention, Detroit, September 28, President Perkins read his report, which "shows that the cigar trade has not materially improved, although there has been a slight increase in the output. The total product for consumption in the United States for the last fiscal year, ending June 30, 1896, was 4,237,758,943 cigars. The total number of factories of all kinds reported is 14,070, of which number 7,147 are strictly union and 6,923 are mixed and non-union. The union factories give employment to 12,278 union hand workmen and 15,247 union mold workmen. The open shops employ 10,675 union and non-union persons. The total amount of wages paid out yearly is $41,767,989, and the value of the product is $129,693,275. The total number of unions in good standing is 350, with a membership of 28,700."

French Canadians in Brazil.

A London exchange says: "Most of the French Canadians who were on the point of taking ship for Brazil thought better of it at the last moment, on the strong representations of their government that the lot of immigrants into the huge republic was not altogether a happy one. The Brazilian government has a theory that the preponderance of any one nationality among the foreign inhabitants may become a source of political danger, hence its recent beating up for immigrants in two such divergent regions as the French portions of Canada and Japan. Italians seem to be the most suitable immigrants into Brazil, for they readily accommodate themselves to new conditions of life and become happy and contented under circumstances which are easier than those at home, where the struggle for life is severe."

Natural Gas Supply.

The Philadelphia *Press* says: "Natural gas in this country, according to Mr. J. D. Weeks' report, must before long disappear, and the value of its product has fallen one-half in seven years. In 1888 its value was $22,629,875. In 1895 it was $13,006,650. In this state the fall has been still more rapid. In 1888 the natural gas was worth $19,282,375, and in 1895 it was $5,852,000. The decrease has been less rapid since 1891, owing to the general introduction of meters, but it has gone on at the rate of about 5 per cent. a year. As the product shrinks rapidly when pressure falls, it may not be over ten or fifteen years before very little gas is produced. The waste of the past ten years will be looked upon as egregious folly. Mr. Weeks points out that when the number of wells is regulated and restricted, the yield of gas lasts longer. This certainly suggests the wisdom of legislation and inspection on this subject."

Retail Prices for Twenty Years.

The *American Agriculturist* says: "Retail prices are not as much affected by the decline in values as one would think. The coöperative stores of the employees of Krupp's great gun works, Essen, Germany, have always bought their supplies in large quantities for cash, and retailed for cash at an advance just enough to cover the most economical management. Yet the following table shows that twenty-seven articles which retailed at a total of $2 96 on the average in 1873 cost an average of $2.83 in 1893. The reduction per unit was from 12c. to 11c. in the twenty years. The explanation seems to be that wages so advanced meanwhile as to more than offset reduced transportation and production charges. Our table is condensed from Department of Labor Bulletin 5, fractions omitted:

AVERAGE RETAIL PRICES FOR THE YEARS NOTED.

Articles.	1873.	1893.	*Articles.*	1873.	1893.
*Potatoes, bush.	$0.41	$0.32	Buckwheat	$0.04	$0.03

Wheat flour	.04	.03	Average	.12	.11

* Per bushel. † Per quart, all others per pound.

Debtor Farmers and Free Silver.

The Philadelphia *Ledger* says, editorially: "The debtor farmer's experience, therefore, would be: 1st. Creditors will press for payment and demand higher rates of interest. 2d. Silver owners and not debtor farmers will get the new coin and the certificates. 3d. Farm products will appreciate slowly as money depreciates. 4th. The farmer will lose on all money he obtains for his crops, as this money will constantly and without limit depreciate in value. 5th. For every article the farmer has to pay he will give prices higher at least to the extent of the depreciation in the value of his money. The only exception to this may be that the depreciation in money may enable the farmer to cheat his hired labor out of a small portion of its hard-earned daily wages without becoming amenable to the law. If the farmers will do their own thinking and not be influenced to vote in favor of the man with the smoothest tongue and the least honesty, there can be no possibility of such a disaster overtaking this country, as would be the election of Bryan. Every farmer knows he can take 2½ bushels of wheat to the mill and get 100 pounds of flour, which is called a half barrel. If the United States should enact a law requiring each 50 pounds of flour to be called a half barrel, how much wheat would the farmer expect to give for such a half barrel?"

Growth of the Tinplate Industry.

The *Engineering and Mining Journal* says: "The growth of the tinplate industry in the United States is illustrated by the fact that the exports of tin from the straits direct to this country for the seven months ending with July this year reached a total of 9,048 long tons, or more than twice the quantity noted for the corresponding period last year. This year the United States took 29.7 per cent. of the total shipments from the straits, against 15.1 per cent. last year. This statement includes only the direct shipments, and makes no mention of the metal which reaches us by way of England and Holland. While the total tin imports into the United States for the earlier months of this year showed a gain, the business depression affected them later in the year, and the total reported by the Treasury Department for the seven months elapsed has been 10,586 long tons, against 14,416 tons last year. Nearly all this decrease was in the months of June and July. From the Treasury returns we also find that the imports of tinplates decreased from 294,848,812 pounds in the seven months of 1895 to 179,386,938 pounds this year, showing a decrease of 39.2 per cent., which further illustrates the extent to which the demand is now supplied from our own works. It is to be regretted that we have not yet opened tin mines which give any reasonable hope of providing our works with domestic metal."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Cooler weather and continued purchases by interior merchants, notably west and south, continue the slight improvement in trade recorded in preceding weeks. Merchants at primary cotton markets and at larger centers in the spring wheat region report a better movement of staples, due to unusually heavy receipts of those crops. Throughout the central west, including such points as Baltimore, Cincinnati, Chicago and St. Louis, the volume of trade falls behind that of a year ago in some instances, but is equal to it in others. At eastern centers the improvement is seen in greater ease in the money markets and more disposition to discount commercial paper, although at unchanged rates. Wholesale merchants report a better feeling very generally, but few anticipate any material increase in the volume of business this month.

Mercantile collections continue slow and as difficult to make as heretofore, except in the cotton states and at some points in the northwest, where heavy crop receipts have enabled interior merchants to liquidate long-standing accounts. The more conspicuous demand at larger interior cities is for dry goods, clothing, shoes, hardware, leather and lumber. There is also a better demand for pig iron and for steel. Business in cotton goods has been checked by the advance in prices, and mill stocks tend to accumulate again.

For the third week in succession prices for some of the more important staples continue upward, notably for cereals, wheat alone having advanced more than 13c. per bushel within a month. The world's statistical position of wheat indicates a return of some of the conditions of 1879–80, which resulted in heavy wheat exports from the United States at rapidly advancing prices. Quotations for leather, lumber, wool and for naval stores are also higher. The decline in cotton appears due to extraordinarily heavy receipts at primary markets, in addition to which there are more important decreases for sugar and petroleum.

Total bank clearings for September amount to $3,664,000,000, a decrease of more than 11 per cent. compared with September, 1895. For nine months of the current calendar year the clearings aggregate $37,025,000,000, a decrease as compared with the corresponding portion of 1895 of 2 5 per cent. The latter decrease is explained by the moderate revival in trade and in industrial lines which characterized the period from March to September, inclusive, in 1895.

The total number of business failures throughout the United States from January 1 to September 30, 1896, is 11,280, the largest aggregate reported for a like period since records of this character have been compiled. The next largest corresponding total was 11,140, for nine months of the panic year 1893. Contrasted with the corresponding portion of 1895, the increase in number of failures is 21 per cent., in total liabilities 56 per cent., and assets 63 per cent. While there have been 140 more business failures this year than in nine months of 1893, total liabilities, amounting to $171,350,000 in 1896, are more than one-half the corresponding total three years ago. Failures in the third quarter of the current year were extraordinarily heavy. The nine months' record of failures, which exceeds that in the correspondig portion of the panic year 1893, appears due, in part, to the effects of the widespread, active agitation for a change in the standard of value.

The New York stock market was fairly strong, in the face of the rise of exchange, the stoppage of further gold imports, and the disposition of professional operators to realize profits, but on Friday there was a moderate reaction. At concessions in the market stocks are in good demand, and public interest in speculation is increasing. Manipulative pools are at work in many leading stocks. Foreign exchange is strong at 4.85@4.85¼ for demand sterling on repayment of sterling loans and the smaller supply of commercial bills.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 4,215,791 bushels, the largest week's exports of wheat since the second week of September, 1893. It is compared with 3,930,000 bushels last week, 2,613,000 bushels in the corresponding week one year ago, 3,243,000 bushels two years ago, 3,189,000 bushels three years ago, and with 4,017,000 bushels in the corresponding week of 1892.

Higher prices for some varieties of produce have stimulated trade in the Province of Ontario, from which Toronto jobbers have reaped benefit. Trade at Montreal is only moderately active, but shipments of flour and of apples to Europe are heavy. There is no increase in the volume of business at Halifax. The Nova Scotia potato yield is very large, but the quantity gathered will be small. Notwithstanding bountiful crops on Prince Edward Island, trade is not stimulated because prices are low. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $18,623,000 this week, compared with $19,729,000 last week, and with $20,541,000 in the corresponding week last year. Two years ago the total was $22,710,000. Total business failures throughout the Dominion of Canada amount to 1,651 for the past nine months, an increase of 315 compared with the corresponding period last year. Total liabilities amount to $12,219,000, against $9,769,000 last year. The increase in number was distributed largely throughout the provinces of Ontario and Quebec—126 in the former and 150 in the latter. Total liabilities of failing traders in Ontario are smaller this year than last, but the like total for Quebec is larger this year than in nine months of 1895.

FINANCIAL.

The Money Market.

The supply of money available for time loans or for the purchase of commercial paper in the New York loan market has increased during the week just ended, the tone of the market being more cheerful on the favorable bank statement of last Saturday and the decreased demand for funds out of town. The hardening of exchange and the suspension of gold-importing arrangements has had little or no influence. Time money, as already indicated, has been offered with some freedom and from an increasing number of sources. The principal inquiry is for short period money, in loans running little beyond the date of the November election. On the other hand, lenders favor longer arrangements at the present basis of rates, which are 6 per cent. for all periods. The demand for mercantile paper is better, and increasing out-of-town inquiry has been noted, while some concessions are observed in rates, which are quoted 7@9 per cent. Call money has been 3@6 per cent., the bulk of the week's business having been at 4@5 per cent., though preparations for the October 1 disbursements caused a harder tone on Wednesday.

Foreign Exchange.

A reaction and rally have made their appearance in the exchange market this week. Such a tendency was certainly due after the depression and heavy gold imports of the last month. Inquiry has not been large, though the easier tone of the money market creates a belief that merchants are once more in the market for bills. The real feature, however, has been the smaller supply of commercial bills, which, in a measure, reflects the want of adequate vessel room at ports of shipment. The maturity of some sterling loans is also suggested as having an influence, and the firmer tone of the London money market was also a factor in the case. The result has accordingly been a cessation of gold-importing arrangements, though it is understood that $2,000,000 more has been forwarded from Australia to San Francisco. The gold receipts at this city and Boston during the week aggregated $5,500,000, making the total to date $36,000,000

Posted rates were marked up on Monday from 4.82@4.84½ to 4.82½@4.85, and on Wednesday a further rise in the quotations to 4.83@4.85½ was necessary. Actual business for demand sterling hardened from day to day, the rate on Thursday being firm at 4.85¼.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.85¾ @4 86; commercial bills, 4.81¾ @4,82; francs, 5.20@5.18¾; reichsmarks, 94⅝ @95 5/16.

The Bank of England's discount rate remains unchanged at 3 per cent. The bank this week lost £769,000 in specie, and the proportion of reserve fell from 55.45 per cent. to 52.14 per cent. In the London open money market discounts advanced to 2½ per cent., but declined later on to 2⅛@2¼ per cent., the tone being eased by the payment of October dividends, and by the release from the bank of a portion of the Japanese indemnity. The fact that gold shipments to this country have been temporarily suspended also had a good effect on sentiment in London.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending September 25, 1896:

	1896.	1895.
Dry goods	$1,825,984	$2,838,334
General merchandise	5,496,694	6,918,570
Totals for the week	$7,322,678	$9,756,904
Previously reported	336,478,444	380,080,368
Since January 1	$343,801,122	$389,837,272

The exports (exclusive of specie) from New York to foreign ports for the week ending September 29 were $961,796 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$8,506,717	$5,912,627
Previously reported	275,433,955	249,167,793
Since January 1	$283,940,672	$255,080,420

Silver.

Throughout the week the silver market has been firm and featureless. Prices show little or no variation, and the situation is without material for comment.

THE STOCK MARKETS.

The New York Stock Market.

The feature is still the strong and advancing tone of the market on professional trading, and the resistance which prices exhibit to either realizing or selling by the bears for the purpose of producing a depression. Both of these were experienced during the week, the traders putting out considerable amounts of short contracts, while on Wednesday in particular some large interest in the market seems to have taken profits on a large block of long stock. It was noticed that at all declines stocks appeared to be wanted, and commission houses report a better inquiry, though it would be rash to assume that public interest is developing as yet to any considerable extent. The political situation for the week was considered satisfactory by Wall street, and the market was not affected by the advance of exchange rates and the consequent stoppage of gold-importing arrangements. The fact that nearly $40,000,000 of specie has actually come into the country, that the Treasury reserve is up to $124,000,000 or more, and that money on time can be obtained at 6 per cent., outweigh all unfavorable elements in the situation. Nor has much attention been paid to the unfavorable earnings reported by trunk-line, granger and southern roads. The conclusion is apparently drawn that the decreases in question are the result of conditions that are now disappearing, and that the expected improvement in the general situation and in the railroad world in particular can be legitimately discounted. The advance in wheat had a tendency to strengthen the stock market, and it was believed that in a number of important trading stocks powerful pools and manipulative interests have been actively at work. London has not been a factor, though prices of American securities there have been generally strong, and a more favorable feeling as to the political and financial outlook here is asserting itself in the British press.

Sugar has been the feature of the market. A reduction in the price of the refined and conflicting rumors about the purchase of an independent refinery at Camden, N. J., gave occasion for fluctuations and for manipulation, which, however, does not seem to indicate that the insiders are bullish. Burlington's August statement was expected to show a loss of $150,000 in net earnings. As a fact, the decrease was only $30,000 odd, and shorts sold on the theory just mentioned were covered extensively. Reading advanced on pool support and speculative buying, and Louisville & Nashville was helped by foreign interests.

On Friday the signs of profit taking on the late advance became more strongly marked, and the result was a fairly general lowering of quotations, interspersed, however, by advances for a few stocks. The decline, when developed, was rather slow and irregular, and at the lower range of quotations trading was dull, with the day's sales, as a whole, below the average.

Boston Stock Market.

The market has shown more strength as a whole. Atchison has been more active and values are up 1 point. Chicago, Burlington & Quincy 1¼ points higher. Copper stocks have ruled firmer, with Boston & Montana 4⅜ points higher under good trading, while Calumet & Hecla closes 9 points higher. Sugar has ruled steady in price, with considerable trading noted, the close being ¼ point lower than a week ago. Bay State Gas has been very active, but the price has sold down 1½ points for the week.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending Price Oct. 1, 1896.	Week ending Price Sept. 24, 1896.	Sales Oct. 1, 1896.	Sales Sept. 24, 1896.

TRADE FEATURES.

ADVANCES IN PRICES OF CEREALS, WOOL, LEATHER AND OTHER STAPLES—ONLY A MODERATE VOLUME OF BUSINESS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, October 2.—While the general tone of business is quiet, a better feeling is apparent in many departments of the merchandise market, and the tendency appears toward further improvement. The money market is easier, with confidence increasing, although not much decline in rates is looked for before the election. There is a fair demand for business paper at 7@8 per cent., which includes an increased call from country investors. Call money is in fair supply at 5@6 per cent. on best collateral. Corporation paper is quiet, with double-name paper at 6@7 per cent.—some exceptions at 5½ per cent.—while single-name paper is quoted at 7@8 per cent. The boot and shoe market is firmer, but little is doing beyond selling samples and making them up. Some far-western buyers have placed part of their case orders for women's goods, but the tendency is to wait until after election. Leather is quiet but firm, with hides scarce and the market stronger. Iron and steel are quiet, with lumber in better demand and steady.

Providence, October 2.—General business remains about as last week. Cotton manufacturers are finding a rather better market than those engaged in woolens. Margins are small, however, in all lines, and owing to the purchasing power of a large portion of the community having been curtailed, the conviction is growing that when the improvement does come it will not be rapid.

Philadelphia, October 2.—Some houses in the yarn trade speak of a better feeling being apparent; there is practically little change in the situation, and business is very sluggish. Wool continues quiet. Dry goods jobbers are doing only a limited business. Clothing manufacturers find it difficult to place their goods in safe hands, and a number have adopted the course of retailing at low prices. Some little improvement is noted in boots and shoes. Morocco and leather continue dull, yet there is a slight tendency to higher prices.

Pittsburgh, October 2.—A steady demand continues for all staple lines. Prices are well maintained, and business generally appears in better condition than for some weeks. The local iron market continues to improve steadily, and prices are firm at present quotations. Inquiries are numerous, and all things point to a large increase in business during the next few weeks.

Baltimore, October 2.—The general feeling among various branches of trade is one of encouragement, business for the past two months having improved very materially, a good deal of which is attributed to the change in the weather, necessarily calling for a demand for fall goods. Collections are fairly good.

West and Northwest.

Cincinnati, October 2.—While the volume of business has not increased, a better feeling prevails.

Cleveland, October 2.—There is no special or actual change in general business other than an apparent improvement in sentiment regarding the outlook. Collections continue slow.

Detroit, October 2.—In general lines the volume of business is reported fair, but country remittances are not in proportion.

Chicago, October 2.—The position of the jobbing trade is without important change. The heaviest sales of the season have been made, and it is not expected that buyers will come in again in large numbers unless there is something unusually urgent in the country demand. Sales at present are as large as can be expected, and no special reduction is looked for during the coming week either in dry goods, clothing or shoes. The strength in the hide market, with large sales, has brought in more buyers for leather, and larger lots have been sold than for a month. Grained leather is 1c. higher, and the others are held with more firmness. Some of the large consumers are holding off until after the election, and cannot be induced to take hold before. With the light and heavy hardware men there is about the same volume of sales that has characterized buying of late, and prices are well maintained. There has been more inquiry for steel, and bars are held higher, with fair sales. Pig iron is also showing more strength, and sales of good-sized lots have been made, one lot of 10,000 tons being closed. Furnacemen are afraid to sell heavily for distant delivery. This has a tendency to check slight falling off in dry goods, boots and shoes, and an improvement in groceries. Business in business; in other lines there are no new features. Wool receipts, 768,008 pounds.

St. Louis, October 2.—The fall festivities are mainly responsible for the presence of numerous visitors, among whom are many merchants from contiguous territory who are combining business with pleasure. While they are buying sparingly, there is a better feeling prevalent, and trade in staples is comparatively good. Tanners have advanced the price of leather; withal, the demand is considerably increasing. The hide market is strong, stocks being light. Iron and steel bars, galvanized and black sheets are moving freely at unchanged values, and manufacturers are reluctant to quote figures for future delivery. Some improvement is noted in the lumber business.

Kansas City, October 2.—No change is noted in trade conditions this week. Everything is quiet and dull.

Milwaukee, October 2.—With but few exceptions general conditions of trade remain unchanged. Collections continue rather slow.

St. Paul, October 2.—Compared with the same week a year ago the general trade situation is about the same. Dealers in dry goods report increased sales, but otherwise there is little change shown from last week. Collections are fair, and in some lines show an improvement.

Minneapolis, October 2.—Shipments from jobbers' hands are about as usual at this season, and are comparatively moderate. The rise in price of wheat may, however, stimulate trade, and better collections are also looked for. Its effect is already noticeable in the lumber trade. Flour mills are having large output, and sales are also large.

Duluth, October 2.—General trade presents about the same features as last week. There is more inquiry for lumber. Wheat has advanced several points and flour is higher.

Omaha, October 2.—The demand for dry goods and furnishings shows improvement, and the grocery trade are doing a good business. Collections are very slow.

Sioux Falls, October 2.—The advance in wheat has materially stimulated trade at interior points. Wholesale houses report larger orders, with better collections. Range cattle have been shipped in large numbers during the past week. As a general result dealers are feeling more satisfied.

Southern Cities.

Charleston, October 2.—Wholesalers report a

other lines continues about the same. Cotton is coming in freely. Collections are improving.

Atlanta, October 2.—Merchants generally are satisfied. Trade and collections remain about the same as last week.

Augusta, October 2.—Notwithstanding the effects of the storm, good reports are still made by jobbers. Collections are very fair and the money market active.

Savannah, October 2.—Retail trade is good, but wholesale only fair. Both report good collections—better than at the corresponding period of 1895. Some are paying debts of long standing. Naval stores receipts show a decrease, but shipments an increase. There is an advance in prices of higher grades. Rosin market firm.

Jacksonville, October 2.—There is no change from last week.

Birmingham, October 2.—Trade is picking up. Collections are little better, and improvement in feeling all around.

Chattanooga, October 2.—There is no change of any special note. Cool weather has increased orders for dry goods to some extent.

Nashville, October 2.—No notable difference is noted in the movement of merchandise. There is a good degree of life, with fair collections. The feeling in financial circles is no worse, with no relaxation in conservative methods. The dividend-paying banks have maintained their regular rate of dividends.

Memphis, October 2.—Business is fairly active, especially in hardware and groceries. Collections are satisfactory.

New Orleans, October 2.—The business situation is improved, with a fair volume of orders. The earlier movement of the cotton crop has given an impetus to all lines. Sugar grinding on the new crop is just beginning. Rice is in good demand, but receipts are light and the crop disappointing. The money market is firm, with gradual relaxation of stringency and commercial paper more freely discounted.

Galveston, October 2.—Jobbers report an improvement in demand, and a number of spot buyers have been in the market. Collections are also reported improving.

Pacific Coast.

San Francisco, October 2.—Commercial lines are unchanged. A fair movement is reported in general merchandise. For export, dried and canned grapes and fruit are in fair demand. The produce market active. Wheat freights are firm.

Portland, October 2.—The hop market is improving and shipments are being made on contract. No wool is being sold. Steamers to China and Japan are taking some heavy flour cargoes. A fair grocery business is being done, and dry goods show improvement. Willamette valley farmers are still holding their wheat.

Seattle, October 2.—There is little change to note this week, though the rapid advance in the price of wheat is encouraging to the general state of trade.

Tacoma, October 2.—Exports for the last nine months are 50 per cent. in excess of those for the same period last year. Imports are slightly decreased. The foreign lumber trade last month is the largest in the history of the port. Coal shipments also show a large increase. Wheat still moves slowly. Local business is quiet.

Canada.

Toronto, October 2.—Trade shows little change in wholesale departments. There is a better feeling, however, owing to an advance in many lines of produce. Wheat is moving slowly and prices are higher, at 70c. at Ontario points.

Montreal, October 2.—Flour has made steady advance and numerous sales are reported. Shipments of apples to Europe continue heavy. One hundred and forty-five thousand barrels have been exported this season from Montreal and about 45,000 barrels from Halifax. General business is moderately active, without many important changes in prices. Hardware and paints continue dull, while groceries show fair activity. Collections are slow.

Halifax, October 2.—Wholesalers report a moderate amount of business this week, with collections about up to the average. The movement in fish is light, the losses of last year having discouraged a great many buyers. Advices from several localities state that potatoes are rotting in the ground, so that while the yield is very large, the harvest will be but an average one. Prince Edward Island reports excellent crops, but prices very low and unremunerative. In St. John, N. B., business is fairly active owing to the large influx of visitors to the exhibition. There is not much doing in lumber shipments. Tonnage is scarce and freights high.

Dry Goods.

The tone of trade is steady, with jobbers reporting a very good business in seasonable supplies. Cotton fabrics are quiet, and business at first hands has been checked by the general advance in prices. The price of raw cotton is above the parity of goods, and it looks as though further curtailment in production would be necessary to bring the market on a paying basis. British fabrics in fall styles are going well, the curtailment in production of these goods giving promise of their being cleaned up well. Ginghams are meeting with a rather better sale and prices are firmer. Dress woolens are quiet, although a better jobbing movement in plaids is noted. It looks as though plaids of all kinds would again become popular. Men's-wear woolens are showing a moderate increase in spring orders, but it is mostly low cost stuff that is selling.

Wool.

The wool market shows continued activity, and values have hardened considerably under the better demand. Holders are no longer cutting prices in order to make sales, but are adhering to full market rates, and bids a fraction of a cent below their views will prevent a purchase. It has been largely in territory wools that recent business has been done, and at the close good staple lots of fair medium are quoted up to the basis of 30c. scoured, with few desirable lots available at less money. It is difficult to get much more for fine, while medium lots are quoted, scoured, at 26@27c. Fine fleece wools are in short supply and firmer under a quiet demand, while medium fleeces are also doing better. The market is about 1c. higher on unwashed quarter and three-eighth bloods, 15@16c. covering recent sales. Pulled wools are steady and rather firmer. Australian wools sell fairly at steady prices. The London market is a shade easier, but values there are yet above the parity of sales on this side. Carpet wools are quiet but firm.

EXPORTS OF WIRE NAILS.

"According to the statements of several wire-nail manufacturers," says the *Journal of Commerce*, "there has been a material gain in export trade during the past year, and more especially during the past six months, particularly with Japan, China and Australia. Up to within a comparatively short time the greater part of the trade with these countries has, it is said, been handled by German manufacturers, but American competition is now being felt by these makers to a considerable extent. There has also been a considerable increase in exports of cut nails, but this has not been so marked as in the case of wire goods.

"One reason for the increase in the trade of American houses is the fact that prices of German nails have been advanced somewhat during the past year, while some American houses have made unusually low prices on export goods in order to keep their plants running. The principal exporters from this country are members of the nail combination, or the trust, as it is generally known, but the pool does not fix the prices of export goods, which are considerably lower than the domestic prices.

"The following figures taken from government statistics show the total exports of nails for a series of years past. The official figures do not separate exports of wire nails from those of wrought, horse-shoe and other than cut nails. Spikes are also included in the figures, and tacks as well, in the tables for wire nails. The figures may, however, serve as a means of comparison:

EXPORTS OF NAILS AND SPIKES FOR FISCAL YEAR ENDING JUNE 30.

	—Cut— Pounds.	Value.	Wire and all other. Pounds.	Value.
1896	20,730,260	$428,630	8,031,927	$321,055
1895.....	16,895,428	283,646	4,367,267	210,192
1894.....	16,736,643	330,118	3,233,776	180,607
1893.....	15,604,347	330,554	2,300,501	158,093

"It is the opinion of some members of the trade that exports will continue to increase. A representative of one of the largest manufacturing concerns said: 'We can now produce nails about as cheap as they can be made in Europe, but we are at a disadvantage in the matter of freight rates. If American makers could get as favorable rates as German makers get their trade with all countries would increase greatly.'"

WORLD'S COAL SUPPLY AND DEMAND.

A late edition of *Cassier's Magazine* says: "In 1780, about the time the steam engine was invented, the consumption of coal in Great Britain was some 6,500,000 gross tons a year. It had arisen to 27,000,000 tons in 1816, to 50,875,000 tons in 1850, to 84,042,698 tons in 1860, to 112,875,525 in 1870, to 146,969,469 tons in 1880, to 181,614,288 tons in 1890, and to 188,277,525 gross tons (210,870,828 net tons) in 1894. The result of the discussions on the subject of the duration of the coal supply of Great Britain was the conclusion that if the output increases in the same ratio as it has for twenty or thirty years the coal will be exhausted in a little over a century. These estimates are now regarded as excessive, as it is conceded that there is in each nation a limit to industrial development, which, without considering the great economies in the use of fuel, will also limit the expansion of coal production. Mr. Gruener places this limit for England at 250,000,000 tons, which supposes a mining population of 1,000,000 miners and a working population of 5,000,000. In the United States the production of coal has been increasing in a greater ratio than in Great Britain. We cannot go back to the eighteenth century and give figures of production of coal, nor is that necessary in order to indicate how enormous has been the increase in its production and consumption in the United States. At the tenth census, 1880, the production of coal in the United States is reported at 71,481,570 net tons; at the eleventh census, 1889, it had risen to 141,229,513 net tons, nearly double, and in 1893, according to the report of Mr. E. W. Parker, of the United States Geological Survey, it was 182,352,774 net tons, an increase of more than two and one-half times in thirteen years, doubling about every five years. Similar increases could be shown for the other great coal-producing countries, as Belgium, Germany, Austria, France and Russia. The world's demands for heat and power are increasing marvelously, while the world's supply of coal is a definite quantity, and it is an evident proposition that with the exhaustion of its coal not only will the power and influence of a nation decline, but even its existence may be imperiled."

LONDON PRICES OF SECURITIES.

The London *Financial News* says: "Between August 20 and September 19 a decline of £70,033,000 occurred in the market values of the 325 representative securities tabulated from month to month by the *Bankers' Magazine*. This decrease is equivalent to 2.1 per cent. The fall in 14 British and Indian Funds amounted to £26,295,000, and in 19 British railway ordinary stocks to £12,370,000, or 3.7 per cent. This proportion of loss is exceeded only in the cases of home corporation and railway preference stocks, which each lost 3.9 per cent., Indian railway stocks, which declined 4.7 per cent., and breweries, which fell 4 per cent. There were improvements in American rails (2.2 per cent.) and in their currency bonds, in foreign railways (3.2 per cent.) and their obligations, in all categories of bank shares save "semi-foreign," in coal, iron, steel, canal, dock and shipping shares.

COMPARATIVE PRICES OF WHEAT.

The Cincinnati *Price Current* says: "There has of late been more or less call for statistics of prices of wheat and other commodities for earlier years than usual exhibits have presented. It is an open question as to what value may be attached in a general way to comparisons of market prices of products in late years, and at a time when there was lacking cheap and quick transportation facilities and a variety of other factors now available in reducing cost of production and marketing. In order, however, to respond to the demand for such information, the *Price Current* has compiled an exhibit of the monthly average prices of wheat at Cincinnati covering the period from 1844 to 1895, inclusive, fifty-two years. The table also shows the yearly lowest and highest monthly averages, and the annual averages. The compilation is constructed with reference to calendar years, and those who desire general averages say for years ending July 1, or August 1, or September 1, can readily compute the same from the monthly details. For the years 1862 to 1878, inclusive, when currency was at a discount, the prices represent the gold basis values, the computation being on the application of the monthly average gold premium to the monthly average currency price.

"For the first five years of the period mentioned the annual average price was 72c. per bushel, compared with 73c. for the last five years. For the first ten years the annual average was 74c., compared with 79c. for the last ten years. For the second period of ten years higher prices prevailed, notably in the early portion of the period, with 134c. the average for 1854 and 156c. for 1855, the general average for the period being 107c. In the subsequent ten years, 1864 to 1873, inclusive, the general average was 132c., gold basis, the average for this period on the currency basis being 177c. Prices were well maintained in the next ten years, 1874 to 1883, inclusive, averaging 108c. For the twelve years remaining, 1884 to 1895, inclusive, the general average was 81c., the first half of the period averaging 87c., the last half 75c. For the entire period of fifty-two years the general average was almost exactly 100c. per bushel.

"In 1850 the wheat production of the United States was 100,164,000 bushels, representing 4⅓ bushels per capita of population. For the ten years from 1862 to 1871, inclusive, the wheat production was advanced to an annual average of 5½ bushels per capita for the entire period. For the ten years from 1886 to 1895, inclusive, the average was over 7¾ bushels per capita for the entire period.

"It is interesting in this connection to note the varying prices of grain and flour in the different markets of the country at a time when railroad transportation was not available for equalization of values. In June, 1844, prices of flour, per barrel, and wheat, corn and oats, per bushel, were quoted as shown in the following table:

	Flour.	*Wheat.*	*Corn.*	*Oats.*
Cincinnati	3.40	50	25	17
Chicago	3.50	68	47	39
St. Louis	3.75	63	25	17
New Orleans	4.50	82	40	30
Louisville	3.85	65	22	18
Toledo	3.50	60	36	26
Springfield, Ill.	3.35	48	12½	13
Alton, Ill.	3.75	60	20	14
Buffalo	3.85	79	35	23
Albany	4.45	100	50	27
Pittsburgh	3.65	71	37½	20
Baltimore	4.35	98	45	24
Philadelphia	4.05	95	43	30
New York	4.50	101	47	31
Boston	5.00	...	50	37

"At that time the population of Cincinnati was about 70,000, Chicago 10,000, St. Louis 35,000, New Orleans 105,000, Louisville 28,000, Baltimore 145,000, Philadelphia 285,000, New York 385,000, Boston 110,000.

"The lowest and highest monthly average prices, and annual average prices, of wheat at Cincinnati are reproduced from the *Price Current's* detailed exhibit referred to, as follows:

	Low.	*High.*	*Av.*		*Low.*	*High.*	*Av.*
1844	59	77	69	1870	92	106	100
1845	52	85	70	1871	103	133	121
1846	45	80	60	1872	112	175	141
1847	62	102	83	1873	115	154	132

POSSIBLE MARKET FOR AMERICAN IRON ORES.

The New York *Engineering and Mining Journal* says: "In Germany, as in Great Britain, there has been for several years past a good deal of study and discussion over the future supplies of iron ore for the blast furnaces. The iron industry has been growing there, not so rapidly as our own, perhaps, but with fewer fluctuations and with more steadiness and regularity than that of any other country. Thus the German production of pig iron, which in 1890 was 4,658,451 metric tons, had advanced in 1894 to 5,559,322 tons and in 1895 to 5,788,798 tons, while the rate of increase so far during the present year has been such that the output of 1896 promises to reach 6,000,000 tons.

"The native iron ores were found sufficient for all requirements up to quite a recent date, but for several years past there has been a constant increase of imports. It cannot be said that the German ore deposits are becoming exhausted, but their exploitation has hardly kept pace with the demands of the trade, and in several of the districts the cost of mining is increasing with the depth and extent of the work carried on, and the time is approaching when new supplies must be had. In Upper Silesia, in the Harz and in the Dill-Lahn district, it is probable that the maximum supply has been reached, and the output of ores must in the future rather decrease than increase. With characteristic national prudence the German ironmasters do not wait until an emergency comes, but are already investigating the quarters from which the supply of native ores can be supplemented in the future.

"In 1894 the total amount of iron ore mined in Germany was 12,392,065 metric tons. The exports were 1,900,000 tons, but nearly all of these were of the minette ores of Elsass-Lothringen, which were shipped to the French furnaces just across the border, most of which were established when the minette ore district was mainly on French territory, and which still continue to use those ores. The imports of ore for the same year were 2,093,007 tons, of which 694,326 tons came from Spain, 572,289 tons from Sweden, 98,144 tons from Algiers, 98,275 tons from Greece, and the remainder from other countries, which include Belgium, Bohemia, France and Russian Poland. The Spanish ores, though they form one-third of the imports, do not find especial favor in Germany, and it is not probable that their use will increase, especially as their price has been increasing, owing to the large demand for them in Great Britain, and also to the fact that some of the Spanish sierras are approaching the period of exhaustion of the more accessible and easily worked deposits. The Swedish ores are better liked, and a considerable quantity, chiefly from the Gellivara mines, is now going to Germany; but here again the growing British demand is intervening to raise the prices. Moreover, the exporting mines of Sweden are in the far north, where working and shipment are possible for only half the year, thus increasing the cost and limiting the product. The Greek and Algerian ores are taken only in limited quantities, and these are not increasing.

"The German demand is not for a Bessemer ore. The production of Bessemer metal is comparatively small, fully seven-eighths of the steel produced being made by the basic process. The minette ores, which supply a large part of the burden of the furnaces of Luxembourg, Lothringen and the Rhenish-Westphalian district, with an average of from 35 to 40 per cent. iron, carry from 0.75 per cent. upward in phosphorus. Thomas pig—that is, iron made for conversion by the basic process—constitutes about 50 per cent. of all the iron made in Germany.

"It would be, of course, necessary that mines furnishing iron ore for export should be so located as to obtain a low freight rate to tidewater, the ability to place the ores on shipboard at a moderate cost being the next element to be considered after the quality of the ores themselves. Although the freights on the regular Atlantic lines are now rather too high for ore shipments, there would be very little difficulty in obtaining low ocean rates if a considerable trade should be developed, since there is always abundance of ship tonnage to be had, and the competition of sea carriers is usually sharp.

"As to the mines which could furnish the ores, there are certainly some in New Jersey which could meet the conditions, and probably some in eastern Pennsylvania also. The Lake Champlain district and the Hudson river ores have the advantage of cheap water carriage to the port of New York. Most of the New Jersey mines have only a short rail haul. It is quite possible that an export demand may enable some of those in Morris, Sussex and Warren counties, now closed, to reopen, and to work at a profit. The Lake Superior ores would be out of the question, owing to the cost of transportation to the seaboard, as would probably be any ores further distant from the coast than eastern Pennsylvania. Some of the southern ores also might fill the requirements. In this connection also it is worth while, perhaps, to inquire whether some market for Alabama basic pig could not be found among the German steelmakers.

"This question of possible iron ore exports has never before, we believe, been brought up in this country. It is, however, in view of the facts we have stated, worth investigation, since there is at least a probability that such a trade could be established, and once begun it would be likely to continue."

BRITISH MANUFACTURED IMPORTS.

Sir Howard Vincent has written to the London *Times* "suggesting that the Trade Union Congress should consider the loss of wages to British workmen indicated by the fact that 'the importation of foreign manufactured goods for the year ending the 31st ult. amounts to £80,504,991.' On this a correspondent writes: 'As compared with Sir Howard Vincent, I am, no doubt, a mere child in these matters. But with the curiosity and simplicity of a child I should like to ask him how these foreign manufactured goods were paid for. If they were not paid for, then it would seem as if some one in this country had benefited to the extent of £80,000,000. If they were paid for in gold, then, as this country does not produce gold, I suppose goods to the value of the gold required must have been exported in order to get the gold to pay for the imported goods. In that case it must be shown, and must certainly not be assumed, that the wage-earners of this country are in any way the worse for the transaction. If they were paid for directly in goods precisely the same reasoning applies.'

"Mr. W. Farrer Ecroyd replies that one form in which payment is made for foreign goods is that of steam engines and machinery, with which other countries make articles to compete with our own productions. Colonial wool, too, is increasingly exported, and reimported in the shape of goods manufactured in France. The English capitalist is every year more clearly seeing the advantage of manufacturing abroad, thereby getting two free markets for his goods. The immense sums due as interest from other countries to ours help to pay for our increased imports of foreign manufactures and luxuries; but this, Mr. Ecroyd says, 'forebodes continually increasing industrial and social troubles at home, and a dangerous growth in foreign countries of that hatred of the alien creditor and investor which has been of late so unpleasantly manifested in large sections of the United States.'

"Sir Howard Vincent says that the £80,504,991 worth of foreign manufactures, carrying over £40,000,000 in wages into the pockets of German, American, Swiss and Belgian artisans, were paid for 'by the purchasers of those foreign cotton, linen, silk, iron, leather, glass, woolen, zinc, steel, clock, fancy and other manufactures which could have been made better in England by giving British wages to British workers.' These £40,000,000 of British wages paid to foreign workers came in part from the interest of millions sent to foreign countries to enable them to compete with us in manufacture and to oust us from their markets, instead of being employed in the development of domestic resources."

TRADE OF CONGO FREE STATE.

A report on the Congo Free State has been made to the State Department by United States Consul Dorsey Mohun, who traveled for two years with the Belgian forces through the interior of that country. Where money is made the medium of exchange, brass rods of different lengths are used as standards of value in some districts, and in others pieces of cotton cloth, squares of woven palm fiber and beads pass for currency.

"The first market described is that at Leopoldville, on the Lower river, where twice a week three or four thousand natives bring their products to exchange for gunpowder and checked cloth, the only money in use being brass rods or 'mitako,' which are cut in lengths eight inches long. At Bananapoint the articles used for trade with the natives are red bandana handkerchiefs, cloth, beads, machetes, old silk hats, colored parasols, cheap knives, flint-lock muskets, powder, brass rods, crockeryware, tinware, old uniform coats, old derby hats, rum, cheap matches and cologne. All these articles are especially for the trade, and the standard of value is a piece of handkerchief twenty-four feet long and three feet broad and valued at 50c. When the trader buys produce he gives out cards to the natives, which are good each for one piece of handkerchief, and when the caravan has been bought out the natives come in to the fetich or store and hand in their cards, when they can select what they want to the value of the cards held. As a rule they will not touch money, regarding it as useless, and this, of course, is a great advantage to the traders, who make large profits in exchange for handkerchiefs which probably cost him, landed in Congo, duty paid, 20c. a piece.

"At Lake Leopold the medium of exchange consists of small white and blue round beads, small cowrie-checked cotton cloth and stripes, brass rods in small quantities, large and small bells, tinplates and looking-glasses. American sheeting, commonly known throughout Central Africa as 'Merikani,' also goes well.

"At Yambinga brass rods, beads and cloth are currency, the rods being uniformly twenty-four inches long. One stone flint—for flint-lock musket is worth nine pounds of rubber at Ikimi, Lusambo, which is a large state post established to block the progress of the Arabs; westward is the depot of a thrifty, industrious, populous district. Food is ridiculously cheap, and a small egg cup full of blue glass beads, a little larger than pin heads, will purchase food for one man for a week. The other currency is copper crosses, cowries, brass rods and cloth. Coffee and cotton grow wild, and natives own a good many cattle. A cow can be bought for one flint-lock gun, valued at $2.50 on the coast. The dash of Arab in these people makes them exceedingly clean, in strong contrast to Congo savages. Mr. Mohun says that while the Congo people are satisfied with a strip of dirty cloth a foot wide, covering him in front and behind, with the ends tucked in a string round the waist, the Arab boy will sew all his cloth together which he receives in pay, and drapes the whole thing over himself. He saw one man wearing at least 200 yards of such cloth, and it was always kept clean. At Kassongo, where a great market is held three times a week, the money is 'madiba,' a square of woven palm fiber, and with six of these a man can get food enough to last him a week. These madibas are patched into garments and worn until needed as money. Madibas and iron hoes constitute the money a Nangivo, which is the African salt center. Here salt is also used to purchase everything, and is practically the standard of value.

"Ivory does not appear to be used in payment of dues and taxes anywhere in the state, probably on account of its size. It is first exchanged for brass rods and madibas, which circulate freely. Only in exceptional instances will any foreign coin be received in payment for articles, the natives being suspicious of it. Gold and silver are altogether unknown, and cannot be forced upon the savages. The Congo State is said to be bankrupt, expenditures more than doubling its receipts from domestic revenues; the advances from the Belgian Treasury and King Leopold are making up the deficit."

THE MERCANTILE MARINE OF AUSTRIA.

The London *Journal of the Society of Arts* says: "The mercantile marine of the dual monarchy is chiefly represented in foreign waters by two great steamship companies, namely, the Austrian Lloyd Steamship Navigation Company, and the Royal Hungarian Steamship Company, Adria. Statistics relative to either of these undertakings are therefore, says Consul-General von Schoeller, interesting, as indicative of Austro-Hungarian trade with European and transoceanic countries. The operations of the two companies are confined within comparatively clear limits, for whereas the service of the Adria line mainly involves western ports, those of the Lloyd line principally extend to the east. Communication with Brazil, however, is maintained by both companies, that is to say, by the Lloyd boats from Trieste, and by the Adria vessels from Fiume. In virtue of a mutual understanding between the two companies, competition—so disastrous to similar undertakings in other parts of the world—has been avoided in connection with the traffic to Brazil, and it has been found possible to increase the sailings of the boats so that eighteen voyages to that country are now performed annually from the ports in question. At the end of the year 1895 the fleet of the Austrian-Lloyd Company consisted of 75 steamers, several of which were exclusively employed in the regular service to India and China. The number of voyages made by the Lloyd boats during the year reached a total of 1,220, of which 287 were to the east and Mediterranean, 197 to the Black Sea and Lower Danube, 36 to India, China and Japan, 9 to Brazil, 517 to the Adriatic, and 174 to miscellaneous ports. Within the period specified 276,034 passengers were conveyed by the boats of this line. The cargoes amounted to 755,678 tons. At the close of last year the Adria Company owned 25 steamers of the most modern construction. During the twelve months ended December, 1895, 125 outward bound vessels belonging to this line, conveying 128,954 tons of miscellaneous merchandise, were registered at Fiume, while the arrival of 163 Adria boats, with cargoes amounting to a total of 57,292 tons, was reported. In addition to the regular service between Fiume and the Adriatic and Italian ports, the boats of this line likewise undertook a number of voyages to North American, English and German waters. The extent of the traffic accomplished by these two companies during the past year can thus be estimated, and in presence of the depression brought about by keen competition that prevails among navigation companies throughout the world, the above figures furnish a proof of the enterprising spirit in which the two Austro-Hungarian undertakings are conducted."

BRITISH RAILWAYS IN 1895.

The London *Westminster Gazette* says: "The railway returns of the United Kingdom for the year 1895 contain much interesting information. At the end of 1895 there were 21,174 miles of railway open for traffic in the United Kingdom, of which 9,738 were single lines. In the last twenty years about 4,500 miles of new line have been opened for traffic, and construction still proceeds at an average rate of about 200 miles a year. Over £1,000,000,000 of capital is now sunk in British railways, which compares with only £630,000,000 twenty years ago. Then the average cost per mile of line open was £37,833; now it has grown to £47,280. For the year 1895 the total gross receipts of the British railways were £85,922,600. The working expenditure was £47,876,000, or 56 per cent. of the gross takings. The net receipts were £38,046,100, which represents a return of 3.80 per cent on the total paid-up capital. Twenty years ago the gross receipts were £61,250,000, the proportion of working expenditure was 54 per cent. of the total takings, and the return on paid-up capital was 4 45 per cent. It is gratifying to note a steady increase in the amount earned per mile of railway open, with a corresponding decrease in the amount per train mile run. Thus in 1871 the earnings per mile of line first exceeded £3,000, while in 1874 the

earnings per train mile were as high as 5s. 8d.; in 1890 the earnings per mile of line first exceeded £3,800, and for 1895 were £3,844, while the earnings per train mile fell below 5s. in 1885, and for 1895 were 4s. 9¾d. These two facts in combination indicate increased traffic, with lower fares for passengers and cheaper rates for goods.

"The statistics furnish some particulars with regard to the various lines. Thus, the largest system is the Great Western, with its 2,500 miles of line. The wealthiest is the London & Northwestern, with £116,500,000 of capital and £11,750,000 of revenue. The greatest number of passengers was carried by the Great Eastern, which carried nearly 91,000,000 in the year. But it should be noted that the Metropolitan and District railways between them carried no fewer than 114,000,000 passengers, while the little North London carried 36,000,000 passengers over its 12 miles of railway, by far the greatest number in proportion to size. The heaviest mineral traffic was on the Northeastern, which hauled nearly 34,000,000 tons of minerals during the year; but the largest amount of general merchandise was taken by the Midland, with 13,000,000 tons. The largest freight-carrying system was again the Northeastern, which in goods and merchandise combined dealt with over 43,000,000 tons in 1895."

TIMBER FOR SOUTH AFRICA.

The New York *Sun* says: "Eastern Texas has within a year set up an important trade in timber with South Africa. This long-range trade is the outcome of the improvement of the Sabine Pass, a waterway that the United States engineers have been dredging for years. When the timber agents of Mobile, Pensacola and other Gulf ports discovered the possibilities of the timber trade through Sabine Pass they began to make contracts for timber in southeastern Texas, and to ship the product to South Africa, where the activities of a rapidly growing population in a region almost bare of trees created a demand for timber.

"The timber belt of Texas is a region of about 30,000 square miles. The timber is transported partly by water, being floated down the streams, and partly by rail. Already several railway lines penetrate the timber belt, and connecting with these lines are many private tramways that lead to the saw mills. The climate is such that the lumbermen can work the year round. Negroes do most of the work at about $1.25 a day. They are preferred by owners and overseers to white laborers, and are probably better suited to the climate.

"Many hundred thousand acres of the Texan timber belt are as yet untouched by the ax, and in those parts of the region where the lumbermen are at work only the pine has been cut. Many of the trees are two feet in diameter, and some are much larger. South Africa has come in very opportunely to take the place of the Cuban market. The trade is carried on chiefly by large schooners, though steamers are engaged in it. The timber land, worth from $4 to $6 an acre, is held by individuals and corporations in great tracts, some as large as 100,000 acres. The owners are often nonresidents. The timber is used in wasteful fashion, but it is believed that the Texan forest belt will outlast the forests of Maine, and even of Michigan. It is estimated that there is in the Texan timber a half century of cutting.

"While the yellow pine of Texas is thus coming into market there is in the same region an abundance of oak and ash yet untouched. These hard woods are found along the water courses where the pine does not grow. The oak is excellent, and it is believed that at present prices this timber could be cut profitably."

ARGENTINE'S MEAT TRADE WITH ENGLAND.

The La Plata government (says the Buenos Ayres *Standard*) has just published Mr. Herbert Gibson's report on the export of meat. "It may be remembered that last year the government availed of Mr. Gibson's trip to Europe to name him special commissioner to study the questions of production and meat export, and the pamphlet now before us shows what an excellent choice was made by the provincial governor. Mr. Gibson divides his report into two parts, the first dealing with the export of live stock, and the other with the export of frozen meat. Let us examine the first section of the work. Mr. Gibson begins by pointing out that, in spite of the fall in prices for imported live stock in the United Kingdom—a fall produced, perhaps, by the very exports from Argentina—it nevertheless pays the foreign breeder to export live animals in preference to frozen meat. The expenses of exporting live stock are much greater than those involved in killing the meat and exporting it in a frozen condition. The comparative cost stands thus: For a wether frozen 16c. gold per kilo; for a wether exported alive 25c. gold per kilo. But whereas frozen meat only fetches 13c. to 14c. gold per kilo, 35c. to 38c. gold is offered for slaughtered meat. The export of live stock affords an opening for the alfalfa trade. Last year no less than 60,000 tons of alfalfa were consumed in that way. The following comparative table of the imports of live steers into the United Kingdom shows the hold Argentina has acquired in the market:

	Argentina.	*United States.*	*Canada.*
1890	653	384,198	120,469
1891	4,028	314,228	107,524
1892	3,499	392,679	97,946
1893	6,862	248,825	82,925
1894	9,534	381,657	82,318
1895	39,494	276,338	95,993

"In wethers the progression has been as follows:

	Argentina.	*United States.*	*Canada.*
1890	22,075	3,904	42,640
1891	20,911	10,537	31,633
1892	14,558	2,829	15,743
1893	22,365	....	3,589
1894	73,146	198,138	135,622
1895	308,094	453,210	214,310

"The imports of Argentine steers in England were about 6,000 a month in January and February, and in the same months the arrivals of wethers from here reached 22,271 and 26,900 respectively. Argentine meat, Mr. Gibson tells us, is quoted on a parity with United States and Canadian. Mr. Gibson points out that if we export live stock under the present onerous and even cruel conditions, there is really no reason why we should not send our flocks to be shorn in Antwerp, Dunkerque and London. It costs more or less the same to send a wether of 35 kilos across the ocean as to send half a ton of frozen meat. The deficiencies and cruelty of the present system of exporting live stock have attracted the attention of many leading men, who are endeavoring to find a remedy. Mr. Gibson, after showing the rude, primitive form of live-cattle export, and the deficiencies and cruelty of the system, expresses his opinion that in the end the frigorific system will prevail. It is by far the cleanest, the simplest and the most practical."

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men. It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

TO THE HOLDERS OF
Reorganization Certificates for
Philadelphia and Reading
RAILROAD COMPANY'S
First, Second, and Third Preference Income Bonds, Deferred Income Bonds, Stock.

NEW YORK, PHILADELPHIA, AND LONDON, September 24, 1896.

The Philadelphia and Reading Railroad and its affiliated properties having been sold on the 23d inst. under decree of the Circuit Court of the United States, and same having been purchased by the Reorganization Managers, all holders of the above-described reorganization certificates are notified that the fourth and final instalment, viz.:

$50.00 per $1,000 bond on First, Second, and Third Preference Income Bonds,
$2.50 per share on Stock,
$10.00 per $1,000 bond on Deferred Income Bonds,

being one quarter of the entire assessment on such bonds and stock deposited under the Plan, is hereby called for and is payable at either of our offices on OCTOBER 9TH, 1896, and all holders of such bonds and stock are required to pay said instalment on or before that date. Their reorganization certificates must be presented at the time of making such payment, so that same may be endorsed thereon.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.—1896

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 201 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

C. P. FRALEIGH, ... Secretary.

SATURDAY, OCTOBER 10, 1896.

No new developments have appeared recently in the political situation. Elections have been held in the states of Georgia and Florida which do not seem to indicate any very marked movement either way beyond pointing to a falling off in the Democratic vote as compared with 1892. The town elections in Connecticut appear to show Republican gains, but people are not paying so much attention to conditions in extreme sections of the country as they are to those in the middle western states where the general belief is that the battle will be decided. In those states the Republican and gold Democratic orators are just now concentrating their efforts. The managers of the forces opposed to the Chicago platform feel confident that the campaign in the east may be regarded as already won, though the wiser among them do not cease to warn their followers that a battle is won only when it is won; that it will not do for sound money men to relax their efforts, and that they should not rest content with simply defeating Bryan, but should strive to make his defeat so overwhelming that the question of free coinage will be permanently removed from politics.

Among the people who would be affected injuriously by the adoption of a free coinage policy are the holders of life insurance policies and their beneficiaries. The extent to which they would be affected is indicated by the fact that the regular life insurance companies have obligations amounting to about $5,700,000,000, according to a statement made in a paper read by Mr. William T. Standon, at the meeting of the National Association of Life Underwriters, at Washington this week. The reader of the paper said that under present conditions about $275,000,000 of annual income is sufficient to provide for these obligations. If, however, the value of each dollar paid to the companies should be scaled down to an effective purchasing power of about 52 cents, then, in order to maintain their obligations at their present value in effective purchasing power, the companies would need to increase their annual income from $275,000,000 to about $550,000,000. Unable to do this by reason of the nature of their contracts, their obligations of about $5,700,000,000 would fall in effective purchasing power to about $2,800,000,000.

Statistics of the foreign trade of the United States for the last four fiscal years are reviewed in a statement just compiled by the Agricultural Department, which also gives totals of the foreign trade of the country for a decade. The figures given show that during the ten years ended June 30, last, the total exports from the United States amounted to $8,357,077,604; imports for the same period being $7,656,127,784. The total commerce of the United States, including imports and exports, for the decade, was $16,013,205,388, or a yearly average of more than $1,600,000,000. Compared with the annual average of this ten-year period, the statement says that the figures for 1896 show an upward tendency not quite so marked as the gain over 1895, but sufficient to warrant the hope that unless some new disturbing factor arises, the commercial depression of 1894–95 is a thing of the past, and that the commerce of the country, the measure of general prosperity, will soon resume its former dimensions.

As regards the fiscal year just ended it is pointed out that American farmers sold to foreign nations $570,000,000 worth of their produce, a gain of $17,000,000 over the preceding year. The sale abroad of manufactured products gained $44,000,000 for the year. It appears that many of our principal farm products, like cotton, wheat, lard, leaf tobacco, etc., brought smaller returns from foreign markets than in 1895. Wheat, flour, canned beef and pickled pork held their own, while farm animals, corn, fresh beef, hams, oleomargarine, oilcake, fruits and nuts brought better returns than last year. During the past fiscal year the United States sold to the English-speaking people of Europe $406,000,000 worth of merchandise, which is 46 per cent. of our total exports; and bought from them $170,000,000 worth of goods, or 22 per cent. of the total imports. All parts of the British empire, in all continents, bought from the United States $512,000,000 worth of goods, or 58 per cent. of the total exports. Of the more important countries that bought from the United States more than $500,000 worth of goods, Germany, Canada, Italy, British Australasia, British Africa, Japan, Russia and China showed marked gains in 1896 over 1893. One of the marked features of recent foreign trade statistics is the decline in our commerce with Cuba. The exports to that island from $24,000,000 in 1893, declined to $20,000,000 in 1894, and $13,000,000 in 1895, and amounted to only $7,500,000 in 1896. The imports from the island which were valued at $79,000,000 in 1893, shrank to $40,000,000 in 1896, or a little over half of the former amount.

An investigation was made by the Comptroller of the Currency as to the amount of different kinds of money held by the banking institutions of the country on July 1. In all, inquiries were made of 12,962 banking houses and trust companies and 77 clearing houses, covering all such institutions in all the states and territories and the District of Columbia. The total cash held by the institutions which reported amounted to $413,124,849, of which $189,558,341, consisted of gold and gold certificates. This, however, does not represent all the gold held by the banks throughout the country. According to the comptroller the total gold and gold certificate holdings of all the banks of the country on July 1 was $302,793,367. A comparison of the money holdings of geographical districts shows that the 829 reporting banks in the New England states held but $6,602,671 more total cash and $5,845,588 more of gold and gold certificates than the 676 reporting banks in the southern states'; the 1,275 banks in the eastern states, $103,544,924 more total cash and $32,169,706 more of gold and gold certificates than the 2,444 banks in the western states; the 676 banks in the southern states, $3,451,841 more total cash and $10,047,647 less gold and gold certificates than the 509 banks in the Pacific states and territories; the 829 banks in the New England states, $10,054,510 more cash and $4,202,062 less gold and gold certificates than the 509 banks in the Pacific states and territories.

A feature of the week has been the return to the United States, after a three months' tour, of a number of American manufacturers who sailed from New York in July, bound for South America, to study the possibilities of Brazil, Argentina and several other countries as a field for the extension of American commerce. Press reports from time to time have called attention to the progress of these wideawake Americans through the countries visited. Mr. Fishbach, who represented the State Department on the trip, states that the trip was almost one continuous ovation to the American visitors, who have returned pleased and sanguine as to the good results to follow. The results of the trip will be made public later. Mr. E. S. Bacon, one of the party, of the Bacon Manufacturing Company, of Erie, Pa., who went as a delegate from the Erie Board of Trade, died at Rio Janeiro, August 31.

Commissioner of Indian Affairs Browning says, in his annual report, that with no outbreaks during the year the education and civilizing of the Indians have progressed, and the main effort now is, and for years must be, to get the Indian on his allotment so as to become self-supporting. The Indians are becoming adepts in handicrafts, and received last year in pay from the government over half a million dollars for work done. The commissioner reviews the step taken by Congress to extinguish the claim of the Ogden Land Company to the lands of the Senecas in New York state. The question of the fishery rights of the Yakima Indians, in the extreme northwest, is still troublesome, because of the infringements by the whites upon Indian rights, which have not been successfully protected. Education of Indians has progressed rapidly in the government and industrial training schools. There were enrolled in all schools 23,352 pupils. The commissioner praises the work of the field matrons. He suggests that the commission appointed to treat with several tribes of Indians for their lands be continued to clear up the work of making sales of land and the execution of deeds. Nearly all applications for Indians for exhibition purposes have been refused.

Abroad, interest continues to center in the situation in the East, and even the Czar's French visit, the spectacular event of the week, has been viewed largely in the light of its bearings upon conditions on the Bosphorus. Some interest was excited by the announcement that the Turkish government, after weighing the matter over and consulting with certain advisers, had come to the decision not to admit the United States gunboat Bancroft through the Dardanelles, and had also decided not to admit the guardships of Greece and Holland. It is generally supposed that the decision of the Turkish government was inspired by that of Russia, and it is understood that the ground of the latter's objection was based upon treaty arrangements, which exclude from naval representation in the Bosphorus any powers not parties thereto. It does not appear, however, that the United States had not made any request for passage through the Dardanelles. In Great Britain the springing of the Armenian question has been responsible for the retirement of Lord Rosebery from the leadership of the Liberal party, because of his disagreement with the policy championed by Mr. Gladstone.

RENEWED GOLD IMPORTATIONS.

Incoming European steamers continue to bring gold to this country. The total gold imports at New York during the week were $400,000, and the aggregate since the movement began at the close of last August has been $39,700,000. Added to this sum is the amount brought in at the ports of Boston and San Francisco, which raised the total of the present gold inflow to fully $46,000,000. This week's receipts, of course, represent engagements made some time previous, there having been no arrangements to bring in specie for the ten days or so during which exchange rates were above the gold importing point. The rally in exchange was regarded as a natural reaction from the preceding extreme depression, reinforced by the decline of interest rates here and their advance in London in pursuance of the efforts of the Bank of England to curb the outflow of its specie in this direction. At the same time the easier condition of our money market naturally caused some increase in the inquiry for exchange from merchants and others who had payments to make on the other side of the ocean. The maturity of considerable sterling loans made for short periods a little over a month ago was also a factor of no inconsiderable importance, as it is understood that in many cases these obligations were paid off. It may also be pointed out that the supply of commercial bills in connection with foreign purchases of grain and cotton showed a temporary but marked dimunition. These combined causes, however, were not permanent, and the exchange market during the present week has again given way, the rate for demand sterling, which, at the close of last week, was 4.85½, is now down to 4.83¾, and the fact that since Wednesday no less than $4,350,000 in gold has been engaged in London for shipment to this country would seem to mark the beginning of a second chapter in the gold importing movement of the present autumn.

In its general bearings the exchange market is unaltered from what it was during the progress of the earlier shipments to this country. There is, however, one circumstance connected with the demand for gold which has assumed increased importance in the past week, and which may have its effect in accelerating transfers of specie from Europe to our shores. Any attempt to give an ominous cast to the reappearance of a demand for gold for the purpose of hoarding or to the fact that in some instances a percentage has been paid for the right to call gold during a definite period would seem to be unnecessary. During the whole period that has elapsed since the adoption of the free silver platform at Chicago there has been considerable demand for gold for hoarding purposes. Its acute stage, however, passed as soon as the inflow of gold from Europe began, and the government reserve rose from $101,000,000 to over $110,000,000. Withdrawals from the Treasury have virtually ceased, and the deposit of portions of the gold received from Europe in exchange for legal tenders has now brought the government's holdings of specie up to over $124,500,000. Even these deposits in the Treasury, however, leave some $20,000,000 of the gold received from abroad unaccounted for, except upon the hypothesis that it was brought over for, or has since passed into the hands of, institutions or others who wish to accumulate gold against the contingencies involved in the present contest at the polls. It is also stated that considerable specie has been called for by individuals, a great deal of it in trifling amounts, and among the incidents of the situation is the existence of a certain demand from foreign-born citizens for the gold coinage of their respective countries. During the present week, however, a demand of a much larger character seems to have made its appearance, and it is understood that transactions in "free" gold in fairly large amounts have been made at premiums ranging from one-quarter per cent. down to a small fraction. It is also alleged that the greater part of this demand comes from the portions of the country where free silver sentiment is most pronounced. Reference has already been made to the fact that calls on gold have been in request, and that dealings of this character on a fairly large scale are said to have taken place. In such instances, so far as they can be traced, it is freely admitted that the interests making them are large ones, which have a great deal at stake in the event of a free-silver victory. The purchase of the right to call gold during a period, say sixty to ninety days, is regarded by them as a matter of insurance, and it is understood that the expense of procuring such privileges is charged to insurance account.

The gratifying feature of the somewhat more active request for gold is that it has been unaccompanied by any apparent effort to draw on the replenished Treasury reserve. At the same time, the premium or commission paid for specie is effective in increasing the inflow of gold, as it enables banking houses to bring it from Europe at a slightly-higher level of exchange than would otherwise be the case.

GROSS RAILWAY EARNINGS.

Gross railway earnings for September, as was to be expected, make a slightly better showing than those for August. A slight decrease is reported for the month just closed, it is true, but this decrease, owing to the early date of publication, is based upon returns from a smaller than usual number of companies. With fuller returns it is safe to say the small decrease reported may be still further reduced.

Total earnings of 112 companies for the month of September, operating 88,000 miles of road, aggregate $39,918,591, a decrease of seven-tenths of 1 per cent. from the total for September a year ago, against a decrease in August, 1896, of 2.4 per cent. on a larger mileage.

The decrease in August was the first reported in any month for more than a year, and the smaller falling off for September is none the less encouraging on that account.

The increases and decreases shown in each month for the past three years make the following comparison with the month of September:

	1895.	1894.	1893.
October	Inc. 6.8	Dec. 3.1	Dec. 2.1
Ten months	Inc. 4.7	Dec. 12.2	Inc. 1.0
November	Inc. 6.3	Dec. 1.4	Dec. 6.6
Eleven months	Inc. 4.8	Dec. 10.9	Dec. 1.5
December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	**1895.**	**1894.**
January	Inc. 11.3	Dec. .5	Dec. 12.0
February	Inc. 13.7	Dec. 2.3	Dec. 12.0

The best showings made are, as to be expected, in the south and southwest, owing to the early and heavy movement of cotton. Aside from a small increase in the coal road group and an increase on the trunk lines, due to a heavy gain on the main line of the Grand Trunk road, the others of the American roads show decreases of varying amounts, as will be seen from the following table, which shows the gains or losses in September and the nine months' period this year as compared with last, by groups of roads, compared with similar returns for the three preceding months:

	June, 1896.	*July,* 1896.	*August,* 1896.	*Sept.,* 1896.	*Nine mos.* 1896.
Grangers	Inc. 15.8	Inc. 11.6	Inc. .5	Dec. 3.2	Inc. 10.8

Southwestern	Dec. 2.4	Inc. 5.2	Dec. .4	Inc. 7.1	Inc. .5
Pacific	Inc. 13.7	Inc. 8.5	Inc. 2.3	Dec. 11.6	Inc. 8.2
Totals, U. S.	Inc. 7.3	Inc. 4.0	Dec. 2.9	Dec. 1.4	Inc. 4.5
Mexican	Inc. 2.3	Inc. 10.8	Inc. 9.1	Inc. 22.0	Inc. 6.6
Totals	Inc. 7.1	Inc. 4.1	Dec. 2.4	Dec. .7	Inc. 4.6

The heaviest gain in any group is that reported by the Mexican roads, 22 per cent. Among American companies gains reported are these: 7.1 per cent. for the southwesterns, 5.4 per cent. in the south, 2.5 per cent. for the coal roads and 2.5 per cent. for the trunk lines. Decreases include a falling off of 11.6 per cent. on the Pacific roads, 8.6 per cent. on the central western roads, and 3.2 per cent. for the granger group.

When the detailed figures are examined the showing is slightly more encouraging than that of August, as nearly 40 per cent. of the companies show increases, against only 30 per cent. in August. But the large decreases more than counterbalance large gains, as will be seen from the following table:

	Increase.		*Decrease.*
Great Northern	$76,340	Bur. Ced. Rap. & Nor.	$78,716
Grand Trunk	146,276	Chic., Mil. & St. P.	204,112
Norfolk & Western	71,060	Chic., R. I. & Pac.	67,411
Internat. & Gt. Nor.	91,300	Cin., N. O. & T. P.	57,600
Mo., Kan. & Tex.	151,535	Mo. Pac. & Iron M'n.	80,000
Texas & Pacific	100,358	Northern Pacific	431,556
Mexican Central	101,167	Balt. & Ohio S. W.	89,428
Mexican National	116,338	C., C., C. & St. L.	132,250
Mexican Railway	63,904	Wabash	55,528
		Pitts. & West.	71,515
Total	$918,278	Total	$1,275,752

The heaviest single decrease is that reported of the Northern Pacific, while the largest gain is that by the Missouri, Kansas & Texas.

For nine months total gross earnings of 113 companies, with 88,000 miles of track, aggregate $324,895,058, an increase of 4.6 per cent. over the corresponding period of 1895, in which year, it will be seen, earnings of leading roads gained 4.5 per cent. over 1894.

FARMERS AND THE PRICE OF WHEAT.

A correspondent of BRADSTREET'S has sent a copy of the Columbia (Indiana) *Herald* of September 29, containing a summary of a speech by Governor Altgeld in reply to the address of the Hon. Carl Schurz, at Chicago, in which he discussed the causes of the fall of prices of farm products.

If Governor Altgeld had delayed his speech two weeks he probably would not have made it at all. The advance in quotations for wheat throughout the world, particularly since he made the speech, proves a timely exposure of the fallacy of the free-silver claim that the price of wheat goes up and down with the price of silver.

The summary of the speech, which is of the "plate-matter" variety sent to country newspapers, claims that gold standard advocates ignore the appreciation in the value of gold when they claim that a decline in prices of farm staples and products is due to excess of production. This is merely a trick in form of expression. It is conceivable that the value of gold may and does change, but to those who remain amenable to reason it is an easy matter to show that the value of gold during the past fifty years, based upon supply and demand, has been far more nearly steady than the value of silver, which has gone on increasing in output tremendously in excess of the demand for silver for coinage and for use in the industrial arts. When these facts are appreciated, and they may be ascertained to be facts by reference to reports of the Director of the Mint and other authorities, less will be said about the "appreciation of the value of gold." Governor Altgeld is quoted as saying the farmers know that prices of horses have not been reduced owing to overproduction of horses, which is probably true, as the total number of horses on farms throughout the country has declined in recent years. The introduction of the trolley car and the cable car into all the larger and many of the smaller cities of the country, not to refer to the use of many hundred thousand bicycles, will go far to explain the falling off in what has been called the normal demand for horses. The speech was also made to claim that the farmer knows that wheat has not brought him lower prices at the mill this year because of overproduction, and that the sound money orator fails to produce figures to show there has been an overproduction of the world's wheat and lower prices due thereto.

As a matter of fact, the average price of wheat in the United States in 1895–96 was nearly 1c. a bushel higher than in the preceding year, prior to the recent advance. This is a matter of official record at the Agricultural Department, and now that wheat has advanced more than 10c. a bushel it is presumed no necessity exists for answering this argument at all. The sound money orator does and has given figures to show the increase in the production of wheat in recent years. Whether that increase constitutes "overproduction" or not is best shown by the effect of that increase in production on the price of wheat. The effect has been a marked decline in quotations. The enormously increased exports of Russia, of India and of Argentina to European wheat importing countries in late years meant practically just so much competition for the wheat-growers of the United States to contend with. As the United States produces more wheat than it consumes at home, and as the surplus wheat so produced goes abroad in competition with foreign-grown wheats, it is that surplus domestic wheat which must make the price of the entire home crop.

The condenser of the speech added that Governor Altgeld supplied figures to show there is no overproduction of wheat in the world, or in this country; that the production is less than for several years past, and hence the population and the consumption of wheat is increasing. If one may judge from the price of wheat since the governor made that statement, he probably regrets, from a political point of view, at least, having ventured to invoke higher prices to prove his argument. He cried wolf, and to his probable disgust the wolf is here. Higher prices, for reasons admitted in his speech, promise to remain, notwithstanding the continued decrease in the price of silver.

The allegation that "the continued increase in production of a given article does not produce a fall in price, provided there is an equal or corresponding increase in consumption," possesses the truth and innocence of the statement that two and two make four.

When the statement is made that there has been scarcely any improvement in machinery for raising and harvesting wheat in the last twenty years, the enormous reduction in steamship, and particularly in railway and other transportation rates, is lost sight of. That constitutes one of the most important pieces of "machinery" affecting the price of wheat. The peroration of the speech appears to base itself upon the charge that the world's production of wheat this year is 120,000,000 bushels smaller than last year, and is smaller than for several years, yet "wheat is lower than before." Unfortunately for the speech, while one may admit the comparative accuracy of his statement regarding the size of the world's wheat crop, wheat, at the time he spoke, was not lower than before; it had averaged for the year 1c. per bushel higher than for the previous year, and since he spoke it has advanced about 10c. per bushel further. The causes of this advance are such as to point to the probability of a higher range of values for wheat due to decreased supplies throughout the world, and to the increasing consumptive demand. Thus it is that the laws of trade, of supply and demand, have intervened to disprove the argument of the governor of Illinois.

A HEAVY INCREASE IN CIRCULATION.

Treasury statistics of circulation show a heavy net increase for the month of September, an increase amounting to $43,132,655. The increases comprised gains of $14,775,521 in gold coin, $3,067,297 in standard silver dollars, $528,831 in subsidiary silver, $8,691,580 in silver certificates, $17,582,566 in United States notes, and $5,006,337 in national bank notes. The decreases included $131,000 in gold certificates, $2,298,477 in Treasury notes of 1890, and $4,090,000 in currency certificates. The statistics exhibiting the changes in money and bullion in the Treasury show a net increase of $1,941,290. The increases included $15,211,623 in gold coin, $561,477 in Treasury notes of 1890, and $7,734,488 in gold bullion. The decreases comprised $367,197 in standard silver dollars, $783,318 in subsidiary silver, $17,582,566 in United States notes, $980,876 in national bank notes, and $1,852,341 in silver bullion.

The following table sets forth in detail the amounts of the different kinds of money coined or issued in the Treasury and in circulation on October 1:

	General stock, coined or issued.	In Treasury.	Amount in circulation Oct. 1, 1896.
Gold coin	$600,544,227	$121,772,737	$478,771,490
Standard silver dollars	437,202,141	380,688,963	56,513,178
Subsidiary silver	75,354,781	15,126,483	60,228,298
Gold certificates	40,328,539	1,591,900	38,736,639
Silver certificates	364,476,504	10,045,030	354,431,474
Treas'y notes, act July 14, 1890	125,004,280	36,040,233	88,964,047
United States notes	346,681,016	97,133,716	249,547,300
Currency certificates, act June 8, 1872	34,715,000	410,000	34,305,000
National bank notes	233,639,357	12,834,494	220,804,863
Totals	$2,237,945,845	$675,613,556	$1,582,302,289

As compared with the corresponding date last year there was an increase of over $8,800,000 in the amount of gold coin in circulation, while the standard silver dollars show an increase of a little less than $1,500,000. Silver certificates show an increase of nearly $14,000,000, United States notes show an increase of nearly $9,200,000, and national bank notes show an increase of nearly $14,000,000. On the other hand, the subsidiary silver in circulation shows a decrease of nearly $1,200,000, gold certificates show a decrease of over $11,900,000, and Treasury notes one of over $18,000,000, while currency certificates show a decrease of over $29,500,000.

The total volume of money in circulation on October 1 amounted to $1,582,302,289, which represents a decrease of over $3,200,000 as compared with the corresponding date last year. The population of the United States, on the 1st inst., is estimated by the Treasury experts at 71,774,000. On the basis of these figures the circulation per capita is put by them at $22.05. This represents an increase of 57c. for the month, but a decrease of 52c. as compared with the corresponding date last year.

THE END OF THE SOUTHERN RATE WAR.

The southern rate war has been settled in a somewhat dramatic way. On Wednesday last the announcement was made that General Samuel Thomas and Mr. Thomas F. Ryan, of New York, heading a syndicate, had secured a controlling interest in the Seaboard & Roanoke Railroad Company. The latter corporation owns or leases the other properties composing the Seaboard Air Line, and the purchase therefore comprehends the entire Seaboard system of roads. The gentlemen interested in the transaction are closely connected with the Southern Railway, and the deal is in the interest of that corporation, though it is announced that the Seaboard will be operated as an independent concern in all respects.

Such a denouement of the fight between the Southern Railway and the Seaboard Air Line was not considered unlikely, but the manner in which it was effected and the time at which the deal was announced created surprise. Only a week ago Mr. John Gill, of the Mercantile Trust Company of Baltimore, addressed a circular to the owners of Seaboard & Roanoke stock, offering $100 a share for their holdings, and criticising the present management of the Air Line system in a severe way, the circular, among other things, pointing out that the stock of the company had been reduced in the market to a value of about $45 per share. A vigorous reply was made to this by President Hoffman, of the Seaboard, and as the annual meeting of the Seaboard & Roanoke was held only a few days ago, a conflict for control was expected. To the surprise of the public no contest occurred, and the reëlection of President Hoffman was proposed by the representatives of the opposition. The facts narrated in the first paragraph above give, however, the explanation of this action. The purchase of control by the syndicate, it seems, was totally unexpected by the management and its supporters. It was effected by the purchase of a large block of the stock that had been pooled by Baltimore and Philadelphia interests, the total amount thus acquired being over 4,000 shares, and it is also understood that the syndicate paid over $100 per share for a considerable portion of this stock. As the payments have not been completed, and transfer of the shares will not be made till it is done, the Hoffman management is to remain undisturbed for the present, though the statement is made that a complete change is to be effected later on.

A further interesting fact in this connection is that the same syndicate which has bought control of the Seaboard Air Line has also obtained possession of the Port Royal & Augusta and the Port Royal & Western Carolina. The latter lines formed part of the Central of Georgia system. They will be reorganized as the Charleston & Western Carolina and will become part of the same system as the Seaboard Air Line under its new control.

The deal just explained is one of the most important that has recently taken place in railroad circles. It puts the virtual control of the entire southern rate situation in the hands of the Louisville & Nashville and the Southern Railway companies.

THE WORLD'S WHEAT SUPPLIES.

Totals of stocks of wheat available, both coasts of the United States, together with those in Canada, on October 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	Pacific coast.	Totals.
October 1, 1896	63,955,000	5,454,000	69,409,000
October 1, 1895	55,078,000	9,760,000	64,838,000
October 1, 1894	92,100,000	9,074,000	101,174,000
October 1, 1893	71,108,000	7,102,000	78,270,000
October 1, 1892	59,845,000	8,153,000	67,998,000
October 1, 1891	36,577,000	9,517,000	46,094,000
October 1, 1890	27,976,000	6,705,000	34,681,000
October 1, 1889	26,734,000	9,514,000	36,248,000

Owing to the recent heavy movement of wheat to primary markets this year, stimulated in part by higher quotations, total available stocks of wheat in the United States and Canada are seen to amount to about 4,500,000 bushels more than on October 1 one year ago. But as compared with October 1 two years ago, available

stocks were 31,700,000 bushels smaller on the 1st inst., and as contrasted with accumulations in sight on October 1, 1893, stocks at the beginning of the month were 8,700,000 bushels smaller. As compared with the corresponding accumulations four years ago, the total on October 1, 1896, is 1,400,000 bushels larger, and materially larger than corresponding totals of available wheat reported on October 1 in years prior to 1892.

The total quantities of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantities afloat for Europe from all exporting countries, on October 1, added to available stocks in Europe, as reported to BRADSTREET'S, are as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
October 1, 1896...	63,955,000	5,454,000	46,200,000	115,609,000
October 1, 1895...	55,078,000	9,760,000	64,952,000	129,790,000
October 1, 1894...	92,100,000	9,074,000	61,032,000	162,206,000
October 1, 1893...	71,108,000	7,162,000	79,920,000	158,190,000
October 1, 1892...	59,845,000	8,153,000	63,664,000	131,663,000
October 1, 1891...	36,577,000	9,517,000	65,320,000	111,414,000
October 1, 1890...	27,976,000	6,705,000	48,767,000	81,885,000
October 1, 1889...	26,734,000	9,514,000	44,745,000	80,984,000

When supplies of wheat afloat for and in Europe are added to available stocks in the United States and Canada, both coasts, the total for October 1, 1896, is 115,609,000 bushels, which is less than corresponding aggregates at like dates in four preceding years, but slightly larger than that on October 1, 1891. This exhibit is rather more bullish than that of total wheat stocks in the United States and Canada alone, and is due to the relatively heavier falling off of stocks of wheat afloat for and in Europe than in the United States and Canada. This is indicated by a grand total of only 46,200,000 bushels of wheat afloat for and in Europe on October 1 this year, which is less than that similarly reported at a like period since 1889.

The heavy movement of domestic wheat this year did not begin in time to make the September increase of available stocks as large as it was a year ago, or two years ago, last month's gain in domestic and Canadian supplies amounting to only 6,367,000 bushels, a little more than half the September increase one and two years ago, and slightly less than the September increase in 1893. On the Pacific coast the net gain in stocks of wheat available last month was twice as large as in September, 1895, and nearly four times as large as that in September, 1894. For both coasts, therefore, the September total of available wheat stocks, United States and Canada, shows a net gain of only 8,309,000 bushels, compared with 11,307,000 bushels one year ago, 12,816,000 bushels two years ago, but as contrasted with 7,813,000 bushels in September, 1893.

Consolidating net increases and decreases of available stocks of wheat in the United States and Canada during the first three months of the current cereal year, the net gain is found to be 6,128,000 bushels, as compared with 4,630,000 bushels in July, August and September, 1895, and with 27,571,000 bushels in the like portion of 1894, 20,018,000 bushels in 1893, and 35,907,000 bushels in July, August and September, 1892. The net gain during the past three months of about one-third more than in the like three months of 1895 is explained by the relatively heavy increase of domestic wheat stocks in July, 1895—nearly 6,600,000 bushels. But as compared with July, August and September increases in 1894 and in the two preceding years, the past quarter's increase of available wheat in the United States and Canada is seen to amount to, respectively, only one-quarter, one-third and one-sixth as much.

European importing countries were evidently purchasing more heavily, and exports to Europe were evidently made more freely during September, 1896, than anticipated, or than was the case in several preceding Septembers. This is indicated by the unusually heavy gain in American, Canadian, afloat and European stocks last month, 18,600,000 bushels, as compared with only 10,300,000 bushels in 1895, 10,600,000 bushels in 1894, and 8,700,000 bushels in 1893. The net gain in American and Canadian stocks last month was about 8,300,000 bushels, from which the inference is plain that stocks of wheat afloat for and in Europe must have increased last month more than 10,000,000 bushels. As compared with September in 1892 and in 1891, the gain of 18,600,000 bushels in American, Canadian, afloat and European stocks of wheat is not excessive, for the increases in those years were, respectively, 20,600,000 and 24,600,000 bushels, while in September, 1890, the increase was 12,700,000 bushels.

Adding the total quantity of wheat available in Australia, as cabled to BRADSTREET'S, it is found that the American, Canadian, afloat for Europe and European and Australian stocks on October 1, 1896, aggregated 116,809,000 bushels, against 131,340,000 bushels one year ago, 163,206,000 bushels two years ago, and 133,962,000 bushels on July 1, 1893.

WHEAT STOCKS IN THE UNITED STATES, CANADA, EUROPE, AFLOAT FOR EUROPE AND IN AUSTRALIA.

[By wire and cable to BRADSTREET'S.]

	United States and Canada.	*Europe and afloat.*	*Australia.*	*Grand totals.*
Oct. 1, 1896.....	69,409,000	46,200,000	1,200,000	116,809,000

* Decrease. † Increase.

THE WESTERN RATE SITUATION.

Last week's indications were that western railroad interests would lose no time in adjusting the serious condition into which rates throughout the territory west of Chicago have drifted. The disruption of the Western Freight Association, referred to in these columns, rendered such action necessary, and, while some time would elapse before the formal notices of withdrawal served by the Rock Island and other roads became effective, the association and its usefulness were both practically defunct. That such a state of affairs would be allowed to continue on the eve of an enormous freight movement was, of course, preposterous. It is not surprising to hear that in some cases the chief executive officials of granger railroad companies have taken the matter of straightening out the rate complications from the hands of the subordinate officials and are giving their personal attention to the task. The calling of a meeting at Chicago was the next step, and, according to all accounts, it is the avowed intention of the representatives of the various roads to continue in session till a satisfactory arrangement has been arrived at. A new method of securing permanency in the new compact has been under discussion. It is simply the adoption by the roads which desire to maintain rates of appealing to the Interstate Commerce Commission where cuts and irregularities on the part of competitors are discovered instead of making instant reprisals of the same nature, and thus in all cases extending the disturbance of tariffs still further.

Western railroad men, it may be remarked, have not been favorably impressed with the idea of organizing an association on the lines adopted by the eastern roads for the Joint Traffic Association. The fact that the latter body has worked well, and that since the agreement went into effect, on January 1 last, there has been a marked decrease in unnecessary lowering of competitive rates, has, of course, appealed strongly to the minds of eastern owners of the stocks of western roads. At the same time it must be admitted that the claim advanced by the practical railroad operators of the west, that the conditions surrounding the lines of their section, the nature of their traffic and the competition to which they are subjected make the hard and fast principles which the trunk lines have adopted with a measurable success entirely inapplicable to the granger roads. It is unnecessary to enter into the detailed objections to the Joint Traffic plan, but one feature of the latter is that its machinery, while effective, is too cumbersome for the west, where quick action by the central authority of a railroad association is an absolute necessity.

The apparent intention of the roads west of Chicago to go to the level of a year ago is, however, a favorable move at this moment, when the crop movement is in full swing. Of course it requires ten days' notice to restore rates, and in the interim shippers of grain will doubtless take advantage of the low charges. Nor, when the subject is considered, is it safe to leave out of consideration the competition of the Gulf of Mexico and the diversion of grain freight to gulf ports, which under any circumstances will make the maintenance of railroad rates at the west a matter of extreme difficulty.

FREE SILVER AND WAGES.

In the course of the present campaign no argument has been made to do more service by the supporters of the Chicago platform than the plea that the condition of the laboring man would be benefited in some way by free coinage, and as the campaign has progressed this argument has been made to do more and more service. It has been well refuted in general terms by the sound money advocates, who have stated with force and accuracy the economic conclusions which are at variance with the theory of the free coinage people. There was room, however, for a presentation from the scientific standpoint and upon the basis

of economic evidence of the doctrine which makes against the free coinage theory. The most instructive and convincing presentation of this kind which has come to our notice is contained in an article in the September number of the *Political Science Quarterly*. It is from the pen of Professor Richmond M. Smith, of Columbia University, whose standing as an economist and statistician is well known, not only here, but abroad.

Professor Smith begins with a recognition of the idea that the proposal to begin the free coinage of silver at the ratio of 16 to 1 must be tested largely by the effect it is likely to have on the laboring man, and he follows this with the declaration that political economy teaches beyond a doubt that both the direct and indirect consequences of the free coinage of silver would be disastrous to labor.

Touching the direst consequences of the free coinage of silver to the laborer, he presents the thesis that such coinage would raise prices and that prices would go up faster than wages, thus making the laborer suffer from the increased cost of living. He regards it as scarcely necessary to argue the first point, for the reason that the very object of free coinage is to restore prices, this being what is promised to the farmer, the debtor and the business man. The whole basis of scientific bimetalliam, if it have any scientific basis, is, he says, that the tendency for decreasing prices is discouraging to all business, and that the restoration of silver would stop the fall and possibly lead to a gradual inflation which would be favorable to business. Free coinage of silver, it is insisted, would lead to higher prices, not so much by the inflation of the currency as by the reduction of the standard to the bullion value of the 412.5 grain silver dollar, for if that value expressed in gold remained at 53c., prices would be almost doubled. As regards the assertion of the supporters of the Chicago platform that free coinage would restore silver from 69c. an ounce to $1.29 or would reduce the value of gold so that the ratio would again be 16 to 1, Professor Smith declares that it is utterly absurd, and he points out that the supply of silver has been increasing while the price per ounce has been falling. He asks, now, if this supply increases, notwithstanding the decrease in price, what would be the supply with an increase in price? The object of the silver mine owners, that is, to make profitable the present unprofitable mines, would be attained and the supply of silver would be increased, but this very increase would stimulate production so that the supply would soon again be excessive.

Of more immediate interest for the purpose of present discussion is Professor Smith's examination of the second proposition, namely, that when prices rise wages also rise, but more slowly, so that, for the time being, the purchasing power of wages is less and the condition of the wage-earner is worse. This proposition the writer declares to rest upon undisputed historical evidence, and to be confirmed by common sense, or what we know of the nature of man. He directs attention to the period of the civil war, when prices rose on account of the irredeemable paper currency. The evidence as to the relation of prices and wages for the period from 1860 for thirty years or so is, of course, that collected in the celebrated Aldrich Senate report. The statistics are based upon the prices of 1860 as a standard. They show that after 1862 prices advanced very rapidly, reaching a maximum in 1865, the period of greatest inflation. Wages also advanced, but more slowly, so that their purchasing power decreased, reaching a minimum in 1865, when, although wages had increased nearly 50 per cent. in money, their purchasing power was only 78 per cent. of what it had been in 1860, and it was not until 1866 and 1867 that the laborer regained the position he had in 1860. The figures themselves show that, taking the prices and wages and the purchasing power of wages at 100 as a standard in 1860, while currency wages had risen to 148.6 in 1865 currency prices had risen to 190.7, whereas the purchasing power of the wages had fallen to 77.9.

It is pointed out that the statistics of wages given in the Aldrich report have been subjected to searching criticism abroad, particularly by Mr. A. S. Bowley, in a paper read before the British Association in September, 1895. After a test of the figures in four different years he could only discover a trifling difference from the figures given in the report. Professor Smith's conclusion from the statistics is that they bear out clearly the thesis that rising prices are disastrous to the working man because wages rise more slowly than the cost of living. As a matter of fact, economists have long been familiar with this law, that wages rise more slowly than prices, and many instances of its operations have been collected in the works of Professor Thorold Rogers, of Oxford, whose investigations into the history of prices and wages in Great Britain have become almost classic. The reason why prices rise faster than wages is stated as follows: The seller of goods can mark up prices with comparative ease, and is foresighted enough to do it the moment he apprehends that the money he is to receive will be of decreasing purchasing power. The working man, on the other hand, is obliged to wrest an advance from the employer, who is unwilling to increase his labor bill even as he has advanced prices. Moreover, it requires time for the working man to appreciate all that the increased cost of living means to him, and to bring about a union of forces sufficiently powerful to make a fight. It is true, on the other hand, that when prices are going down, as has been the case in the last two decades, the working man has the advantage, and the employer will not at once cut down wages but will economize in other directions, for the reason that reduction in wages may cause a strike, disorganization of his labor force, loss of business connections and inability to take advantage of turns in the tide. When prices are falling wages usually follow more slowly, but if the fall in prices is due to improved methods of production they need not fall at all. When prices rise or fall, in other words, the party adverse to a change in wages has the advantage. With rising prices it is the employer, with falling prices it is the employee.

Two other questions now occur here. Has the steady fall of prices since 1873 been to the advantage or the disadvantage of the laborer in the first place, and in the second place, is this fall due to a scarcity of gold or to improved methods of production? If the fall has been due to scarcity of production, wages will probably fall, although more slowly than prices or the cost of living; while if it is due to improved methods of production wages will remain stationary or increase while the cost of living is decreasing. The statistics given in the Aldrich report show that prices have decreased since 1873, while wages have increased since 1879. The figure given for currency prices in the report is 119.9, while the figure for 1891 for prices is 96.2. In 1879 again the figure for currency wages is given as 139.4, while in 1891 it was 168.6, and the purchasing power of wages increased from 138.5 in 1873 to 175.4 in 1891. The movement herein described has not been confined to the United States. Mr. Bowley, already referred to, who is the latest authority in England on wages, after an elaborate investigation of all accessible data came to the conclusion that real wages rose about 20 per cent. between 1860 and 1871–74, and that after 1880 money wages rose, with the exception of a check in 1886, still more rapidly. Taking the same period as that covered by the Aldrich report and the same trades as those covered therein the rise was 70 per cent., while including all trades the rise in real wages was 90 per cent. A similar conclusion has been reached by M. Hector Denis, who affirms that both wages and the standard of life of the laboring class have risen since 1873, and finally, General Walker, who stands at the head of American bimetallists, admits that since 1873 the laborer has received as large a share of the product of industry as he then did, or even more, though contending that this share has not been as large as it would have been if silver had not been demonetized in 1873.

Regarding the cause of the fall in prices since 1873, as has already been stated, there are two theories—one being that it is due to the scarcity of gold, or the increased demand for gold owing to the demonetization of silver, and the second being the improvement in methods of production and transportation. Readers of these columns are familiar with the masterly exposition of the second theory made by Mr. David A. Wells some years ago in a series of articles subsequently incorporated in a volume dealing with recent economic changes. It is pointed out by Professor Smith, without going into an exhaustive discussion of the question, that many bimetallists admit that at least part of the fall in prices has been due to improved methods of production, while recent events have done much to weaken the contention that low prices are due to a scarcity of gold. Professor Lexis, who has been styled by Gen. Walker "the first economic statistician in the world," has shown that the money supply of the world has been greatly increased during the period of falling prices. Germany, at the beginning of her currency reform, had 1,700,000,000 marks in specie, but now, while her population has increased only from 40,000,000 to 50,000,000, she has 3,380,000,000 marks. France, with a stationary population, has, since 1873, increased her specie in circulation by 1,500,000,000 francs. England, although her highly-developed credit system makes her need of currency less than that of continental states, from 1873 to 1892 imported 760,000,000 marks more gold than she exported. Of the United States, Lexis says that it increased its money supply from 1873 to 1892 to a degree such as has never happened in any other country, there being an increase of 4,626,000,000 marks in specie money or notes covered by specie, besides 250,000,000 marks in fractional currency, and, in a more recent article than that just referred to, the same authority declares that the claim that low prices are due to a scarcity of gold must now be given up, since it is contradicted by all the facts, the supply of gold having increased rapidly, while prices have continued to sink.

NEW YORK CENTRAL'S YEAR.

The results of the New York Central & Hudson River Railroad's operations for the year ending on June 30 last are not a novelty. The annual report of the company, which has just been issued in preliminary but sufficiently complete form, is, however, of decided interest. The figures which it presents for the twelve months ending with June of the present year compare as follows with those of 1895:

Year ending June 30.	1896.	1895.	*Changes.*
Gross earnings	$45,144,967	$42,489,537	Inc. $2,655,430
Operating expenses	30,455,570	28,810,443	Inc 1,645,127
Net earnings	$14,689,396	$13,679,093	Inc. $1,010,303
Charges	10,645,603	10,556,679	Inc. 88,924
Profit	$4,043,793	$3,122,413	Inc. $921,379
Dividends	4,000,000	4,339,990	Dec. 339,990
Surplus	$43,793	*$1,217,576	Inc. $1,261,369

* Deficit.

The increase in both gross and net earnings is sufficiently marked to attract attention, the gain in gross being divided between $1,716,000 from increased freight receipts and $739,908 from passengers. Pursuing the analysis further, it is shown that the improvement in freight traffic and receipts was the result of a larger tonnage, in the face of a decrease in rates. The total number of tons transported by the road during the year in question (exclusive of that carried for the company itself) was 22,123,617, an increase over the record of 1895 of 2,382,122 tons. The number of tons transported one mile and earning revenue was 3,874,532,962, a gain of 545,317,883 tons carried one mile. It is also to be noted that the through freight, which is given as 2,977,888 tons, shows a gain of 941,435 tons, while the total tonnage of way freight, 19,145,729 tons, presents an increase of 1,440,687 tons. In other words, through freight increased 40 per cent. and way freight only 8 per cent. This is a sufficient comment upon the character of the year's business, while it also explains the results as regards rates. These show that the average rate per ton per mile was 0.67c., against 0.73c. per ton per mile in 1895, a decrease of 0.06c. per ton per mile. The expenses, however, were slightly lower on a tonnage basis, having been ½c. per ton per mile in the year just ended, against 0.55c. per ton per mile in 1895, a reduction of 0.05c. per ton per mile. The profit per ton per mile was, accordingly, 0.17c. per ton per mile, against 0.18c. in 1895. The freight earnings per train mile are given for 1896 as $1.80, against $1.84 in 1895, and the profit per train mile this year as 0.45c., compared with 0.46c. in the preceding year. At the same time the gross earnings from freight per mile of road (2,392½ miles) in the twelve months was $10,850, compared with $10,143 last year, a gain of $707 per mile, and the freight profit per mile is $2,724, an increase of $218. In short, the statistics tell the story of greater freight density, though they would also point, so fas as they refer to the operation of the road by trains, to the probability that the New York Central has reached the maximum efficiency at which business under present conditions can be handled.

In regard to passenger traffic there is little to be said. The average rate per passenger per mile, 1.89c., is exactly the same as last year, and the profit on each mile traveled by the 23,906,000 passengers on the company's trains was 0.37c., an increase of 2/100c. per passenger per mile. The total passenger earnings per mile were $5,722, a gain of $303, and the net profit from passengers per mile of line, $1,131, was an increase of $117.

Returning to the aggregate figures for

the year, the road, it seems, was operated for 67.46 per cent. of the gross earnings, while in 1895 the percentage was 67.81 per cent., an improvement equal to a reduction of about one-third of 1 per cent. The profit remaining after payment of fixed charges was equal to 4.04 per cent. on the stock, against 3.25 per cent. in 1895, while in the last named fiscal year 4½ per cent. was paid in dividends, against 4 per cent. in the year now under consideration, the result being the small surplus of $43,793, against a deficit of $1,217,576 in 1895.

A SUCCESSFUL REORGANIZATION.

It is a matter for genuine congratulation when a railroad property that only a few years ago was in a chaotic condition is restored to complete solvency. As often noted in these columns, the reorganizers of bankrupt corporations have within late years acquired much greater skill in their work, and at the same time have learned by experience the necessity of conservatism. Formerly there was a great deal of trusting to luck in such arrangements. At present, however, the tendency, which, it must be admitted, is the wiser policy, is to build up from the poor conditions of the past rather than to impose a fresh mass of capitalization and depend upon future improvement in earnings for the power to sustain it. At the same time holders of railroad securities as a class display greater willingness to accept the sacrifices both in regard to the payment of contributions or assessments and the scaling down of principal and interest that is almost always necessary in such cases. It would be easy to point out instances where the principles just referred to have not been applied with sufficient rigor, and where, consequently, renewed bankruptcy and a further reorganization have been necessary. The drift, as already indicated, is, however, entirely away from such halfway measures, and the result, it may be expected, will be that even should the country encounter a period of acute depression like that of the last few years there will be no repetition of the enormous number of railroad bankruptcies lately exhibited.

The annual report of the Minneapolis & St. Louis road for the fiscal year ending June 30, 1896, is an example of the permanently successful reorganization, and affords material for comment upon the principles which underly all successful transactions of that character. While the system of roads comprising the corporation's property is not a trunk line, it includes no less than nearly 400 miles of main tracks, and supplies access for one of the leading western roads—the Rock Island—to such an important center as St. Paul. In fact, among the chief difficulties which were encountered in its financial reconstruction was the complication created by its financial dependence on the Rock Island, placing the latter in the position of a heavy creditor. Being heavily overcapitalized, an additional source of trouble was found in the unusual complexity of the funded debt, the mortgages to secure the bonds in some cases overlapping each other upon separate portions of its lines. Finally, the old corporation encountered the excessive rate cutting and unremunerative condition of railroad traffic in the northwest prior to and after the enactment of the Interstate Commerce law, its bankruptcy in 1888 being attributed directly to the difficult situation created by the law. The diversity of interests was so great that litigation among them ensued, and it was not till 1892 that the exhaustion of the various interests was complete enough, and their diverse rights sufficiently defined, to make the work of reorganization feasible. The task was undertaken by a strong committee, backed by the usual syndicate, and the severity of the plan is indicated by the fact that an assessment of $25 per share was levied upon the old stock, common and preferred, amounting together to over $11,000,000. The financial depression of 1893 delayed progress in the reorganization, but it was finally completed in the late autumn of 1894, and the new company entered into possession of the property, which had been foreclosed in October of that year. The report just presented is accordingly the first for a full year since the road was fully reorganized. The comparison of results for the past three years is as follows:

Year ending June 30.	1896.	1895.	1894.
Gross earnings	$2,028,300	$1,823,998	$1,708,870
Operating expenses	1,136,814	1,092,280	1,052,469
Net earnings	$891,485	$731,718	$656,411
Other income	144,048	106,482	157,202
Total income	$1,035,533	$836,200	$813,613
Fixed charges	703,752	457,631	959,727
Balance	$331,781	$381,169	*$146,114
Dividend	245,000	....	....
Surplus	$86,781	....	....

* Deficit.

The full dividend of 5 per cent. was thus earned upon the $2,500,000 1st preferred stock of the company, and the balance over the same was equal to 3 per cent. on the $4,000,000 of 2d preferred stock. The report, which is very complete in its details, shows that there is no floating debt. A further development in connection with the company's affairs is that at the annual meeting this week the members of the management representing the bondholders and bankers who had carried the reorganization to completion retired, leaving the road in the complete possession of its stockholders.

SILVER COINAGE UNDER PRESENT CONDITIONS.

In ordinary references to recent legislation regarding silver it is common to find statements speaking generally of "the repeal of the Sherman law," whereas only the clause of the law authorizing the purchase of silver has been repealed. These references have produced some misconception which a recent statement in a published communication from Secretary Carlisle should suffice to dissipate. In response to a question, Mr. Carlisle says that during the present year—that is, from January 1, 1896, to September 30, 1896—standard silver dollars have been coined at the mints of the United States to the amount of $13,912,512. Since November 1, 1893, the date of the repeal of the purchasing clause of the so-called Sherman act, standard dollars have been coined in the United States to the amount of $17,869,491, or more than twice as much as was coined during the whole period of our history prior to 1878. The coinage of standard silver dollars is going on every day at the mints, and during the last month it amounted to $2,700,000. About the same amount will be coined during the present month. The seigniorage or gain which has been added to the circulation on account of the coinage since November 1, 1893, is about $5,700,000, and the seigniorage or gain in the coinage of last month was about $900,000.

Secretary Carlisle points out that the coinage is being done under the authority conferred upon the Secretary of the Treasury by the third section of the act of July 14, 1890, commonly called the Sherman act, which provides that "the Secretary of the Treasury shall each month coin 2,000,000 ounces of silver bullion purchased under the provisions of this act into standard silver dollars until the first day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury." This law, Secretary Carlisle points out, is still in force, no part of the act having been repealed except the clause which directed the Secretary of the Treasury to continue the purchase of silver bullion and issue Treasury notes in payment for it, and the coinage is being made from the bullion belonging to the government, purchased before the repeal of that clause. The silver dollars coined, other than the seigniorage, are held in the Treasury under the law for the redemption of the Treasury notes issued in payment for the bullion, and since August 1, 1893, these notes have been redeemed in silver to the amount of $31,126,722, and the notes have been retired and canceled, the silver dollar taking their place in the circulation. Prior to August, 1893, none of these notes had been redeemed in silver or retired.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

With the exception of two years ago, the cranberry crop of 1896 is the smallest in the past eleven years, and is only half that of the crop of 1893, New Jersey's crop being almost a failure. Investigation by the *American Agriculturist* indicates a total crop of a little more than 500,000 bushels, compared with 640,000 in 1895, 410,000 in 1894 and 1,000,000 bushels in 1893. The loss in yield is almost altogether in New Jersey. The west has secured a better crop than in 1895, although small compared with former years, while New England will furnish the bulk of merchantable berries. The outlook is for a yield of cranberries in New Jersey of less than 90,000 bushels, compared with 210,000 in 1895, and an average of more than 200,000 bushels for a series of years. The crop in New England is good but not large. The probable New England crop in 1896 is 380,000 bushels, compared with 420,000 bushels one year ago, 185,000 two years ago, 575,000 in the large crop year 1893, 375,000 in 1892, and 480,000 in 1891. The unimportant crop on Long Island shows a relative shortage.

CURRENT BUSINESS NEWS.

Industrial.

The *Iron Age* reports a decrease in the weekly capacity of blast furnaces of 18,000 tons on September 1 from the capacity August 1.

The Plumbers' Association, in Milwaukee, on Saturday, elected William P. Redmond, of Chicago, national president, and M. J. Gounahan, of Pittsburgh, secretary and treasurer.

President William Chisholm, of the Cleveland Rolling Mill Company, denies the report sent out from there that the mills had closed down, throwing 4,500 men out of employment. The mills are running, but with reduced force.

Southern textile industries report increasing activity and but few idle spindles.

The New York News Bureau claims trustworthy information that Arbuckle Brothers, coffee dealers, "have decided to build a sugar refinery of large size and enter into active competition in the sugar trade with the American Sugar Refining Company."

The plant of the Valley Mill, at Youngstown, Ohio, which has undergone some improvements and reorganization, has started up in full. The blast furnace and little bar mill will soon resume.

Nearly seven hundred buyers attended the auction sale of silks held in New York city this week. The goods were the output of a Paterson, N. J., firm, and consisted of 7,100 pieces. The silks were of the most seasonable styles, and there was not an undesirable piece in the entire lot. The stock was estimated to be worth $350,000 or upward.

It was stated October 7 at the office of the Cambria Iron Company, in Philadelphia, that the company's plant, at Johnstown, which shut down to-day, will resume on Monday. "The temporary suspension was due to preparations in connection with adjusting machinery and matters incident to the operating department and not to trade conditions."

The Chattanooga *Tradesman* says: "The final test of the Hawkins process of steel-making from Alabama iron has been made at the plant of the Jefferson Steel Manufacturing Company, at North Birmingham, and was entirely satisfactory. The result will be the changing of the Jefferson Company's plant into a steel mill at no distant date."

The Everett Mills, at Lawrence, Mass., have started up, giving work to 1,300 persons. The mills had been shut down since July 30. Several departments of the Arlington Mills also resumed operations, giving work to 3,000 of the 3,500 employees.

The York Mills, at Saco, Maine, which have been idle for three months, have resumed operations. A slight reduction in wages was announced.

The weavers in the Stevens Mill, at Fall River, Mass., have struck as the result of a readjustment of the wages schedule, which reduced their pay about 4 per cent.

Commercial.

Wheat continues to advance and silver to decline. Since September 1 wheat has advanced about 10c. and silver has declined over 1c.

Threshing returns from all winter and spring wheat states enable *American Agriculturist* to report the total 1896 crop wheat in the United States at 470,000,000 bushels, against 460,000,000 last year.

The oats crop of 1896, according to *American Agriculturist's* report, makes the total crop 717,250,000 bushels, against 904,000,000 bushels in 1895. The average yield per acre is 23.6 bushels. The general quality "is perhaps the worst on record."

The harbormaster at Tacoma makes the following report concerning the ocean commerce at that port for the month of September, 1896: Imports consisted of cargoes from China and Japan valued at $350,855, which, together with a total of $2,522,599, previously reported, makes a total of $2,873,454 for the past nine months. Exports included merchandise to China and Japan valued at $257,052; merchandise to British Columbia, $46,281; 33,732 tons of coal to San Francisco, $101,196; 4,994,129 feet of lumber to Australia, $41,655; 1,133,183 feet of lumber to Africa and China, $9,780; 1,470,000 feet of lumber to Central America, $13,153; 1,350,000 feet of lumber to San Francisco, $10,880; making a total for the month of September of $479,997, which, with $4,251,395 previously reported, makes a total for nine months of $4,731,392, compared with $3,239,961 during the same period of 1895.

The *Journal of Commerce* says: "Wheat, including flour, exported since July 1 has amounted to 44,314,587 bushels, against 29,879,469 last year. The corn exported has been 27,689,015, against 15,138,384 bushels last year; and the barley, oats and rye exported in July and August alone amounted to 12,832,209, against 1,585,481 last year. The largest relative increase was in rye, of which the export in two months of last year was 162 bushels, and this year has approached 1,000,000 bushels. But the largest absolute advance among the minor grains was made in oats, of which there was exported in two months last year less than 800,000 bushels, and in two months of this year more than 9,000,000 bushels. If we add the exports of wheat, including flour, and of corn up to October 2, and of rye, oats and barley for two months, the bushels of breadstuffs exported, not including such small items as oatmeal and cornmeal, have been 84,835,811 bushels this year, against 46,603,334 bushels last year. The increase in cotton sent abroad is even more marked."

More than 2,000 tons of flour has gone east by water from Duluth to New York "at a rate from 20 to 25 per cent. below lake-and-rail rates." In other words, on this quantity of flour northwestern millers "have been able to deliver it in New York at about 30c. a barrel by the use of the canal, as against 40c. a barrel, which has been the rate prevailing throughout most of the season by lake and rail, a saving of 10c. a barrel, which is a good profit of itself."

The *Engineering News* says: "The Lake Erie and Ohio River Ship Canal report, which cost about $35,000, lies in the vaults of the Pittsburgh Chamber of Commerce from lack of funds for compilation and publication. It seems that the city of Pittsburgh has not yet turned over its appropriation for the canal, and appeals to the public have been as yet unavailing."

The twenty-second annual convention of the National Wholesale Druggists' Association was held at Philadelphia this week.

The *Commercial Bulletin* says: "The demand for ocean accommodation still continues. Foreign houses are credited with being heavy holders of wheat futures, which they will, it is expected, exchange for cash wheat when proper opportunity to ship at fair rates is offered. The foreign demand this year is the result of unfavorable crops in Russia, India and the Argentine, though the usual importing countries have themselves fair crop prospects."

The following has been received at the French Consulate in New York city: "By decree of October 2 the interdictory decree of February, 1895, is revoked, so far as concerns living cattle and sheep from the United States to Switzerland via Boulogne, with the condition that the cattle shall be in closed cars, after a sanitary inspection at the port of landing. But in case the Swiss authorities decline to receive such cattle they shall be immediately killed."

The minister of the United States at Pekin, Mr. Charles Denby, has reported to the Department of State that, in accordance with the sixth article of the treaty of Shimoneseki, between China and Japan, the Chinese ports of Foochow and Hangchow were opened as treaty ports on the 26th of September last. By virtue of the same instrument Mr. Denby further reported Shashih and Chungking would be opened as similar treaty ports at an early day.

The *Iron Age* says that a Japanese order for 11,000 tons of steel rails has been placed in America by London merchants. "The price was 70s. at East Coast port, with freight to Japan 22s. English makers quoted 90s. Another contract for 6,000 tons is pending, and will probably be placed in the same manner."

The iron trade is interested at rumors concerning the relations between the leading Pittsburgh steel works, the large Chicago concern and the Rockefeller interest. "The Chicago conference of the leading officers of the former two is interpreted as proving that some important developments are to come soon."

Financial.

The following securities were sold at auction this week in New York:

5 Shares American Surety Company, $50 each	200
$4,500 New York Suburban Water Company, 2½–5 per cent. bonds (hypothecated)	50
$300 New York Suburban Water Company, 2½–5 per cent. bond scrip (hypothecated)	40
60 Shares New York Suburban Water Company stock (receipt of Knickerbocker Trust Company) (hypothecated)	$25
$6,000 Topeka Water Company 6 per cent. bonds (receipts of Knickerbocker Trust Company) (hypothecated)	30
$1,000 Ashtabula Suburban Water and Light Company 6 per cent. bonds (receipts of Knickerbocker Trust Company) (hypothecated)	10

The Central Railroad of New Jersey has declared a quarterly dividend of 1¼ per cent., payable November 2.

Twenty shares of New York Merchants' Exchange Bank stock sold this week at 115; 50 Merchants' at 135, and 30 Fourth National at 169.

The losses by fire in the United States and Canada continue light as compared with two previous years. The *Journal of Commerce* makes the total loss in September about $2,500,000 less than in 1895 and about $2,000,000 less than in 1894. For the year to date the loss is $5,000,000 less than in last year and $6,000,000 less than in 1894. The following table gives the losses by months for three years:

	1894.	1895.	1896.
January	$10,568,400	$11,805,600	$11,040,000
February	11,297,600	12,360,200	9,730,100
March	9,147,100	14,239,300	14,839,600
April	11,540,000	11,018,150	12,010,600
May	10,777,800	7,761,350	10,618,000
June	8,282,300	9,223,000	5,721,250
July	16,307,000	9,085,000	9,033,250
August	10,432,800	9,920,000	8,895,250
September	10,149,900	10,766,300	8,200,650
Totals	$97,602,900	$96,277,900	$90,088,700

The H. B. Claflin Company has declared a quarterly dividend of 1½ per cent. on its common stock, payable October 15. The quarterly interest on its preferred stock will be paid November 1.

The telegraph operators' strike on the Canadian Pacific Railroad was declared off October 7. The trouble was settled by a committee composed of members of the Brotherhood of Engineers, Firemen, Conductors and Switchmen, which committee acted as a conciliatory medium between the Canadian Pacific Railroad officials and the strikers.

A traffic arrangement between the Grand Trunk and Lehigh Valley railroad companies will go into effect October 15, by which all Grand Trunk trains to and from the east will go through Buffalo. All New York trains of the Grand Trunk system heretofore have run to Suspension Bridge, and thence by way of Tonawanda to Batavia Junction.

The report of the Minneapolis & St. Louis Railroad Company for the year ended June 30 shows:

	1896.	1895.	Changes.
Gross earnings	$2,028,301	$1,823,999	Inc. $204,302
Operating expenses	1,136,815	1,029,556	Inc. 107,259
Net earnings	$891,486	$794,443	Inc. $97,043

The all-rail east-bound shipments of dead freight from Chicago last week were 63,993 tons, against 61,880 tons the previous week and 79,908 tons the corresponding week of the previous year.

Operations of the Missouri, Kansas & Texas for the fiscal year ending June 30 are reported as follows:

	1896.	1895.	1894.
Gross earnings	$11,036,989	$11,544,363	$9,877,290
Op. exp. and taxes	7,704,099	8,421,183	7,205,941
Net	$3,332,890	$3,123,179	$2,671,349
Prop. exp. to gross	70	73	73
Interest	2,667,710	2,612,943	2,609,360
Guaranteed interest	166,250	----	----
Rentals	272,534	285,496	71,510
Other payments	10,000		----
Total payments	$3,316,494	$2,898,439	$2,680,870
Surplus	16,396	224,740	Def. 9,521

The Missouri, Kansas & Texas earned net in 1893, $2,577,457; in 1892, $2,433,070; in 1891, $2,768,649; in 1890, $2,652,143.

The Western New York & Pennsylvania Railroad Company reports to the Railroad Commissioners for the year ending June 30:

	1896.	1895.	Changes.
Gross earnings	$3,186,030	$3,282,010	Dec. $95,980
Operating expenses	2,233,911	2,292,836	Dec. 58,925
Net earnings	$952,119	$989,174	Dec. $37,055
Other income	56,638	29,600	Inc. 27,038

Miscellaneous.

Acting Attorney-General Whitney has decided that foreign made chromos, which are copies of a copyrighted foreign painting, are not prohibited from importation into this country under the copyright law.

J. Edward Simmons has been elected president of the New York City Clearing House. Since the Clearing House was established forty-two years ago there have been fifteen presidents, of whom five are living. Mr. Simmons is president of the Fourth National Bank. He was a member of the Clearing House Loan Committee in the panic of 1893, and of the committee which recently completed the new Clearing House building, at a cost of $1,100,000. He served for five years as president of the New York Board of Education, was president of the Stock Exchange in the panic of 1884, and has also been vice-president of the Chamber of Commerce. He is now president of the Panama Railroad.

Foreign.

Cables from Brazil report "a serious condition of financial and commercial affairs in that country. The troubles began with the failure of Frias Hermanos several weeks ago with liabilities exceeding $2,000,000." Other failures and rumors of failures have been received since.

The returns issued by the British Board of Trade for September show an increase in total British imports of £2,490,000 and an increase in exports of £340,000 during that month, as compared with those for September, 1895.

The movement of the coffee crop of Central America and the contiguous sections of South America in transit across the Isthmus of Panama has begun earlier this year than last, and the volume is much larger. "The estimate of the crop places it at 1,000,000 sacks. Large arrivals are announced for November."

A meeting in London, October 6, was held to inaugurate "the international submarine telegraph memorial." The object of the meeting was to put upon record the administration of the authors of international submarine telegraphy, especially Cyrus W. Field, Sir John Pender and James Anderson. A committee was appointed to consider the form of the memorial.

A Pekin cable says: "Consent has been given by the Chinese government for the building of a branch of the Siberian Railway across Northern Manchuria, with a preëmption clause giving China the right of purchasing this branch after thirty years. Permission to construct a branch through southern Manchuria was refused."

Total exports of British tinplate in September were 18,000 tons, of which 7,000 tons went to the United States, against 28,000 tons and 17,000 tons respectively. Exports of black plate, 5,000 tons, of which 2,000 to the United States.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Statutory Construction—Liquor Law.

The Supreme Court of Indiana held, in the recent case of The State of Indiana vs. Myers, that the word "and" in the declaration that its provisions shall apply to persons, places and sales of "spirituous, vinous, malt and other intoxicating liquors," as found in section 10 of the Nicholson law, was equivalent to the word "or," being used disjunctively, and that any person engaging in the sale of any kind of intoxicating liquor was subject to the provisions of that section, and must conduct his business in conformity therewith.

Railway—Accident—Negligence—Jury.

In the case of Wood vs. Chicago, St. Paul & Omaha Railway Company, it appeared that the plaintiff, a brakeman on one of the defendant's freight trains, while engaged in attempting to uncouple the engine from the train while in motion, was injured by reason of the train breaking in two and a subsequent collision between the detached parts. The court held that under the evidence it was a question for the jury whether the "swing man," who was on top of the car next the engine, exercised reasonable care in watching the rear of the train, and in keeping a lookout in that direction for signals from the conductor.

Collateral Inheritance Tax—U. S. Bonds.

The Court of Appeals of New York has just handed down a decision in the matter of the estate of Augustus Whiting, holding that United States bonds of foreign decedents in the state of New York are not taxable under the Collateral Inheritance Tax law. The decedent was a resident of Newport, R. I., who had a large amount of stocks and bonds in the vaults of the New York Stock Exchange. The decedent's daughter and beneficiary was also a resident of Newport. The Court of Appeals has reversed the decision of the Appellate Division of the state Supreme Court, which affirmed the action of the surrogate in taxing the United States bonds.

Married Woman—Mechanics' Lien.

The Kentucky Court of Appeals held, in the recent case of Webster vs. Tatterstall, that in order to create a mechanics' lien upon the property of a married woman the service or labor must be performed or the materials furnished under a written contract signed by her; that a written contract signed by the husband is not sufficient, as such liens can be created only in the manner pointed out by the statute, and that while the doctrine of estoppel might be held to apply as to a married woman where fraud was practiced by her, the facts of the case did not come within that rule, and the wife's mere acquiescence did not make her property liable for the debt.

Debtor—Assignment—Claims.

The Supreme Court of Georgia held, in the recent case of Van Pelt vs. Hurt et al., that a written assignment of "all the claims" of the assignor against a named debtor arising upon certain loans made by the assignor to the debtor, operates to pass to the assignee all choses in action falling within this description, including promissory notes held by the assignor against the debtor at the time the assignment was made, and that while such an assignment of a promissory note, or other evidence of indebtedness, secured by a deed to land executed under the provisions of section 1969 et seq. of the code, does not pass to the assignee a legal title to the land itself, such assignee has, and as against the debtor may, when necessary to the collection of such claim, assert an equitable interest in the security effectuated by the deed, and in such case it is within the power of the court exercising equity jurisdiction, upon proper pleadings and evidence, to afford appropriate relief in the premises.

Railroad—Accident—Trespasser.

The Kentucky Court of Appeals held, in the recent case of Embry vs. Louisville & Nashville Railroad Company, that the servants in charge of a railroad train are not required to keep a special lookout for trespassers on the track, being under no obligation to act for their safety until they are actually discovered; that in an action against a railroad company to recover for injuries to plaintiff alleged to have resulted from the gross negligence of defendant in running one of its trains against plaintiff, the petition was fatally defective in failing to show that plaintiff had any right to be on the track or that defendant owed him any duty, and therefore a peremptory instruction to find for defendant was proper; that the statement in the petition that the track at the place in question had been used as a passway for many years "with the consent and knowledge of defendant" could not be construed to import an express consent to such use so as to have made it the duty of defendant or its servants in charge of its trains to keep a special lookout for persons on the track at that point, and that it was not competent for plaintiff to prove that the engineer had stated that he saw plaintiff sitting on the side of the track ahead, but was "afraid to ring the bell or to blow the whistle for fear plaintiff would straighten up and the cylinder would hit and kill him," as this was hearsay testimony, and the statement being made after the plaintiff had been taken to his home and the engineer was returning to his train, it did not constitute a part of the res gestae, but that, even if true, it gave a good reason for not sounding the alarm, if, in fact, none was sounded.

Railroad—Ejection—Trespasser.

The Supreme Court of Georgia held, in the recent case of Higgins vs. Southern Railway Company, that a railroad conductor represents the company by which he is employed in determining what persons are entitled to ride upon the trains committed to his care; that his act in expelling from a train a person not entitled to ride thereon as a passenger, being one performed by him in the line of his duty, is in law the act of the company, and that even a trespasser who intrudes upon a freight train under a fraudulent arrangement with an inferior employee who has no authority in the premises, is entitled to protection against violence on the part of the conductor, wantonly and unnecessarily exercised in expelling him from the train, and that for injuries to his person resulting from such violence the railroad company is liable.

Railway—Accident—Trespasser.

The Kentucky Court of Appeals held, in the recent case of The Louisville & Nashville Railroad Company vs. Wade, that where a boy walking on a railroad switch was struck and injured by a piece of timber projecting from a freight car passing on the main track the company was not liable for the injury, as it had not licensed the boy or the public generally to use the track in question as a passway, and the facts did not authorize a presumption of license; nor was there anything to show that the company's agents or servants knew of the dangerous condition of the timber, and that, therefore, in an action against the company to recover damages for the injury, a peremptory instruction asked by defendant should have been given.

Land—Dedication—Levee—Warehouse.

The Supreme Court of Minnesota held, in the recent case of the City of St. Paul vs. Chicago, Milwaukee & St. Paul Railway Company, that where land has been dedicated to a specific, limited and definite public use, the legislature has no power to destroy the tract or divert the property to any other purpose inconsistent with the particular use to which it was dedicated; that the state holds such property not in a proprietary but in a sovereign capacity in trust for the use to which it was dedicated, and that while much must be left to the discretion of the legislature as to the best manner of regulating that use, yet its power of control over such property must be exercised in conformity with the purpose of the dedication. The court decided in this case that the erection of a warehouse on land dedicated to public use as a levee is not necessarily a misuse of the property as such structures may be in aid of the use for which it was dedicated. The legislature, the court said, may also grant or authorize the granting to any person or corporation having traffic with craft navigating the contiguous waters the exclusive use of so much of a public levee as is reasonably necessary for his or its business with such craft, provided, and so long as, it does not unreasonably interfere with the use of the levee by the public. But to give a public levee, or any part of it, to a railway company as a permanent site for its general freight warehouse without reference to its traffic with craft navigating the contiguous waters, would constitute a diversion of the property to a use foreign to and inconsistent with that to which it belongs. In further defining the legal relationships growing out of the circumstances of the case, the court said: "A grant of special privileges on land dedicated to a particular public use is always subject to the implied condition that it may be revoked whenever the needs of the public require; and the state or municipality has a large discretion in determining when such a condition has arisen; but such a grant, rightfully made, is not revocable at the mere arbitrary pleasure of the state or municipality. When such a grant has been acted on the licensee has vested rights in the license which are subject only to the paramount interests of the public."

BUSINESS NOTES.

To Investigate Italian Immigration.

Commissioner-General Stump, of the Bureau of Immigration, Treasury Department, was to leave New York, October 7, for an official trip to Italy. He goes to investigate the subject of Italian emigration to this country, to coöperate with the Italian authorities in the formation of regulations to prevent ineligible Italians being duped into taking passage for the United States, and to gather such information generally as will enable him to make a report to Congress on the subject. He is also instructed to visit Havre and investigate the subject of Armenian immigration to this country. It is from Havre and Marseilles that most of the Armenians sail for the United States.

Window Glass Industry.

The New York *Oil, Paint and Drug Reporter* says: "A careful review of the window glass industry of the United States for the year of 1895–96 shows that the product of our factories amounted to about 3,000,000 50-feet boxes. The imports for the fiscal year ending July 30, 1896, amounting to nearly 1,000,000 50-feet boxes, which, added to the home production, would foot up 4,000,000 50-feet boxes and constitutes the consumption of the United States for the period mentioned. The production, by reason of the fires being 14 weeks short, was considerably below the average, and consumption, owing to the dullness in the building trades, was also less than in former years."

Erie Canal Traction.

The New York *Engineering News* says: "The Erie Canal Traction Company is reported as sold to an English syndicate for $3,000,000, though the exact terms and proportion of stock transferred are not yet known. The sale was made by the Cataract General Electric Company, and it covers the right to construct an electric towing system along the canal. Meanwhile the right of the Cataract General Electric Company to erect poles along the canal, and the validity of the franchise generally, are being questioned by interested parties, on the ground that the franchise for the installation of an electric towing system was obtained through political intrigue and without compensation to the state."

Australian Oranges in London.

The Edinburgh *Scotsman* says: "The orange groves of New South Wales are famous throughout Australia, and the British public will soon be afforded an opportunity of testing the quality of the fruit. The knowledge that the Tasmanian growers have established a flourishing export trade in fruit with London, sending as many as 250,000 cases in a season, has induced the New South Wales government to forward an experimental shipment of oranges to England this autumn. The fruit has just been dispatched on the steamship Ophir—1,700 cases in all—and should be on sale early in October. The government is prepared to spend £1,000 on the experiment, but is confident that the consignment will more than cover the cost. The fruit will come in the cold storage chamber."

Japan vs. Ceylon Teas.

The *Japan Weekly Mail* says: "The Japanese Central Tea Guild has decided to spend a sum of 2,000 yen on advertisements in American papers, so as to counteract the growing influence of Ceylon tea, which, owing to the skillful way in which it is pushed, is becoming more and more popular in the states. The Central Guild convenes an extraordinary general meeting at Miye on the 5th prox. (October). One of the topics of discussion will be how to tide over the present difficulty, and what steps should be taken to insure the future prosperity of this important industry in Japan. Some of the tea men are in favor of applying to the government for a loan of 350,000 yen, though it is considered doubtful whether this request would be acceded to."

British Trade with China.

The London *Westminster Gazette* says: "An interesting report has just been published on Chinese trade, from which it appears that the war which prevailed during the early part of 1895 did not adversely affect Chinese commerce. The value of the foreign trade last year was nearly 315,000,000 Haikwan taels, or £51,500,000. In 1894 the value was 290,000,000 taels, or about £46,500,000. There has thus been an increase of nearly 25,000,000 taels. This increase is remarkable, as it is greater than that which took place in 1894 as compared with 1893, and far greater than the increase shown in the returns for 1892. The annual value of the trade between China and Great Britain in 1895 was 44,500,000 taels, or more than £7,000,000. The total value of the trade of China with the British empire, including Hong Kong, amounted to 215,000,000 taels, or nearly £36,000,000, and in 1894 to 204,000,000 taels, or £34,000,000. The only British possession in the case of which there has been a diminution in the trade between itself and China is India. Mr. Grant Duff is of opinion that at present Great Britain has every reason to congratulate herself on her commercial position in the Far East."

Rapid Growth of Cities.

In *Scribner's* for October is found the following: "More than one-third of the entire population of these United States now live in cities. In some states it is much greater; in Massachusetts, 70 per cent.; in New York, 60 per cent.; in Connecticut, 54 per cent.; in New Jersey, 52 per cent. In 1790 there were but six 'cities'—i. e., having a population of more than 8,000—in 1890 there were 448 such cities. In 1840 there were but three cities with more than 100,000 inhabitants; in 1890 there were twenty-eight such cities. In 1870 there was no city having 1,000,000 inhabitants; in 1890 there were three such cities. In 1896 the new New York is estimated to contain 3,200,000 inhabitants, or nearly as many as the thirteen United States when George Washington took the oath of office as first President."

Sewing Machines in Turkey.

Sewing machines are found in Turkey not only in the seaports and the districts served by the railways, but also in Erzeroum, Diarbakir and Damascus. "Their introduction is principally due, according to *Handels Museum*, to a German-American house, which has established about 150 agents in Turkey. At the present day Turkish, Greek and Armenian women appear to appreciate very highly the usefulness of the sewing machine and its advantages over manual labor. Of the 18,000 to 20,000 machines imported annually into the Ottoman empire the greater part are for the use of families and consist of hand machines, while the remainder is composed of treadle machines for use in the various industrial establishments. These machines come not only from Germany, but also from England, the United States and Austria."

The Swiss Silk Trade.

The London *Journal of the Society of Arts* says: "The value of the exports of silk piece goods from Switzerland, including neckwrappers and shawls, in 1895 amounted to 86,750,000 francs, as compared with 77,500,000 francs in 1894, an increase of 9,250,000 francs. The exports to France increased from 8,000,000 to nearly 10,000,000 of francs, but it is believed that this export will not reach more than the half of what it was before the establishment of the French custom tariff of 1892. A duty of 200 francs per 100 kilograms on black silk goods is regarded as absolutely prohibitive. The United Kingdom is always the largest purchaser of Swiss silks—33,200,000 francs against 29,840,000 francs in 1894. The United States bought to the value of 20,250,000 francs against 17,153,000 in 1894, and Germany to the value of 8,646,000 as compared with 6,563,000. A falling off is shown in the case of Austria-Hungary, Belgium and Turkey, and some other less important countries."

Queensland International Exhibition.

The London *Times* announces that it has been decided to hold an international exhibition in Brisbane in 1897. The government of Queensland have granted their official patronage to the undertaking, and Sir Arthur Hunter Palmer has accepted the office of president. The proposal has been warmly taken up by the people of Queensland and the adjacent colonies, and the necessary capital has already been subscribed. The exhibition will be opened on May 5, 1897, and will continue open for about three months. Its objects are thus described in the prospectus: "To promote and foster industry, science and art, by inciting the inventive genius of our people to a further improvement in arts and manufactures, as well as to stimulate commercial enterprise, by inviting all nations to exhibit their products, both in the raw and the finished state. Samples of the products for which this and the other Australian colonies have become famous will be exhibited, with a view to increase the development of their natural resources." Similar exhibits are expected from Great Britain, Europe, America, India, Canada, Japan, China, the Cape and the other colonies, to which the government of Queensland have forwarded an official invitation to grant their substantial support to the undertaking. A fine art section will form a department of the exhibition, and for the accommodation of the art treasures and the historical objects a special block of the building will be reserved. There will also be a woman's industrial and an artisan section.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Colder weather, continued heavy receipts of cotton and wheat, and other influences have stimulated demand for staple goods at various points, but the volume of trade remains moderate, without material change from a week ago. The tendency at some centers is to a smaller volume of trade, but the general outlook is for an improved demand after election. Interior merchants adhere to the hand-to-mouth policy of buying, and wholesale merchants are inclined to examine into credits closely. Except in the cotton and wheat regions, mercantile collections continue unsatisfactory. Trade improvement is reported from Atlanta, Augusta, Charleston, Birmingham, Ala., New Orleans and Texas cities.

Print cloths are lower, as are cotton, sugar and oats. The recent advance in wheat is firmly held, as is that in wool, iron and steel. Some varieties of pig iron have advanced 25c. per ton. Higher quotations have been made for wheat flour; Indian corn, pork, lard, coffee, petroleum and leather, and advices from interior markets are that the general produce trade show more activity and presents as brighter prospect.

Bank clearings throughout the United States aggregate $1,059,000,000, this week, 18 per cent. more than last week, but 8 per cent. less than in the corresponding week one year ago, and 10 per cent. less than in the like week of 1892, when the volume of business was of full proportions. This week's clearings are 14 per cent. larger than in the corresponding week of 1894, and 17 per cent. larger than in the like week of the panic year 1893.

The world's available stocks of wheat increased about 18,000,000 bushels in September, approximately one-half more than in September in three preceding years. Of the September gain 10,000,000 bushels were of stocks afloat for and in Europe. Total American, Canadian, afloat, European, Australian and interior Russian wheat stocks aggregated 121,609 000 bushels October 1, about 6,000,000 bushels more than on July 1 last, but 25,000,000 bushels less than on October 1 last year, and 54,000,000 bushels less than October 1, 1894. The present world's total of available wheat is smaller than at any corresponding date since 1891.

The Pacific coast reports increasing activity in wheat, the noteworthy feature being a cargo of wheat exported to India. Total exports of wheat from both coasts of the United States and from Montreal (flour included as wheat) continue to attract attention, in view of short supplies in Russia, India, Argentina and Australia. The domestic wheat crop is more likely to approximate 500,000,000 bushels this year than only 400,000,000, the general interpretation or the government wheat crop report. With the prospect favoring an exceptionally large demand for wheat for export within the next six months, a larger supply than heretofore reported is likely to prove fortunate. The total exports of wheat this week amount to 4,050,772 bushels, against 4,215,000 bushels last week, 2,244,000 bushels in the first week of October, 1895, 3,317,000 bushels in 1894, 2,862,000 bushels in 1893 and 3,625,000 bushels in the corresponding week of 1892.

September gross railway earnings make a better showing than those for last August, although both show smaller totals than in the corresponding periods a year ago. Total earnings of 111 companies for the month aggregate $38,291,170, a decrease of seven-tenths of 1 per cent. In August the falling off was 2.4 per cent., the first decrease reported for more than a year. The best showings made are in the south and southwest, the coal roads, one Canadian line and the trunk lines. Decreases are found in returns from the granger, central western and Pacific roads. For nine months gross earnings on 111 roads aggregate $316,000,000, a gain over a year ago of 4.6 per cent., following a gain in 1895 over 1894 of 4.5 per cent. The only decrease reported in the nine months' period is for the central western roads, a fraction of 1 per cent., while the granger roads show the heaviest gains.

A further decline in exchange to the gold importation point has resulted in renewed engagements of gold in London, amounting to about $4,000,000. Some further amounts may also have been taken in Paris. The New York stock market, which was weak on speculative liquidation, due to doubts about the political situation, together with an advance in money rates, rallied on the gold imports, though speculation is very narrow and professional, and closed weak on a bear raid on Friday. Sugar stock is weak, on threatened competition with the Trust. Silver has declined on decreased Indian demand. Bar silver in London is 29 15/16d. per ounce. Foreign exchange is 4.83¾ @4.84 for demand sterling.

There are 291 business failures in the United States reported this week, a decline of 34 as compared with last week, but an increase of 17 as compared with the first week in October, 1895, and an increase of 53 as compared with the corresponding week in 1894. When contrasted with the corresponding total in 1893, this week's falling off is 115.

General trade at Toronto is without feature, except that colder weather has exercised a slight influence in stimulating demand for seasonable goods. Orders for dry goods are received with greater frequency by Montreal jobbers, but the amounts involved are small, and September's total volume of general trade is less than that of a year ago. The dry goods trade at Halifax is somewhat improved, and heavy exports of apples from that province continue. Prince Edward Island farmers are satisfied with the crops, and while Newfoundland reports the Labrador fishery a failure, the shore fishery is said to have been unusually good. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $21,145,000, an increase of about 16 per cent. as compared with last week, but a decline of about 6 per cent. as compared with the corresponding week one year ago. There are 37 business failures reported from the Canadian dominion this week. Last week the total was 23, one year ago it was 54, and two years ago 37.

FINANCIAL.

The Money Market.

Last Saturday's bank statement pointed to an accumulation of money at New York, and similar conclusions were drawn regarding the condition at other points. The belief that the New York loan market was unlikely to encounter further stringency has not been verified. On the contrary, the supply of funds has decreased and considerable calling of loans has resulted. On Tuesday the call-loan rate advanced to 6@7 per cent., and some transactions were made at as high as 10@12 per cent. Later in the week the tone was irregular, and the bulk of the borrowings on the Stock Exchange were at 6 per cent. or a little higher, with lower figures at the end of the day when belated offerings of bankers' balances came on the market. The movement is not exactly understood. It cannot be traced to manipulation of rates. There is, however, a disposition to attribute it partly to the renewed demand for gold and for gold options. Time money has been dull with a decrease in the offerings, the demand being also small and rates are 6 per cent. for all dates. Activity in commercial paper has decreased to a marked extent. There is very little buying demand and a limited volume of offerings, the quoted rates for double names being 7@9 per cent.

Surplus reserve	2,332,629	2,372,343	Dec. 39,714

The New York Banks.

Last Saturday's bank statement was the most favorable one which has appeared this autumn. The figures of last week present increases in every case, and represent the influence of the heavy receipts of gold from abroad which, it would seem, have offset continued shipments of money to the interior. The total gain in cash holdings was $3,900,000, made up of increases of $1,470,000 in specie, and $2,430,000 in legal tenders. Loans were augmented by $2,624,000, and the deposits were swollen to the extent of $6,364,000. As a result of the other changes, the surplus reserve increased $2,310,000, the figures of the statement comparing as follows with those of the preceding week:

	Sept. 26, '96.	Oct. 3, '96.	Changes.
Loans	$450,541,100	$453,166,000	Inc. $2,624,900
Specie	54,330,900	55,801,100	Inc. 1,470,200
Legal tenders	71,977,300	74,408,200	Inc. 2,430,900
Deposits	448,338,700	454,733,100	Inc. 6,364,400
Circulation	19,709,100	19,960,400	Inc. 251,300
Total reserve	126,308,200	130,209,300	Inc. 3,901,100
Reserve required	112,092,175	113,683,275	Inc. 1,591,100
Surplus reserve	14,216,025	16,526,025	Inc. 2,310,000

At the corresponding period last year the surplus reserve was $16,471,525, as compared with $59,450,950 in 1894.

Silver.

The London market for bars was heavy this week on large supplies and a very restricted Eastern demand. There were no features of importance, and the New York market followed London.

SILVER PRICES.

	Oct. 3.	Oct. 5.	Oct. 6.	Oct. 7.	Oct. 8.	Oct. 9.

Foreign Exchange.

The rally in exchange rates appears to have culminated at the close of last week. Last Monday's mails brought in a generous amount of commercial bills that had been interrupted by the storms and interruption of communications. At the same time the renewed buying demand, caused apparently by the maturing of sterling loans, was satisfied. Under the pressure thus created posted rates were reduced ½c. twice on Monday, closing at 4.82½ @4.85, which figures prevailed for the balance of the week. The decline in actual business for demand sterling was fairly continuous, and

was facilitated by the firmer tone of the New York money market, which tended to discourage inquiry for exchange. By last Tuesday the actual figure for sight bills was down to 4.84, and the expectation that renewed gold imports would set in became positive. On Wednesday the rate declined further to 4.83¾ @4.84, and the announcement that $600,000 gold had been taken for American account in London created no surprise. Some uncertainty prevailed on Thursday as to the amount of the gold engagements made abroad, but on Friday arrangements on a large scale were announced bringing the total for the week up to $4,350,000, of which $1,000,000, it is understood, comes from Paris. Posted rates were reduced to 4,82@4,84½.

4.82¾ @ 4.83	4.82¼ @ 4.82½	4.81¾ @ 4.82	4.81½ @ 4.81⅝	4.81½ @ 4.81¾	4.81¼ @ 4.81¼

Closing quotations on Friday for actual business in other class of bills were: Cable, 4·84¼; commercial bills, 4.80¼ @4.80½; francs, 5.21⅞ @5.20; reichsmarks, 94⅞ @95.

The Bank of England discount rate is unchanged at 3 per cent. The bank this week lost £872,000 specie, further withdrawals of eagles for American account being reported at the close of the week. The bank's proportion of reserve is 50.67 per cent., against 50.14 per cent. last week. In the London open market discount has become stronger on the prospect of further gold exports, the rate, after declining to 1¾ @1⅞ per cent., rising to 2@2⅛ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending October 2, 1896:

	1896.	1895.
Dry goods	$1,383,199	$3,113,087
General merchandise	6,721,061	7,756,787
Totals for the week	$8,104,260	$10,869,874
Previously reported	343,801,122	389,837,272
Since January 1	$351,905,382	$400,707,146

THE STOCK MARKETS.

The New York Stock Market.

Liquidation of speculative holdings and renewed activity by bearish operators gave an unsteady appearance to speculation and caused pretty general declines in prices this week. The movement was a natural one in view of the pronounced rise that had occurred during September, coupled with the fact that the improvement in question had not resulted in attracting outside interest or in inducing foreign buying. The professional interests which were responsible for the advance were, therefore, ready to take profits on the long side and to work for a reaction in prices that would not only facilitate operations for the short account, but would furnish opportunity for the acquisition of lines of long stock on a more advantageous basis. The bearish manipulation was aided by a number of circumstances. The conservative estimates put forth by the managers of the sound money canvass in regard to the political outlook in the west were interpreted on the street as implying doubts about the result of the election. The unexpected reappearance of stringency in money and the development of the facts that there is a demand for gold for hoarding purposes and that calls on gold, designed as an insurance against the possibility of a free-silver victory, are in some request, also had an unsettling influence on sentiment. It is also thought that while the speculative community is not inclined to remain short of the stock market over the election, the four weeks which remain before the questions at issue are decided will be marked by speculative uncertainty and unrest in business which make it unadvisable to further discount the prospect of electing the sound money candidate. On the other hand, the condition of the grain and cotton markets give assurance that the favorable condition in our foreign trade will continue, and the renewed decline in exchange has been promptly followed by further engagements of gold in London for shipment to this country. The total amount of specie shipped from the other side during the week is $4,350,000, and foreign exchange is at a level which affords assurance that the movement will probably continue. Among other favorable items of news is the commendable disposition of the western railroads to settle their troubles and advance rates, while the rate war at the south seems to be a thing of the past since control of the principal aggressor—the Seaboard Air Line—has passed into the hands of an interest allied with the Southern Railway corporation. The decline of American sugar stock, though a feature of the market, was the result of circumstances peculiar to the company and to the trade, the principal factors being the weakness of the raw sugar markets and the report that a large financial interest was about to establish opposition refineries. On Friday the market, with the exception of sugar, was strong till the last hour, when renewed weakness appeared on bear selling based on the lack of support and the fear of a bad bank statement.

Boston Stock Market.

The market has ruled easier, with prices lower on most stocks. Atchison has declined 1 point for the week, and Chicago, Burlington & Quincy 1¾ points. Other railroads were quiet, and closed lower. Boston & Montana attracted fair attention, but sold down 2½ points. Sugar declined 4¼ points on an active market, while Bay State Gas went off ¾.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE QUIET.

SLIGHTLY IMPROVED TRADE IN THE COTTON AND SPRING WHEAT REGIONS.

ONLY A MODERATE VOLUME OF BUSINESS EXPECTED UNTIL AFTER ELECTION.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, October 9.—The tone of trade has been fair in most departments of the merchandise market, with conditions working slowly for the better. The money market is irregular. The demand is light, which helps to steady the market. Call loans are quoted at 5@6 per cent. at the close, with most time loans at about 6@6½ per cent. Some factory paper has sold down to 5¼ @5½ per cent., but at the close 6 per cent. is generally asked. Under a good demand, New York funds sold from 10 per cent. discount down to par. The boot and shoe market is quiet, but the tone is firmer. Some orders for spring goods in women's wear are being placed, but in men's wear only samples for spring and reorders for fall are being sold. Leather is quiet and firm, with hides in light supply and quoted higher. The iron and steel trade is quiet but steady. Lumber trade rules fair, with prices quite firm.

Providence, October 9.—Although still depressed, general business continues to maintain a somewhat improved tone, particularly in such lines as cotton yarns, manufactures of jewelry, hardware, etc.

Philadelphia, October 9.—Wool market conditions remain unchanged. There is a little better demand for dry goods, and cooler weather has stimulated trade in clothing lines. Petroleum is in better demand, with a brighter outlook. Leather and morocco are dull, and prices still have a downward tendency. There is a fair demand for boots and shoes. Sugar has dropped in price, and demand is light. Very little is doing in paints, glass and drugs. There is practically no market for tobacco, and collections generally are slow. Anthracite coal is in fair demand, but trade is not sufficiently active to warrant the advance anticipated.

Pittsburgh, October 9.—No material change is noted in general business conditions. The outlook is hopeful and a steady demand continues for staple articles. Prices remain firm. The local iron market is practically in a waiting condition, although numerous inquiries are being made, with prices steady and collections slow.

Buffalo, October 9.—There are no new features in general trade. Jobbers report business fairly active and in some instances better than last year at this time, but the buying is still done on the "hand-to-mouth" plan, and credits are being scrutinized very carefully. A better spirit seems to prevail as election day draws near, and many are ready to predict that after the currency question has been decided there will be an increased demand for goods in all lines and a marked improvement in business.

Baltimore, October 9.—Business continues fairly satisfactory. Leading houses have their salesmen out on the road taking "filling-in" orders, and they report fairly-good results. Collections show a slight improvement, and from the present outlook merchants feel they have no cause to complain.

West and Northwest.

Cincinnati, October 9.—Trade is dull.

Cleveland, October 9.—General business continues to be confined to present requirements and along conservative lines, without material change.

Detroit, October 9.—The condition of trade in most lines shows little change from last week. Business is fair but collections are still complained of.

Chicago, October 9.—There is no material change in the general jobbing trade, the volume of business being about equal to that of the previous week in dry goods, clothing and shoes, and is hardly up to last years. There is a pronounced improvement in the tone of the leather market. Hides have advanced 37½ per cent. from the low prices in August, which has stimulated buying of leather. A firmer feeling exists on grained and sole, and sales are being made at better prices. Calfskins, however, show no change, but are held firmly. At the present figure for hides there is no money for tanners unless leather advances. Light hardware orders are moderate, but more inquiry is noted for bar iron and heavy iron goods. Large sales of pig iron are reported, several lots of 1,000 and 2,000 tons being closed. Lake Superior pig is 25c. to 26c. higher on deliveries beyond January 1. Although spot orders for billets and steel rods are light, and the Joliet mill of the Illinois Steel Company with 3,000 employees has closed, there is more inquiry for billets and rods for delivery the first three months of next year, but manufacturers here are slow to accept the terms offered. The lumber trade is more active. Butter is higher, but trade in general produce is slow. Wool receipts 503,580 pounds.

Louisville, October 9.—Trade in general merchandise is quiet. Some activity is noted with smaller industrial enterprises. More confidence is manifested among the larger manufacturers, evidenced by resuming operations after a temporary suspension of work. There is little doing in leaf tobacco, and only a few hogsheads of new crop received. Collections are only fair.

St. Louis, October 9.—General trade, while not normal, is of satisfactory volume, and is better than was expected a few months ago. Leading necessities continue to move freely, the gradual increase being considered healthful. Values are advancing also, and from indications will be maintained.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM SEPTEMBER 26, 1896, TO OCTOBER 2, 1896, INCLUSIVE.

Wool is strong. Some of the holders anticipate a greater advance consequently are not pushing sales at present figures. Canned goods and dried fruits are high. Trade in produce is better than it has been for several weeks and all receipts are in good condition. Some betterment is noticed by agents for pig iron furnaces, although actual sales are still of light tonnage. Iron and steel bars are unchanged in price. The Bar Iron Aacociation is in session here. Tin is low.

Kansas City, October 9.—This being carnival week the city is full of country merchants. Wholesale dry goods, boots and shoes and grocery houses report good sales. Collections are slow. Live stock sales are large at good values.

Milwaukee, October 9.—General trade remains quiet and devoid of new features. Collections are still slow.

St. Paul, October 9.—Staple lines are the only ones in which there is any activity at this time, and in none of these is more than fair trade reported. The disposition is to buy light, and a general falling off is looked for as election day approaches. The rise in wheat has influenced sales, and, in consequence, collections have improved noticeably.

Minneapolis, October 9.—Flour is less active than last week, but production continues large. There is some inquiry for lumber, but trade in that line is quiet. The situation as regards dry goods, hardware and groceries is unchanged.

Omaha, October 9.—Business still continues quiet and collections dull.

Sioux Falls, October 9.—General trade conditions continue the same, showing the effect of higher prices for grain. Collections are very fair.

Southern Cities.

Charleston, October 9.—Business is good in all lines. Collections are better than they have been in years. Cotton is still moving freely, and a better feeling is expressed as to an increase in trade.

Savannah, October 9.—Slight falling off in trade is reported, due to the recent storm and local election. Collections are good. Naval stores receipts are lighter. Foreign shipments show a decrease, but domestic shipments are about the same. Prices are very good, and the market firm.

Atlanta, October 9.—Trade and collections are good.

Augusta, October 9.—Grocery and provision trade is a little off this week, compared with the very good business of September, but the demand is still good, with colleetions quite satisfactory. Dry goods jobbers are doing well. There is a generally hopeful feeling among jobbers, based on the present good demand.

Birmingham, October 9.—General business shows considerable improvement. Collectlons are somewhat slower than desired for the season.

Chattanooga, October 9.—Retail merchants are taking advantage of cash discounts. Collections are quite good. Retail merchants find it very difficult to make collections.

Nashville, October 9.—Business continues good. Country collections are favorable. There is no change in the conservative policy of banks. No important inconvenience has resulted.

Memphis, October 9.—Business is fairly good. Very little change is noted in trade circles. Collections are fair.

New Orleans, October 9.—There is an improvement in the volume of country orders. The general tone is better owing to renewed confidence. Cotton receipts are large. Trading is restricted by want of freight room. Prices are lower. Sugar is quiet. New crop movement is expected. Rice strong. The export movement of bulk grain continues large. There is a good demand for loans for nominal trade.

Galveston, October 9.—Business continues to show some improvement, and collections are reported good. Interior merchants are buying staples principally, and are more conservative than in former years.

Pacific Coast.

San Francisco, October 9.—No improvement is noted in general merchandise lines. Wheat has advanced to $1.15 per cental. A ship has been chartered and is loading with wheat for India. Freights are firm, though not as active as last week. Collections are slow.

Portland, October 9.—Dried and fresh fruits are selling freely on a firmer market. Farmers generally are now letting their wheat go, and the sales have increased the demand for all lines of goods. Collections, too, have been materially benefited. The wool situation is unchanged and no sales have been made. Hops have not advanced.

Tacoma, October 9.—Twenty coal, lumber and wheat vessels are now in harbor. Wheat is moving more freely. African lumber trade is reviving, and lumbermen are pushing trade in other foreign countries by sending representntives there. Local business shows some improvement.

Seattle, October 9.—Trade shows a decided improvement, foreign exports and imports being particularly large. A Japan steamship brought 800 tons of tea, besides silks and curios. September exports were larger than in August. Grain is arriving freely for export.

Canada.

Toronto, October 8.—Business in wholesale lines is featureless. Prices are strong for cotton and woolen goods, with a fair number of orders for winter trade. Colder weather improves the outlook. Payments are rather backward. The failures in mlilinery have bad effect.

Montreal, October 9.—Business shows no general improvement throughout this province. Dry goods orders come in fairly well, but are small and only for immediate wants. The same may be said of hardware, clothing and shoes. Groceries show steady activity. General results for September show that the improvement over the same month last year was small. Rainy weather has interfered with retailers' sales, but has helped lumbermen to drive logs to mill.

Halifax, October 9.—Cooler weather has stimulated the dry goods trade to some extent. General business is fairly active but the volume is light. Large shipments of apples are being made to the British markets. The crop has been remarkably large. Prince Edward Island farmers are well satisfied with the crops and there are some signs of improvement in trade this fall. Newfoundland advices indicate an undoubted failure of the Labrador fisheries, but the shore fishery has been unusually good. On the whole, the fishery may not be very short of an average one. Shipments of lumber from New Brunswick are light at present.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2.....	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Dry Goods.

The market is steady, with operations seasonably fair. Cotton goods are in poor shape, although the accumulated stock has been considerably reduced. Machinery is being started, and buyers who have a good supply of low-cost stuffs on hand are not disposed to buy much at the advance. Printed fabrics are meeting with a steady fall sale, and prices are firm. Outing cloths and flannelettes are meeting with an excellent fall demand. Ginghams are quiet, with the market steady. Dress woolens are quiet but business is fair. Spring samples are being opened but orders are moderate as yet. Men's-wear woolens are meeting with a quiet sale for spring. More orders are being taken, but it is mostly cheap goods that are being sold. The higher-cost fabrics are very slow of sale.

Wool.

The market holds firm with a fairly good business in progress. Buyers are free purchasers at last week's values, but the tendency of holders is to ask more, and this checks sales. Concessions of ¼ to ½c. would have doubled the week's sales, some bids on lines of foreign wools running into the million pounds having been refused, with only a fraction between the buyer and seller. Territory wools meet with most attention, and on the basis of 30c. scoured for fine medium and fine, a liberal business could be done. Some choice staple lots are now held above that price. Fleece wools are firm, but offerings and demand are moderate, and prices are largely nominal. London sales rather firmer. Sydney, Australia, sales opened October 7 with prices ½d. below close last year. Melbourne sales open October 14.

"MASSES AND CLASSES."

The London *Chronicle* says: "Making an allowance for increase in population, but adhering generally to Sir Robert Giffen's figures, the manual workers and their average yearly incomes are today in England approximately as follows:

Manual workers.	Number.	Income per head.	Aggregate income.
Men.....	7,500,000	£60	£450,000,000
Women.....	3,000,000	40	120,000,000
Boys and girls.....	3,000,000	24	72,000,000
Total.....	13,500,000	£48	£642,000,000

"Reckoning the adult males as one in four of the total population, and taking the number of men as our guide, these 13,500,000 wage-earners represent and maintain a working-class population of 30,000,000 men, women and children. Consequently the average income per head of the masses works out at £21 8s., or for a family group of five at £107. This is undoubtedly an outside average, but it will suffice.

"The total income of the remaining 9,000,000 of the community may be taken approximately at £810,000,000, of which £660,000,000 is represented by the gross assessments to income tax, less exemptions under £160, and £150,000,000 by incomes under £160 other than those of manual workers, This gives us a total of £1,452,000,000 as the aggregate income of the United Kingdom. (Sir R. Giffen's own estimate was from £1,430,000,000 to £1,500,000,000.) This total income, then, is shared equally as follows:

	Number.	Aggregate income.	Per head.
The masses.....	30,000,000	£642,000,000	£21 8s.
The classes.....	9,000,000	810,000,000	90 os.

"Again reckoning five to the average family group, we get an average income of £107 in working-class homes, against one of £450 in the homes of the black-coated classes."

IMPORTATION OF CORN BY MEXICO.

The *Commercial Bulletin* says: "The import duty on corn in Mexico, which was last summer removed temporarily by the Mexican government for the two states of Vera Cruz and Tamaulipas, for the reason that a scarcity of that grain in those sections threatened a famine, was to have been restored on the first of the present month. Whether this has been done could not be learned definitely, either at the office of the Mexican consul, or from the steamship companies which have been carrying the grain to Mexico, and some of the latter were of the opinion that it had not been, but a prominent grain merchant here stated that he had had an order canceled within a few days, on the ground that the duty had been renewed, which is, apparently, conclusive evidence that the change has been made. It is said, however, that if the duty has been reimposed, the movement of corn from this country will continue for some time, as the stocks in the sections referred to were small when the duty was removed. Shippers are at present attempting to engage steam tonnage for the trade for October and November. The duty was 1c. per kilo (Mexican money). During the period of its removal there were unusually large shipments of corn from this country to Mexico, the movement being mainly via gulf ports, particularly Mobile. The Munson line, which sent several steamers from the latter port, is said to have handled the bulk of the traffic. A party in a position to speak with authority estimated that nearly 2,000,000 bushels of corn had been shipped to Mexico during August and September. About 200,000 bushels are said to have been shipped from Pensacola, Florida, about 250,000 from New York, and the balance from Mobile. The movement is believed by some to be of a speculative character, as some buyers have stocked up heavily with the intention, it is claimed, of holding the grain until the duty should be reimposed, when higher prices could be demanded. Others, however, believe the demand to be a purely natural and legitimate one."

VARIOUS IRON AND STEEL "POOLS."

The Cleveland *Iron Trade Review* says: "There have been good opportunities in the past year for a study of the methods and the results of combines in the iron and steel trade. On Bessemer ore, steel billets; beams and channels, bar iron, hoop iron and steel, shafting and wire nails and cut nails, prices have been fixed for a number of months by agreement among producers, some of the arrangements extending back into 1895. We leave out of the account the steel-rail pool, which has won a title to permanence by years of wise and conservative action. As to the probable duration of the other arrangements, there has been a variety of expression. Some sweeping attacks have been made on all the pools, and a short life has been predicted for each in turn. These predictions have been based on the general proposition that pools help to build up new competition, which cuts the market and compels eventual retaliation by the original producers, leaving the last condition of the market worse than the first. Another reason for asserting that combinations will be but temporary is that this has been their history almost universally. A third reason for expecting collapse is that time accentuates the diversities of interest in a pool membership that considerations of mutual interest may suppress temporarily.

"It is true that the billet pool and the nail pool have stimulated an increase of producing capacity. The former has made competitors of some who were formerly customers. Owing to the large investment involved, the condition of the money market, and the relatively larger call to-day for open-hearth steel, it has not led to the building of additional Bessemer plants, and in open-hearth but two plants are under way that can be traced directly to the advance in price made by the pool, though it is certain that other projects will be pushed after election. Thus far no signs appear pointing to a dissolution; on the contrary, since the appointment of a committee to handle grievances, the organization has given greater promise of permanence,

"The nail pool, from the unreasonable extent of its advances, the misunderstandings and suspicions that grew out of a base price at which no nails of any sizes were ever sold, and its effort to control every avenue of the trade, including the manufacture of nail machines, has drawn more criticism than any other. Its rapid pushing up of prices greatly stimulated production. Manufacturers in other lines put in wire nail machines, and at the large profits possible soon paid for their machines and were thus in a position to stay in the business indefinitely. One after another of these outside concerns was bought up or arranged with, but the crop was still plentiful, and though the pool committee has been busy corraling small competitors, the outside product is still a trouble-making factor. It is a serious question, indeed, whether the burdens the pool has assumed in its various contracts with former competitors are not so heavy that collapse must come soon. The failure of repeated efforts to form pools among wire rod and wire manufacturers has aided in thwarting the plans of the pool for complete control. It was the failure to induce wire manufacturers who made no nails to refuse to sell to non-pool nail-makers that led the pool to its last coup—the control of the output of the principal wire nail machine manufacturers. When the collapse comes, be it soon or late, there will be a vastly increased capacity for nail manufacture over anything the country has known, and until consumption can overtake it, though demand may expand with the release of output restrictions, profits will be an uncertain quantity.

"The bar-iron pool has been moderate in its ideas as to price, hedged in by the competition of rolled steel from concerns having their own converters and, up to the last wage settlement, by the advances in wages that accompanied every advance in the price of iron. There has been no stimulus to the building of new rolling mills; and should the agreement be terminated—as is not likely to happen soon, with a revival in business so close at hand—there would be no trail of demoralization from new-made competition. While some permanent loss of trade may have resulted from the encroachment of cheap steel encouraged by a fixed price on bar iron, the pool has done a good work in steadying the trade and in correcting the abuse of contract violations that had grown to be a crying evil.

"An expansion of business in various lines may bring developments in the conduct of the various combinations quite different from what has appeared in the past six months. But in the face of the record thus far made, no generalization about combinations is just. Each must be judged by its fruits and by the conditions that produced it."

DEALINGS IN FUTURES.

In the recent meeting of the Economic Section of the British Association for the Advancement of Science, Mr. Elijah Helm described the origin and purpose of dealings in futures in the commercial markets. The Glasgow *Herald* says he declared the system to be "a method of insurance to producers and distributors against the risks of fluctuating prices. The system had accentuated the fall of prices of commodities within the last twenty years. Its development had been assisted by the telegraph and the telephone. It could be differentiated from pure gambling. He maintained that the system properly organized and controlled was, on the whole, economically beneficial, and that the demand for its legislative suppression was not justifiable.

"Mr. E. H. Rathbone, in dealing especially with the subject of grain futures, their effects and tendencies, said that as long as mankind retained an inherent insatiable passion for speculation he could imagine no cheaper means of distribution than that in which option trading played so important a part. The introduction of the system during the last ten years in the grain trade had increased the tendency already in operation to reduce the margin of profit in distribution to a minimum. It was evident that this speculative trading by thus reducing margins, and by making large operations less risky and dangerous, was steadily concentrating the grain trade of England into fewer and fewer hands. There were unmistakable signs that this concentration might eventually take the form of large trusts or syndicates for the distribution of our breadstuffs. As long as England followed her free trade principles it was unlikely that any such abuse of their powers would be possible as we were familiar with in protectionist America.

"Mr. Charles Stewart followed with a paper on cotton futures, describing what they are, and how they operate in practice. He explained the utility of cotton futures as 'hedges'—first as sales, second as purchases. Mr. Stewart proceeded to claim that the system of dealing in futures was the natural outcome of the expansion of trade, particularly the future of the development of such by telegraphy. The increase in the size of the crops, the small margin of present-day profits, the greater speed in transit, the increased magnitude of producing concerns, and the necessarily greater increase in the capital for their requirements were all demonstrated in the explanations given of the practice. In the course of discussion it was pointed out that but for the system described planters would run serious risks, as they used to do in old times, when every producer sent his cotton to the market at the same time, and so depressed prices; whereas now a planter could sell his cotton whilst the crop was growing.

"Mr. Silverberg afterwards read a more general paper on the influence of futures on trade and agriculture."

SIBERIA AS A COMPETITOR.

The *Diplomatic and Consular Review* says: "The report of Consul-General Karel on the new industries of Siberia must awaken renewed interest, not only in Russia, but to the rest of the world. And, as in this age, when capital and labor is so easily transported from place to place, the opening of the Transsiberian Railroad is an event of great importance. Siberia, with its large area, equal to the United States, with its virgin soil and undeveloped mines, with railroads to transport all the means of production—both capital and labor—with Europe awakening to the fact that it is to be an enormous field for the investment of European surplus capital, we must face the fact that she will soon be a formidable competitor with ourselves in foreign markets. She will soon be a menace to our agricultural and many of our manufacturing interests.

"Russia in some ways has advantages in production enjoyed by no other civilized country. The cost of production there is not increased by strikes, trade unions, restrictive legislation upon hours of work, and other drawbacks that make it more difficult for American merchants to compete with foreigners in other markets. There is no law in Russia forbidding the importation of Chinese, the cheapest form of labor. The Chinese statesman, Li Hung Chang, has shown us how the restriction of Chinese labor has increased the cost of production in everything produced here. While it is the part of statesmanship to see that no class is sacrificed, and as far as possible to maintain a high rate of wages for the laboring class, it must not be so obstructive in its effects as to drive capital to other lands, thereby lessening the wage fund which American labor is paid. China, with her myriad hordes, stretches for thousands of miles along the southern Siberian frontier. It is on that account that the opening of Siberia is an immediate danger to the United States. It will never want for labor as we did in the development of our great west. Since the worst may not yet have come for our agriculturists and western farmers, with the opening of the vast country so favorable to production at a low cost, it behooves us not to indulge in amateurish legislation that might increase the cost of our products in the home and foreign markets.

"We must remember that England had her day of terrible agricultural depression when our new lands were opened. It is to be hoped that we can go through ours with the same steadiness and conservatism that she did, and with the same conservatism reject all mischievous revolutionary panaceas in our legislation to cure an evil simply caused by the laws of trade."

LONDON'S FRESH CAPITAL INVESTMENTS.

The London *Economist* says that a decided lull has taken place in the number of appeals for new capital during the past two months, but previous to that the applications were on a very large scale. Two foreign loans of considerable amount have been issued, and altogether the total sum offered for subscription in the quarter reaches the substantial amount of £41,287,000. This is £7,000,000 less than the total for the June quarter, but with one other exception is larger than in any quarter since 1892. The subjoined statement shows the amount offered for public subscription in each quarter:

	1896.	1895.	1894.
First quarter	£30,925,000	£28,479,000	£11,358,000
Second quarter	48,569,000	23,710,000	19,719,000
Third quarter	41,287,200	32,742,000	18,140,000
Fourth quarter	....	19,759,000	42,618,000
	....	£104,690,000	£91,835,000

"It will be seen that in the nine months of the current year more capital has been applied for than in any whole year of the three shown in our table. No doubt the total will be further swollen by a substantial amount before the end of the year, as the present lull is due principally to the advent of the holiday season, though a new factor in the shape of dearer money has appeared, which may have an effect in keeping back some issues that would have stood more chance of success had money remained the drug it has been for nearly three years past. Proceeding to analyze the applications of the past quarter, we find that, apart from the foreign loans, the amount has been spread over a wide range of enterprises, no one category absorbing more than £4,000,000 out of the remaining total of £31,000,000. The statement is as follows:

Foreign government loans	£9,922,000
Indian and colonial government loans	228,000
British corporation stocks	1,726,000
Colonial and foreign corporations	592,000
Home railways	1,590,000
Indian and colonial railways	2,000,000
Foreign railways	219,000
Mining companies—Westralian	1,427,000
New Zealand	583,000
Others	2,152,000
Land and finance companies	2,608,000
Cycles and appliances	2,845,000
Breweries and distilleries	3,880,000
Companies to acquire patents	737,000
Stores and trading companies	1,913,000
Manufacturing companies	2,875,000
Hotels, theatres and entertainments	792,000
Lighting and water	1,112,000
Tea and coffee	1,234,000
Docks, harbors and shipping	1,144,000
Miscellaneous	1,688,000
Total	£41,287,000

"The £10,000,000 raised by foreign governments consisted of two items only—£4,000,000 applied for by Chili, and £6,000,000 by China to make up the £16,000,000 of the indemnity loan, of which £10,000,000 were issued earlier in the year. Both of these loans were offered to the public slightly under par, the rate of interest on each being 5 per cent. The only colonial loan placed during the quarter was a small issue of Newfoundland stock. British municipalities figure for £1,726,000, more than one-half of this being in Metropolitan 2½ per cent. stock, which realized nearly 104½ per cent. The issues by British railways have comprised a large amount of Caledonian ordinary stock and a sum of £450,000 Great Eastern preference stock, while railway enterprise in our dependencies is represented by one item of £2,000,000, raised by the Burma Railways Company. The field which has again produced the greatest number of company promotions is the West Australian gold mining industry."

THE JAPANESE-CHINESE WAR AND COMMERCE.

The Japan *Weekly Mail* says: "The Bureau of Taxation in the Department of Finance has compiled a concise review as to the effect of the war on the foreign commerce of Japan during the last year. It is epitomized as follows: 1. The sudden increase in the demand for clothing and other materials needed in the army and navy, and the extraordinary increase in the import of these materials, must be considered as the greatest influence that the war exerted on the foreign commerce of the country. 2. Since the outbreak of the war, in consequence of the departure of Chinese merchants from Korea, who virtually monopolized the markets there, the influence of Japanese merchants in that peninsula became paramount and led to an expansion in the volume of commercial transactions between Japan and Korea. 3. The removal of the absurd delusion that foreigners entertained of Japan, namely, that her civilization was superficial and the empire was no match for the colossus of China, the significant removal of this idea by the glorious issue of the war, tended considerably toward increasing the value of things Japanese, so that foreigners began to inquire for the products of the victorious country. 4. The expectation that every trade and industry in Japan would be stimulated into excessive activity, even beyond the degree of necessity and usefulness, tended to increase the volume of imports. 5. The unusual wages that military coolies and common people earned during the war increased their purchasing powers, and this ultimately tended to encourage imports. 6. The war has enhanced the value of Japanese goods, and eliminated, to a certain extent, the vicious customs that previously existed between foreign and Japanese merchants engaged in Japanese commerce. So many laborers were drawn off to the seat of war, or requisitioned for work connected with it, that the Japanese merchants, who were only too ready to accept any cheap order, regardless how such goods would affect the reputation of Japanese products, could not undertake to supply these demands. Foreigners, also, were fully aware of this fact, and did not press for delivery of shoddy goods. 7. The requisition of thousands of men for the war affected the production of Japanese commodities, and the excess of demand over supply tended to raise the prices of goods. 8. The rise in interest on money during the war more or less checked free investment in works of production, so that the export of goods was, to a certain extent, reduced. 9. The requisition of steamers for government service considerably interfered with the shipment of goods, so that the market rose and obstructed the export of commodities. 10. During the war the people naturally strove to cut down all superfluous expenditures as much as possible, and this frame of mind must have, to a certain extent, interfered with the purchase of imported goods. 11. The payment of the war indemnity by China and the consequent derangement of the silver market must have affected the commercial relations of Japan 12. The interference of the three powers and the retrocession of the Liaotung peninsula led the people to be on their guard and convinced them of the absolute necessity of maturing and developing the resources of the country. This may have temporarily affected the sale of foreign goods. 13. The departure of Chinese merchants from Japan largely affected commercial transactions between Japan and China, though it was found at the end of the year that the total trade did not suffer a great diminution as compared with ordinary years.

"The report then proceeds to enumerate the principal commodities whose export or import show either an increase or a decrease in consequence of the war. Commodities whose import was augmented by the war were woolen cloth, flannel, blankets, serges, shirtings and T-cloths, hempen and cotton canvas, leather, coal, iron and steel articles, zinc, lead, watches, liquors, hemp and flax, cotton and cotton yarns, wool and worsted, paper. Commodities whose export was augmented by the war were liquors and tobacco (for consumption of officers and men in Korea and China), coal, camphor and fine art goods. Commodities whose import was decreased by the war were beans and machinery. Commodities whose export was lessened by the war were timber and dried cuttlefish, both owing to the scarcity of labor. The commodities whose export or import was influenced by the restoration of peace and show an increase were: Imports, cotton and woolen fabrics and mixed goods, cotton-silk goods, tobacco, watches, raw cotton, wool and worsted, hempen cloth, aniline dyes, liquors. Export, fine art goods. Reductions in imports were in rice, owing to the bettering of the condition of the poorer classes, the principal consumers of inferior imported rice. There was a reduced export of cotton yarns, owing to the excessive home demand. Taken as a whole, the war, by enhancing the market price of commodities, interfered with the export of goods, while it facilitated the import of foreign stuffs, owing to the requirements of the army and the public at large. The influence of the war upon Japan's foreign commerce does not end here; there are other factors whose influence will continue for a long time. The annexation of Formosa is the most important of these. The sudden expansion of shipping is another, as also the steady extension of railways. Most of the steamers purchased by the country during the war are of a size not suited for the coasting trade, but for navigation on the high seas. Naturally, therefore, those steamers will be applied to the expansion of marine communications between Japan and distant countries. The war has thoroughly convinced the country of the absolute necessity for building satisfactory railways. The unusual prosperity that the railways enjoyed subsequent to the war also encouraged railway enterprise. The following figures show the number of steamers that were added to Japan's shipping register during the two years 1894 and 1895:

	No. of steamers.	*Cost, yen.*
First half of 1894	6	898,000
Second half of 1894	32	7,304,549
First half of 1895	26	3,419,790
Second half of 1895	13	1,280,765

"In the third place, the indemnity which Japan is to receive from China will not only promote the wealth of the country, but will directly and indirectly develop its productive power and thus tend to augment the volume of the export trade. In the fourth place, the opening of four new inland ports in China, as the result of the victory of Japan, will also tend to promote commercial relations between the two countries. In the fifth place, the extraordinary demand that the war made on woolen fabrics, and the consequent unusual prosperity that woolen weavers at home enjoyed, enabled them to expand the scope of their business. At the same time the necessity for starting an iron foundry, so long spoken of, became more urgent. When these two industries are established on a firm basis, the features of Japanese commerce will be greatly changed. In short, the war gave an impetus to commerce in this country. But it is not unattended by evils, the most important being the rise in the cost of production and living."

GENERAL LAND OFFICE REPORT.

Commissioner Lamoreaux, of the General Land Office, has made his annual report to the Secretary of the Interior for the past fiscal year. "The total land selections during the year were 13,209,000 acres, of which 4,830,915 were homestead entries, and 6,789,591 railroad selections. The increase in selections over the previous year was 4,802,673 acres. The cash receipts were $2,106,361, an increase of $72,907. Lands patented to railroads in satisfaction of grants, 15,527,844 acres, an increase of 7,343,508 acres over last year; agricultural patents, 5,470,400, an increase of 2,628,480 acres. The total number of acres patented was 22,669,989. The total vacant public land in the United States is 600,040,671 acres, of which 316,651,861 are surveyed and 283,388,810 unsurveyed. The amount of land surveyed during the year was 8,908,808 acres. Considerable attention has been given during the year to correct surveying, and in nearly every public land state reserves have been ordered upon the reports of the examiners. Commissioner Lamoreaux makes the following recommendations: That the appropriations for surveys and resurveys of public land be made continuous; that laws be passed creating the office of surveyor-general of Alaska; establishing a national irrigation commission; for the compulsory attendance of witnesses at hearings in contests before the district land officers; for the protection of timber on public forest reservations; to regulate timber on public lands not embraced within forest reservations, and for the protection of timber and other growth on the public domain from destruction by fire. Nearly all the legislation recommended is now pending in Congress. The report contains a review of the entire work of the General Land Office, together with the effect of past legislation and decisions of the Supreme Court on land cases."

PRICES OF FARM STAPLES FOR THIRTY YEARS.

The *American Agriculturist* says: "In December of each year since 1866 the United States Department of Agriculture has published the average farm price of staple crops by states; that is, the average price at which such stuff was selling on the farms, not in the markets. The average of these prices by states gives the average farm price for the whole United States. These prices, with area and total yield of principal crops from 1866 to 1895 inclusive, have been compiled and are published in circular No. 1 of the Statistical Division of the Department of Agriculture at Washington. From it we have carefully compiled the following statements:

AVERAGE PRICES COMPARED BY PERIODS.

Year.	Corn, bush.	Wheat, bush.	Oats, bush.	Potatoes, bush.	Tobacco, lbs.	Cotton, lbs.	Hay, per ton.
1866–69	52c.	$1.18	41c.	53c.	9.2c.	23.3c.	$9.93
1870–73	42	1.04	34	58	8.6	16.1	12.50
1874–80	35	.95	31	51	6.5	11.3	8.99
1881–85	45	.88	35	55	8.6	11.0	9.33
1886–90	39	.77	31	52	8.6	10.4	9.06
1891–95	38	.60	29	45	7.4	7.8	8.52

AVERAGE ANNUAL PRODUCTION BY PERIODS.

[In millions of bushels, pounds, bales and tons.]

Year.	Corn, bush.	Wheat, bush.	Oats, bush.	Potatoes, bush.	Tobacco, lbs.	Cotton, bales.	Hay, tons.
1866–69	854	212	273	111	324	2.3	23
1870–73	1,028	250	261	114	307	3.6	24
1874–80	1,456	404	384	154	403	4.9	34
1881–85	1,619	436	538	171	504	6.1	43
1886–90	1,742	444	652	168	405	6.9	43
1891–95	1,734	490	705	217	461	8.3	56

"On some crops as good prices were received in the five years ended with 1885 as during the four years after the war, both stated on a gold basis. During the good times of the early eighties oats averaged higher than from 1870 to 1873 inclusive, tobacco was fully as high, potatoes about as high, while corn sold for 3c. above the prices of 1870–73. Wheat averaged 16c. less, cotton 5c. less, and hay $3 per ton less, but their decline is partly due to the fact that during the period from 1873 to 1885 the hay and cotton production nearly doubled, and wheat jumped from 250,000,000 to an annual yield of 436,000,000 bushels. This increase was of itself enough to seriously influence prices.

"Now if demonetization of silver is what knocked down prices, they should have been lower in the early eighties than in the previous period, instead of being higher. Most crops, except wheat, maintained a fairly high average value in the face of immense increase in production until early in the nineties. And the average for the past five years compares closely with mean values for the period 1886–90. Wheat is the greatest exception, cotton being the only other that shows much of a decline. But the increase in wheat crops abroad (especially in Russia and Argentina) is notorious, while the supply of cotton has increased faster than prices have declined.

"Prices for the crops of 1895 were in many respects the lowest on record, but the supply was much larger than usual. Domestic demand was reduced because of 'hard times,' and foreign markets were well supplied from other sources. It is surprising, in the face of production increasing more rapidly than population and the foreign market for our surplus contracting by reason of supplies from other sections, that produce values should for the past five years come so close to the average farm prices of more than twenty years ago."

BLOCKS OF TEA AS CURRENCY.

In *Cassier's Magazine* for October there is an interesting article by F. F. Prentiss, entitled "Engineering Notes from Japan and China." In his description of the customs and business methods which prevail at Foo Choo, China, "what Mr. Prentiss says of the form of currency used at Foo Choo and in the contiguous territory has special interest at this time in this country. 'The tea business,' writes Mr. Prentiss, 'seemed to be in the hands of the Russians. They have here two large factories for making tea cakes. The tea is ground fine, almost to a powder, and then, by powerful hydraulic presses, is forced into blocks that are so hard that it is impossible to break them without a blow with a hammer. These are sent north through the great Chinese wall into Mongolia and Siberia, and pass current as money. In many localities it is the only currency used. As the blocks leave Foo Choo they weigh the same to an ounce, and the fortunate merchants do not have the vexed American money question of 16 to 1 to disturb their dreams. As the money circulates around, however, pieces are chopped off to replenish the tea pots, and the blocks depreciate in value in proportion to the chunks taken.' This novel currency has at least the merit of honesty, as it passes for its intrinsic value, measured by a fixed standard."

BUSINESS FAILURES.

THE WEEK'S FAILURES, UNITED STATES AND CANADA.

States and territories.	Week ending Oct. 8, 1896.	Previous week, 1896.	Weeks corresponding to this week— 1895.	1894.	1893.	1892.

In the United States about 75 per cent. of the total number of concerns failing had $5,000 or less, and 16 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

SPECIAL NOTICES.

MR. BOOKKEEPER,

do you know what the Comptometer is? It costs you nothing to find out. It will help you out on that trial balance. It insures accuracy. Is twice as rapid as the best accountant and relieves all nervous and mental strain.

WRITE FOR PAMPHLET.

FELT & TARRANT MFG. CO.,

52-56 ILLINOIS STREET, CHICAGO.

HEADQUARTERS FOR TYPEWRITER RIBBONS

FOR ALL MACHINES,

Carbon, Manifold and full line of TYPEWRITER LINEN Papers, warranted to give absolute satisfaction. Please send for samples, prices and circular of Keating's Cleaning Brush.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 17, 1896.

Gold shipments from London to New York have assumed large proportions during the present week. The total announcements aggregate $7,000,000 for the week to date, and it is understood that considerable further shipments will be made early next week. The condition of the exchange market favors the continuance of the movement of specie this way, and reflects the foreign buying of grain and other breadstuffs. The Bank of England has not advanced its discount rate, though both in London and on the continent money rates have assumed a very firm appearance and advanced largely on the prospective flow of specie to this country. On the other hand, the present influx of gold does not seem to add to the Treasury gold reserves. In fact, the amount of free gold held by the Treasury has fallen off slightly during the week, being by the last official accounts a little less than $123,000,000, and the existence of a premium for cash gold of ¼ to ⅜ points to the desire of various interests to strengthen their position pending the election and explains furthermore why current receipts of gold from abroad are not turned into the Treasury.

Nothing is more common than denunciations by supporters of the Chicago platform of the bankers at New York for making "raids upon the Treasury." No person acquainted with the facts, of course, can be misled by such nonsense as this, but it is likely enough that some persons not informed about the matter may be deceived, and in order to do something to disabuse the minds of such people, Assistant-Secretary Curtis has written a letter to the Assistant Secretary of Agriculture containing some considerations bearing on the subject. Mr. Curtis says that the people engaged in the banking business in New York may be divided into three classes: First, the officers of the regular banks of deposit or issue, including the national banks; second, the dealers in securities, some of whom have foreign connections through whom they market a large amount of securities, and upon whom they draw a corresponding amount of exchange in payment for securities sold abroad, and to whom they remit exchange or gold in payment for securities sold here; third, agencies or branches of foreign houses, who are, perhaps, also dealers in securities, but whose main business is buying and selling exchange on Europe for the profit which can be made in the operation itself.

The first class are, he says, especially interested in the general prosperity of the country, and in keeping up the value of securities, because if there is a fall in securities held by them as collateral they are compelled to call in their outstanding loans, which reduces their lines of credit, diminishes their profits, prevents them from discounting commercial paper, restricts mercantile and industrial enterprise, and in the end creates failures in business and general financial and commercial distress. The second class are directly interested in keeping up the value of securities in this country, which they have largely sold abroad, and their interest is to avoid gold exports and the public apprehension arising from a reduction of the gold reserve. The third class buy or sell exchange whenever an opportunity for profit offers. If there are few commercial bills to be had in the market, and the demand by remitters is great, exchange rates rise, and if dealers having credit abroad find that they can sell their bills at a higher price than the probable cost to them of withdrawing gold from the Treasury and shipping it abroad to meet their bills at maturity, they do so, thus making a profit on the transaction.

Each shipment of gold made, the Assistant Secretary continues, usually represents in the aggregate a large number of single transactions. One concern may sell a million dollars of exchange in one day, but it may be represented by 150 to 250 different bills, running from £100 sterling upward, and they pay their bills abroad by shipping gold for that purpose, which they draw out of the Treasury in one sum and send in one shipment. It will thus be seen that a great majority of the bankers are pecuniarily interested in keeping the gold reserve up to its full amount, and for this reason they have been willing in the past and are still willing to make considerable sacrifices, and in order to prevent shipments of gold have contributed large amounts of money to pay the dealers in foreign exchange the profit they would have made by such shipments. This was notably the case in the operations of the so-called syndicate which bought the bonds of the government under the contract of February 8, 1895, and again in the early part of this summer Mr. Curtis says that, although withdrawals for export have been going on for several years, it is only within two years that an apprehension that the government might be unable to redeem its obligations in gold has caused the withdrawals for any other purpose, and at no time has there been any evidence that withdrawals of gold from the Treasury were made for the purpose of affecting the markets. Finally, Mr. Curtis says, it must not be forgotten that the confidence in the situation which has placed the country in its present satisfactory condition regarding its gold reserve was largely due to the efforts of the bankers of New York in the early summer.

The most striking feature of the preliminary foreign trade statistics of the United States for September and the nine months ending therewith, is the excess of exports over imports of merchandise. The exports for September were valued at $85,098,594, which represents an increase of over $26,500,000 as compared with the corresponding month of last year. The imports, on the other hand, were valued at $50,825,705, which represents a decrease of nearly $14,500,000 as compared with September, 1895. For both months the dutiable exceeded the duty-free imports in value, the excess amounting last month to over $2,900,000, as compared with over $4,100,000 in September, 1895. The exports last month showed an excess over the imports amounting to $34,272,889, whereas in September, 1895, the imports showed an excess of $6,765,257 over the exports. The feature in the movement of the precious metals was the excess of imports over exports of gold for the month, an excess which amounted to $34,098,080, as compared with an excess of exports amounting in September of last year to $16,674,609.

For the nine months ending with September the exports of merchandise were valued at $666,029,386, which represented an increase of over $108,100,000 as compared with the corresponding period of 1895. The imports, on the other hand, were valued at $522,058,144, which represents a decrease of nearly $79,000,000 as compared with the corresponding period of last year. During both periods the dutiable goods exceeded those free of duty, the excess amounting to over $45,600,000 in nine months of 1896, as compared with nearly $31,000,000 in nine months of 1895. There was an excess of exports over imports amounting to $143,971,242 in the nine months just ended, whereas in the corresponding nine months of last year the imports exceeded the exports by $43,115,673. The exports of gold for the nine months amounted to $55,570,421, which represents a decrease of over $17,600,000 as compared with the corresponding period of 1895. The imports, on the other hand, amounted to $64,888,856, which represents an increase of over $36,000,000 as compared with the corresponding period of last year. The imports showed an excess of $9,318,435 over the exports for the nine months just ended, as compared with an excess of exports amounting to $44,350,343 in nine months of 1895.

Rumors have gained currency for some time past that the Venezuelan Boundary Commission had come to a decision regarding the merits of the Venezuelan dispute, and the presence of Mr. Chamberlain in the United States recently was regarded as furnishing some ground for the rumor. It appears, however, from a statement by Secretary Malet-Prevost, that the rumors are without foundation. The commission, he says, is not yet in possession of all the facts necessary to form a definite judgment, and will not be until the return of Professor Burr from Europe, about the end of this month. He is to bring with him new and important historical information which must be carefully examined before any decision can be arrived at. Any statements, therefore, to the effect that a decision has been reached are entirely premature. There seems, however, to be little reason to doubt that the report of the commission will be ready by the time Congress meets, if it is not in the hands of the President before that time.

A great amount of confusion seems to exist regarding the mission of the dispatch boat Bancroft, which has just arrived at Smyrna. The statement was made early in the week that her commander had orders to pass the Dardanelles in any event, and that in case of resistance by the Turkish authorities the Mediterranean fleet under Admiral Selfridge had orders to support the Bancroft in its attempt to force a passage. This rather sensational story appears to be unfounded, judging from the denials which have appeared, unofficial, it is true, though apparently made upon high authority. All that can be regarded as certain is that the Bancroft has been ordered to Constantinople, where it is to be employed on guard duty under the orders of Minister Terrell. It is probable that the entrance of the Bancroft could be arranged with the consent of the Turkish government in case it is desired; a forcing of the passage of the Dardanelles could scarcely be regarded in any other light than as an act of war.

THE RISING TENDENCY OF PRICES.

Wheat crop shortages in Russia, India, Argentina and elsewhere, followed by an extraordinary demand for farm produce in the United States, are stimulating advances for wheat and other cereals. This is having a sympathetic influence on other farm produce, is drawing ocean tonnage to American ports in search of cargoes, and at this writing has the appearance of being very like the turning point in the general movement of prices. Quotations have declined in almost all lines, notably since 1892, and while some of them still continue on a downward course, particularly that for silver, it is striking to note the variety of staples, quotations for which are firmly held or tend upward, shown by reference to BRADSTREET'S table of prices of 108 raw and manufactured products, produce, cattle and meats, at quarterly intervals during the past five years.

It will be recalled that the calendar year 1892 was one of comparative business prosperity. Our exports and imports were heavy, our total volume of domestic commerce was of unexampled proportions, aggregate bank clearings were unprecedentedly large, and factories, mills and shops reported full time and no idle machinery.

The continued coinage of more silver by the operation of the Sherman law, followed by well-grounded fears of our inability to continue to maintain silver dollars at a parity with gold if the stream of new silver dollars was not dammed, together with the disarrangement to trade, naturally, after a second revision of the tariff within four years, were sufficient to unsettle confidence in financial circles—confidence in our ability to maintain the existing standard of value—and with the crash in industrial securities in May, 1893, the panic was ushered in. It continued until late in that year, and, as was to be expected, the following twelve-month constituted a period of commercial and financial prostration. It was confidently expected that 1895 would bring the beginnings of a business revival. Judged by the second year, after preceding periods of panic, it was a fair inference, and the premature boom in iron and steel, between March and September, 1895, seemed to warrant the expectation.

But the little of renewed activity which showed itself completely disappeared in the autumn of 1895, and the past year has been a period of waiting and disappointment.

The repeal of one clause of the Sherman law in 1893 removed in part a cause of disaster in commercial and industrial circles, but beginning promptly with 1896 the "friends of silver" in and out of Congress, in all political parties, began a more active propoganda in favor of the free and unlimited coinage of silver at the ratio of 16 to 1 with gold, on which the presidential campaign is being fought out. This should make it plain why business has continued extremely dull, why new enterprises are rarely undertaken, why merchants buy from hand to mouth only, why collections have been difficult to make, why many continue idle—in short, why the "hard times" which followed the panic of 1893 still cling to us.

The presidential campaign is now almost over, and those who have confidence to believe the results of the election will effectually dispose of the fiat silver money craze, as the greenback heresy was killed twenty years ago, are among those who think that a pronounced revival in business is close upon us. The shelves of the country storekeeper, as a rule, are almost bare; he has been buying small bills of goods, for immediate wants only, for three or four years, and waits only to anticipate his wants until assured not only of the permanence of the existing standard of value but of the likelihood of starting the wheels of idle industries throughout the land.

At this point one again recalls the enlarged demand for our surplus wheat, which has been referred to. In 1879–80, just prior to the great revival in commerce and manufactures of 1881–83, the stimulus to trade was applied in almost precisely the same manner, by an unexpectedly heavy demand for our wheat from all wheat-importing countries, due to short crops in wheat-exporting countries other than the United States. The claim is made, based on government and other reports, that our wheat crop is short this year. Be that as it may, it is not so short but we shall have an average surplus available for export, and, if prices warrant it, probably a little more than the average shipped abroad in recent years. Current wheat estimates place the yield in the United States in 1896 at 437,000,000 bushels, and there are excellent reasons for believing the real total is more likely to equal 470,000,000 bushels than to fall below it. This, with the surplus carried over on July 1 last, will furnish sufficient to enable us to profit materially from what appears likely to be a period of extra dependence by foreign countries on wheat supplies in the United States.

Reference to the accompanying tabular exhibit shows that prices of only 31 staples and products named are higher October 1, 1896, than on October 1, 1895, while as compared with quotations on July 1, 1896, only three months ago, prices for 34 are higher now than then.

The change in the general price situation may be further emphasized by noting that while only 11 articles, products, etc., are the same in price one year ago and on October 1, 1896, prices of 28 are the same as they were three months ago. But most significant of all, there are 66 lower quotations when compared with October, 1895, but only 41 contrasted with prices on July 1, 1896.

The following is the list of staples, produce, etc., prices for which on October 1, 1896, are higher, respectively, than on July 1 last, than in October 1 in 1895, 1894, 1893 and 1892:

THE LIST, QUOTATIONS FOR WHICH, ON OCTOBER 1, 1896, WERE HIGHER THAN ON

July 1, 1896.	*October* 1, 1895.	*October* 1, 1894.	*October* 1, 1893.	*October* 1, 1892.

Prices, therefore, judged by the list and comparisons prepared by BRADSTREET'S, show only a modest list of advances on October 1, 1896, compared with the like date in 1892, the next preceding year of active, prosperous trade and a high range of values. The only important farm products higher now than then appear to be wheat, cotton and rice, on short crops, and hides. Higher priced petroleum is also due to relatively decreased supplies. The gains in prices for a few drugs and chemicals is noteworthy, but higher priced rubber is, of course, the outcome in part of the enormously increased demand, based on the extension of the bicycle industry. Fewer than one-fifth of the articles, products, etc., named in the accompanying exhibit, are higher to-day than on October 1, 1892, when quotations averaged high and trade large in volume.

There had not been time for prices of products to shrink materially by October 1 in 1893, so that quotations on October 1, 1896, show only 24, fewer than one-quarter of the whole number, higher now than three years ago. Among the more noteworthy of these, in addition to those which are higher than on October 1, 1892, are wheat flour, steel billets, copper and glass.

Contrasted with October 1, 1894, when prices had been declining for more than a year, the list of products, etc., which are higher on October 1, 1896, is much longer, numbering 36, among them, notably, Australian wool, iron ore, Bessemer pig iron, steel rails and beams, silver, coal and hay, in addition to most of those already named.

The changes are not great when a list is made of higher quotations on October 1 this year and the like date in 1895, the more conspicuous higher prices, due largely, of course, to reaction in quotations late in 1895, being rye, beeves, sheep, mutton, eggs, hams, cheese, potatoes, onions, apples and hemlock lumber.

There being 84 lower prices on October 1 this year than in 1892, when business was prosperous, perhaps no better illustration of the lines which have suffered from depreciation in values can be given than to reproduce the list, which is as follows:

LOWER ON OCTOBER 1, 1896, THAN 1892.

Food Products.—Wheat flour, Indian corn, barley, rye, beef carcasses, hogs, mutton, barreled beef, pork, bacon, hams, lard, butter, cheese, milk, eggs, codfish, sugar, tea, coffee, salt, beans, peas, potatoes, onions, apples, cranberries and lemons.

Textiles, Leather, etc.—Wool, domestic and Australian; silk, flax, hemp, print cloths, standard and southern sheetings, ginghams, union and oak leather.

Metals, Coal and Ore.—Iron ore, No. 1 pig iron, southern pig iron, Bessemer pig iron, steel billets, rails and beams, tinplates, tin, silver, aluminium, copper, lead, quicksilver, anthracite and bituminous coal and southern coke.

Oils.—Linseed, cottonseed, castor and olive.

Building Materials.—Tar, brick, lime, glass, and pine, spruce and hemlock lumber.

Chemicals.—Bicarbonate of soda, borax, caustic soda, nitric and sulphuric acids.

Miscellaneous.—Turpentine, phosphate rock, hops, tobacco, ground bone, paper and cottonseed.

This long list becomes the more instructive respecting the drop in prices, when reference is made to the list given herewith of advances in quotations on October 1, 1896, as compared with the like date in 1892, in in which wheat, rice and cotton are the only agricultural staples of importance showing advances over the level of four years ago; hides, petroleum, nails and rubber the only miscellaneous staples, and alum, alcohol, opium and quinine among drugs and chemicals.

Prices contrasted for October 1, 1896, and October 1, 1893, show 77 lower now than at the close of the panic three years ago, 7 fewer than when compared with October 1, 1892, for the headlong downward movement of prices did not show itself until 1894–95.

The list of decreases to-day as compared with three years ago is quite similar to that given showing decreases contrasted with four years ago. It omits wheat flour, union leather, flax, standard sheetings, iron ore, steel billets, copper, glass, carbolic, nitric and sulphuric acids, and adds mackerel, peanuts, alum and opium.

Comparing prices October 1, 1896, with those on October 1, 1894, two years ago, only 60 decreases are shown, owing to the contrast being with a period of greatly reduced quotations. From the list of decreases when compared with October 1, 1893, the comparison between October 1, 1896, and October 1, 1894, shows the omission of hog carcasses, mackerel, peas, onions, peanuts, Australian wool, ginghams and southern sheetings, No. 1 pig iron, Bessemer pig iron, steel rails and beams, silver, anthracite coal, spruce and hemlock lumber, alum, carbolic acid, caustic soda, opium, ground bone and hops, and adds rice, cranberries, lemons, alcohol and quinine.

The modest upward movement of some staple prices in 1895 is shown by the fact that while there are 60 decreases of quotations to-day as compared with October 1, 1894, there are 66 when the contrast is made with October 1, 1895. Decreases in prices within the year omit from the list showing decreases, as compared with two years ago, rye, live cattle and sheep, mutton, eggs, hams, cheese, salt, rice, potatoes, apples, lime, borax and cotton seed, and add a falling away in quotations for mackerel, peanuts, leather, cotton, flax, standard and southern sheetings, ginghams, Nos. 1 and 2, and Bessemer pig iron, steel billets and beams, silver, copper, spruce lumber, ground bone and hay.

The stronger position of prices late in the current year is shown by the relatively small number of decreases when compared with quotations three months ago, and an almost equal number of increases and of prices which have not changed.

QUOTATIONS OCTOBER 1, COMPARED WITH JULY 1, 1896,

Higher.	*Lower.*	*Unchanged.*

	Ground bone.	
	Hay.	

With the stability of the existing standard of value assured, with the shelves of interior merchants almost denuded of supplies except for nearby wants, with a return of that confidence which is necessary to form the basis of credit, the evidence herewith presented of the tendency of prices to advance would seem to indicate that low-water mark has finally been reached, and that whether we are to witness a rapidly rising tide of trade depends very largely upon ourselves.

COMPARATIVE PRICES OF 108 STAPLE ARTICLES, RAW AND MANUFACTURED PRODUCTS, PRODUCE, CATTLE AND MEATS,

AT QUARTERLY INTERVALS, SHOWING FLUCTUATIONS IN QUOTATIONS FROM JANUARY 1, 1891, TO OCTOBER 1, 1896, COVERING THE PERIOD OF RECENT EXTREME DEPRESSION.

MONEY STOCKS NOW AND IN 1873.

It is one of the stock arguments of the supporters of the Chicago platform that there has been a scarcity of gold since 1873, and that the money in circulation at the present time is insufficient to transact the business of the country, the assumption being that before 1873 the money in circulation was sufficient for the purposes of trade. Many times during recent years this journal has directed attention to statistics going to show the baselessness of these arguments, the groundlessness of which is rendered more emphatic with each addition to our knowledge of the facts bearing upon the subject. As regards the United States itself no two opinions can exist among intelligent men. It is well known that specie payments were suspended for more than a decade prior to 1873, and for the years intervening between that date and the date when the Resumption act went into effect, viz., January 1, 1879. During the greater part of that period gold and silver coins were not in circulation, except on the Pacific coast, where it is estimated that the specie in circulation amounted to about $25,000,000. On the first of the present month the gold coin in circulation amounted, according to the Treasury statistics, to $478,771,490. An increase so marked in the amount of gold in circulation, an increase of over 1,800 per cent., does not seem to bear out the idea of a scarcity of gold as far as the United States is concerned. The total stock of gold in the country, including that in the Treasury, amounts now to over $600,000,000.

As regards the rest of the world, statistics recently furnished by the Director of the Mint show that the stocks of gold in the leading countries of Europe have also increased in a very marked degree since 1873. For example, the stock of gold in the United Kingdom showed an increase from $144,900,000 in 1873 to $580,000,000 in 1895, in France there was an increase from $118,000,000 to $850,000,000, in Germany there was an increase from $167,400,000 to $625,000,000, in Russia from $149,100,000 to $480,000,000, in Italy from $17,700,000 to $98,200,000, in the Netherlands from $16,100,000 to $29,200,000, in Austria-Hungary from $34,000,000 to $140,000,000 and in the Scandinavian Union, comprising Denmark, Sweden and Norway, from $19,200,000 to $30,000,000. In the countries mentioned, taken together, the stock of gold increased from $666,400,000 to $2,832,400,000; or, in other words, the stock of gold in the countries mentioned was more than four times as large in 1895 as it was in 1873. In the meantime it may be mentioned, by the way, the stock of silver in the countries mentioned increased from $145,000,000 in 1873 to $1,094,800,000.

Both in the United States and in Europe the increase in the stock of money, as a whole, has greatly outstripped the increase in population. The amount of money in the United States, including money in the Treasury, increased from $774,445,610 in 1873 to $2,257,945,845 on October 1, while the amount of money in circulation increased from $754,881,809 in 1873 to $1,582,302,289 on October 1. The circulation per head of population, which amounted to $18.04 in 1873, had increased by October 1 to $22.05, while the total stock of money per head of population increased from $18.58 in 1873 to $32.86 on June 30 of the current year. A like increase is noted in the principal countries of Europe. The stock of money per head of population increased in the United Kingdom from $6.66 in 1873 to $20.78 in 1895. In France there was an increase from $15.43 in 1873 to $35.77 in 1895. In Germany there was an increase from $5.21 in 1873 to $17.59 in 1895. In Austria-Hungary there was an increase from $9.44 in 1873 to $10.67 in 1895. In Italy there was an increase from $4.78 to $10.79, while the Netherlands showed an increase from $17.31 in 1873 to $24.25 in 1895. It is worthy of notice that the stock of money per head of population in the United States is larger than that in such European countries as the United Kingdom, Germany, Russia, Italy or Austria-Hungary, France alone, among the more important European nations, having a larger per capita stock of money than the United States.

Summarizing the results above outlined, it may be said that the stock of money in the leading nations of the world at present is much larger than it was in 1873. In the United States the circulation has more than doubled, while the total stock of money is about three times as large as it was in the year of "the great crime". In the principal European countries there has been, likewise, a marked increase in the money stocks in the interval. In no direction has the increase been so marked as in the case of gold and silver. The stock of gold in the United States has increased enormously, as has that of silver. Abroad conditions have been similar. The increase in the gold and silver stocks of the principal civilized nations has been remarkable in the extreme. Taken altogether the statistics disprove entirely the argument that there is, as compared with the halcyon times of 1873, not only no decrease, but a marked increase in the amount of money as a whole, and particularly in the amount of gold used as money throughout the civilized world.

FOREIGN TRADE STATISTICS FOR RECENT YEARS.

Reference was made in general terms in our issue of last week to the statistical statement prepared by the Agricultural Department regarding the foreign trade of the United States for some years back, the general totals of imports and exports for the ten-year period ending in 1896 being given, together with some considerations suggested by a comparison of the yearly average for the decade, with the totals for some recent years. The statement contains some other features of interest, a reference to which was postponed owing to lack of space. One of these features concerns the proportion borne towards the whole body of exports by the products of agriculture, of manufactures, of mining, of the forest, and of the fisheries and of miscellaneous products respectively during the last six fiscal years. The values of these several classes of products and their percentage of the total product for the last fiscal year were as follows:

	1896	
Products of	*Value.*	*Per ct.*
Agriculture	$569,841,714	66.02
Manufactures	228,489,893	26.47
Mining	20,412,153	2.37
Forests	23,718,204	3.91
Fisheries	6,585,814	.76
Miscellaneous	4,152,709	.47
Total	$863,200,487	1.00

The total above given was exceeded by small amounts in the years 1894 and 1891, the excess being about $6,000,000 in the first mentioned year and a little over $9,000,000 in 1891. The total was, however, exceeded by over $152,500,000 in the year 1892. The value of the agricultural products in 1896 was exceeded in every year but 1895, the excess being heaviest in the year 1892, when it amounted to over $229,400,000. In the year 1892, also, the products of agriculture constituted the largest percentage of the total exports for any year of the six. The percentages were respectively 73.69 per cent. in 1891, 78.69 per cent. in 1892, 74.05 per cent. in 1893, 72.28 per cent. in 1894, 69.73 per cent. in 1895, and 66.02 per cent. in 1896. On the other hand, the products of manufactures exported in 1896 exceeded, both in value and percentage of the total, those exported for any previous year of the six under comparison. The exports of products of manufactures in 1896 were valued at $228,489,293, which represented an increase of over $44,800,000 as compared with 1895, of over $44,700,000 as compared with 1894, of over $70,400,000 as compared with 1893, of nearly $70,000,000 as compared with 1892, and of over $59,500,000 as compared with 1891. The percentages were 26.47 per cent. for 1896, 23.14 per cent. for 1895, 21.14 per cent. for 1894, 19.02 per cent. for 1893, 15.61 per cent. for 1892, and 19.37 per cent. for 1891. The values and percentages of the other classes of products have not varied very greatly during the period.

Of our various foreign customers the United Kingdom, as has been already pointed out in a prior notice of the statement, took 46 per cent. of the total exports in 1896, and other British possessions 12 per cent., making the takings of the British empire, as a whole, 58 per cent. The percentages taken by the other countries were as follows: Germany, 11.1 per cent.; Canada, 6.8 per cent.; France, 5.3 per cent.; the Netherlands, 4.4 per cent.; Belgium, 3.1 per cent.; Mexico, 2.2 per cent.; Italy, 2.2 per cent., and Brazil, 1.6 per cent. Of the total imports during the year 1896 the United Kingdom contributed 21.8 per cent. and the other British possessions 11.4 per cent., making the total imports from the British empire, as a whole, 33.2 per cent. Of the other countries Germany contributed 12.1 per cent.; Brazil, 9.1 per cent.; France, 8.5 per cent.; Canada, 5.2 per cent.; Cuba, 5.1 per cent.; Japan, 3.3 per cent.; Italy, 2.8 per cent., and China 2.8 per cent.

Of the total value of imports for the year 1896, $409,967,204 represented the value of dutiable goods, and $369,757,470 that of duty-free goods. The customs revenue collected amount to $160,534,351. This revenue was greater than that collected in 1894 or 1895, though less than that collected in the years 1891, 1892 or 1893. On the other hand, the percentage of duty-free goods in 1896—47.4 per cent.—was less than that for any other year of those compared, with the single exception of the year 1891.

FALLING SILVER PRICES.

A great deal of attention has been attracted by the rapid and continued decline in the commercial price of silver. The present week has seen a further drop in the market value of the white metal, which has sold as low as 29¾d. per ounce in London and 64⅜c. per ounce in New York. These are the lowest quotations of the present year, and it is necessary to go back to March, 1895, to find the London price below 30d. Not only does the current price of silver reduce the bullion value of the silver dollar to below 50c., but the decline of silver, occurring, as it does, in the face of the advance in wheat, is a contradiction of one of the chosen arguments of the advocates of free silver coinage. The fact that prices of wheat and silver had declined more or less together was doubtless a coincidence. Nevertheless, the facts had been used freely by the free silver supporters for some years past, and have been among their stock arguments in the beginning of the campaign here. The present rise in wheat and decline in silver deprive them, however, of any assistance of this kind in making out a case with the growers of wheat, and for this reason the state of the silver market is, as already indicated, the object of considerable general attention and comment.

The decline of silver is, in this case, a natural one. It requires no lengthy explanation, but can be traced directly to the condition of Eastern exchange and the trade relations of India, China and Japan with Europe and America. Not only is the export trade of India seriously affected by the wheat crop failure, but its power to absorb silver for use in the arts has been seriously curtailed by the same reason. Although the Indian mints have been closed to the coinage of the rupee, the universal and immemorial custom of the native population of India to keep a large part of their accumulated wealth in the form of personal ornaments made of silver, has not changed in the least, and India has consequently continued to absorb silver for such purposes, in spite of the closing of the mints. Any curtailment of the prosperity of the country would, of course, be reflected in a decided falling off of the demand for silver from that country. The situation there also affects exchange on Calcutta and Bombay, the comments of the London *Statist* of a fortnight ago upon Indian exchange having a bearing upon the subject now under consideration. The authority in question says: "Considering the small shipments of produce from India at the present time, and the large imports into that country, the strength of the Indian exchange indicates the continued desire of railway and other companies to remit money to India. As we elsewhere point out, the outlook in India is very unpleasant. Last season's failure of the wheat and seed crops is likely to be followed by a great deficiency in next year's supplies, at the same time that the other crops of the country are very poor. Were it not for the transfer of capital to India that is now going on a decided fall in exchange might for a time be witnessed as a consequence of the falling off in exports. The trade position in China and Japan is also discouraging. Trade in these countries has been seriously affected by the great reduction in the American demand for silk, but here again exchange is supported by the transference of money from Europe to Japan on account of the Japanese government."

It will be observed that the journal quoted from also takes into consideration the unfavorable export trade of China and Japan. To this it might be added that the Straits Settlements are, according to the latest advices, affected by a similar diminution of trade, and are consequently less able to take silver on a large scale, so that, leaving aside all other considerations, the natural factors connected with the Eastern demand for the metal constitute a perfectly reasonable basis for its decline.

There are, however, reports that the fall of silver has been accelerated by other circumstances. The reports may be exag-

gerated, but there would still seem to be some basis for the allegation that speculators here and in London who bought silver or silver securities last summer, after the Chicago convention, have liquidated. It will be remembered that at one time silver bullion certificates received a good deal of attention in our market and had a sharp rise, while the allegation is that the speculative interests identified with the movement had their allies in London who bought rupee paper, the theory being that the possible success of the free silver propaganda in the United States would cause a heavy advance in silver and silver securities. The condition of the free silver campaign, it is stated, has now caused the speculators to give up the field and liquidate as quietly as possible, the slump in silver values this week being notice that they have accomplished their purpose and have left the silver market to the operation of the natural factors, which, as set forth above, are for the time being of a decidedly adverse character.

READING'S REORGANIZATION ASSURED.

Notwithstanding the unfavorable financial and speculative conditions of the past three months, steady and satisfactory progress has been made with the work of reconstructing some of the most important railroad corporations that fell into the hands of the courts and of receivers during the panic of 1893 and the succeeding period of depression. The Northern Pacific's reorganization, for instance, is on the high road to completion, the property having been sold under foreclosure and passed into the possession of the reorganization committee, as representatives of the assenting security-holders. The formation of the new corporation may be delayed somewhat by the fact, as is alleged, that the intention is to apply to Congress for another national charter, instead of operating under a charter obtained from one of the states through which the road passes. At all events, only a few months will elapse ere the Northern Pacific will once more be restored to a position of solvency, and its new securities take the place to which they are entitled in the stock market.

The most important developments of this character relate, however, to the reorganization of the Philadelphia & Reading property. Progress in connection with that property has been extremely rapid of late. All doubts about the intentions of the reorganizers with regard to the foreclosure sale of the road and its auxiliary properties have been set at rest. The sale has actually taken place and the court has confirmed it, the reorganization committee, or their representatives, being the purchasers. It has apparently been determined to allow the old charter of the company, valuable as it is, to go by the board, and it is as yet uncertain whether or not another old special Pennsylvania charter has been secured under which the corporation could enjoy the same privileges and the same freedom in regard to holding property as before. It is, however, strongly believed that this will be the solution, nor does there seem to be any foundation for the reports that had been circulated regarding the possible separation of the coal and iron property from the railroad proper, and its use as the nucleus for a combined selling agency for all the anthracite coal roads. In this connection it may be mentioned that the condition of the coal trade is more satisfactory to the producers than it has been for years past. Contrary to the fears of a section of the public when the compact of last winter between the coal roads was made, there has been no excessive advance in coal prices. On the contrary, the principal effects of the newly-established harmony have been the reduction of surplus stock and the suppression of overproduction, so that the companies generally obtain full circular prices and are not exposed to the constant cutting of prices which attended the old condition of affairs, when all hands were striving to crowd the market with coal and do as much business as possible, irrespective of whether it paid or not. There has, it is true, been some complaint on the part of individual coal-mine owners in regard to the transportation rates charged by the railroads, nor has the season so far indicated a very large absorption of coal. The conservative attitude of the companies has, on a general survey, been a decided benefit to the anthracite companies, and to Reading in particular. In fact, it is generally considered that the Reading property has been benefited to a much greater degree than if the fight in which it engaged to secure a large allotment of the total anthracite production had been crowned with success.

These considerations, together with the rapid progress toward the carrying out of the reorganization, have naturally affected Reading securities in the stock market. The final installment of the assessment on the old securities was paid last week, and the quotations now represent the "street's" estimate of the new values to be created under the plan. That the estimate has been a favorable one is shown by the advance in the market price of both the stock and the junior bonds. It is needless to say that this is partly speculative in character. Wall street doubtless remembers the rapid advance of Reading stock under the last of its reorganizations, and perhaps jumps at the conclusion that this process will be repeated in the present instance. In this connection it may be well to consider the record of the company for the past three years and compare the earnings in those periods with the scale of fixed charges under the new plan. This may be tabulated as follows:

	1895.	1894.	1893.
Gross earnings	$21,300,575	$20,344,775	$22,828,847
Operating expenses	11,628,412	11,278,989	13,369,424
Net earnings	$9,672,163	$9,065,786	$9,459,423
Other income	587,090	505,632	609,072
Net income	$10,259,253	$9,571,418	$10,068,495
Coal & Iron Co. loss	699,809	Pf. 268,553	Pf. 1,104,195
Applicable to ch'ges	$9,559,444	$9,839,971	$11,172,690
Charges under reorg'n	9,317,173	9,317,173	9,317,173
Surplus	$242,271	$522,798	$1,855,517

Under the plan it would require $1,120,000 per annum to pay 4 per cent. on the new 1st preferred stock and $1,680,000 more to meet the 4 per cent. to which the new 2d preferred is entitled, while 3 per cent. on the new common would take $2,100,000 more. It will, therefore, be apparent that the future of the company depends upon the condition of the coal trade and the ability of the management to increase the earning power of the property, the reorganization in this connection looking like a substantial guarantee for peace and harmony in the anthracite trade.

EIGHTH REPORT OF THE INTERSTATE COMMERCE COMMISSION.

Owing to the enormous mass of figures embodied in the statistical report of the National Interstate Commerce Commission it necessarily appears at a date considerably after the expiration of the year which the report covers. Advance copies of that for the year ending June 30, 1895, have just been issued. Notwithstanding the lack of freshness in the showing, it is, nevertheless, of great value, and furnishes information unattainable in any other form and with a completeness of detail that leaves little to be desired. In fact, this wealth of detail may tend to make the report of less practical value to the general public and to owners of railroad securities in particular, who, for all practical purposes, depend mainly upon the information afforded by publications like the well-known "Poor's Manual," which are maintained by private enterprise. The statistics collected by the Interstate Commission cover, however, a number of points which cannot be treated in any private publication, and based, as they are, upon accurate, sworn statements, covering identical periods of time, they give a really accurate view of the condition and progress of our country's transportation systems.

The report under consideration covers, as already stated, the statistics of the year ending June 30, 1895, and is the eighth annual report of the commission. In a summarized form the principal figures for the year compare as follows with those of the year ending June 30, 1894:

ALL RAILROADS IN THE UNITED STATES.

Year ending June 30.	1895.	1894.	*Changes.*	
Miles operated	177,746	175,690	Inc	2,056
Gross earnings	$1,075,371,462	$1,073,361,797	Inc.	$2,009,665
Op. expenses	725,720,415	731,414,322	Dec.	5,693,907
Net earn'gs	$349,651,047	$341,947,475	Inc.	$7,703,572
Inc. from other sources	132,432,133	142,816,805	Dec.	10,384,672
Total inc	$482,083,180	$482,764,280	Dec.	$2,681,100
Fixed charges	425,966,921	429,008,310	Dec.	3,041,389
Balance	$56,116,259	$53,755,970	Inc.	$360,289
Dividends	85,961,500	101,607,264	Dec.	15,645,764
Deficit	$29,845,241	$45,851,294	Dec.	$16,006,053

It is also interesting to compare the statistics of operation and revenue per mile, which may be exhibited in the following tabular form:

Year ending June 30.	1895.	1894.	*Changes.*	
Gross earnings	$6,050	$6,109	Dec.	$59
Operating expenses	4,083	4,163	Dec.	80
Net earnings	$1,967	$1,946	Inc.	$21
Income from other sources	745	813	Dec.	68
Total net income	$2,712	$2,759	Dec.	$47
Fixed charges	2,356	2,442	Dec.	46
Balance	$316	$317	Dec.	$1
Dividends	484	578	Dec.	94
Deficit	$168	$261	Dec.	$93

During the year covered by the report 14 roads were abandoned, 9 corporations were merged in other roads, 32 were reorganized, and no less than 28 consolidated, the total number of roads in the country at the date at which the report closes being 1,965, against 1,924 in 1894, an increase of 41. It is also interesting to note that 42 roads, with a mileage of over 1,000 miles each, own altogether 100,714 miles, or 55 per cent. of the total in the country, and that .10 per cent., or 18,896 miles, are comprised in the systems of between 600 and 1,000 miles—24 in number.

The equipment of all the roads in the United States on January 30, 1895, was composed of 35,609 locomotives, an increase of 207 locomotives for the year, and 1,220,561 cars, a decrease of 7,517 cars. Of this total 33,112 are passenger cars, a gain of 94 passenger cars. The law requiring all railway equipment to be equipped with train brakes and automatic couplers by January 1, 1898, is also being observed, the figures showing that of the total locomotives and cars in service (1,306,260) 302,498 are fitted with train brakes and 408,856 with automatic couplers. Thus this reform has its influence in connection with the record of railroad accidents. According to the commission's figures during the year ending June 30, 1895, the total killed was 6,136, against 6,447 in 1894, and the injured from all causes numbered 33,748, against 31,589 in the preceding year. Reduced to a comparative basis, one out of 433 employees was killed and one out of 31 employees injured, while of each 2,984,532 passengers one was killed, and one injured for every 213,651 passengers carried. The report adds: "From the above comparative statement it is clear that the year ending June 30, 1895, is more satisfactory, so far as accidents are concerned, than any previous year. Reference was made in last year's report to the fact that the marked reduction in the pay-roll of the railways, by which the incompetent and inefficient were dropped from the railway service, and the consignment to the scrap heap of equipment worn out or out of date, were largely responsible for the greater safety in railway travel and railway employment shown by the statistics of the year. The result of raising the character of railway service and grade of railway equipment is yet more marked during the present year, and to this must be added the fact that the demands upon the passenger service during the present year have been somewhat decreased. It is also worthy of suggestion, although the facts yet at command are not adequate for confident assertion, that the fitting of equipment with automatic devices is beginning to show its beneficial results. The class of employees most liable to those accidents which automatic couplers and train brakes are designed to avoid is trainmen, and from the previous statement it appears that but one trainman for each 155 in the railway service was killed in 1895, as compared with one trainman killed for each 105 employed in 1890. But it is easy to lay too great stress upon this consideration."

MR. BAYARD ON THE POLICY OF REPUDIATION.

No man who has held legislative office in the United States has had a more consistent and honorable record upon financial questions than the present minister of the United States to the Court of St. James, and scarcely anyone doubted upon which side of the financial issue now joined he would be. A public statement of his position was hardly needed for the maintenance of his own consistency, yet it is not unwelcome, and it will be read with interest within the United States, in spite of the fact that Mr. Bayard is temporarily stationed abroad in a position which, to a certain extent, divorces him from party politics in the United States.

Mr. Bayard points out that the evils which surround and the perils that confront the country have not grown in a night, nor have they come without warning, but that the dangers of disregarding sound financial principles have been distinctly foretold and reiterated. He says, not without some degree of pardonable pride, that looking over the last twenty-five years, as a representative of Delaware in the United States Senate, and as a citizen discussing elsewhere public measures and policies, he cannot discern any failure on his part to speak with absolute plainness in opposition to the acts of legislation and financial and commercial policies which are responsible for the present perilous and distressing conditions. In such a crisis, he says, language of reproach, of crimination and recrimina-

tion would be useless, or worse, and unworthy, but each man, upon his own responsibility, must ask and answer the question whether men, collectively or individually, can, with justice or self-respect, abandon a just and vital principle in the hour of its exigency, and just when the necessity for its maintenance is greatest, and fly from the field when the assault is fiercest and courage is most needed to defend the right. Whether the principle is imbedded in the text of the written charter of our government or is found in statutes intended to give effect to the Constitution, the measure of duty and fidelity is, he says, equal; and in these seasons of excitement, alarm and passionate unreason, which are almost inevitable in the history of any nation, a patriotic, sincere and self-respecting man will hear and heed the summons, and will feel the real trial of his soul to support, in the hour of their distress, the truths he has deliberately weighed and avowed it to be his duty to sustain for the welfare of the country to which his faith and allegiance have been plighted.

When, therefore, Mr. Bayard says, a citizen, professing himself a Democrat, is called upon by many, or by few, to yield his convictions and assent to the doctrine that Congress has the power or can rightfully exercise it by its legislative fiat, to create values, and, regardless of their intrinsic or commercial value, to invest one or other of the earth metals with an arbitrary power as money, and override and alter at legislative will or caprice the ratio of the exchange ability of such metals, regardless of the impairment of the obligation of contracts—his answer should be that such a claim of power is not consistent with a government of limited powers as defined by our Constitution, but contains the quintessence of tyranny, dishonesty and absolutism, and is destructive of that morality which is essential to the peace and stability of civilized society, but is, in plain words, a proposition to destroy the institution of property and break down every legal defense for its protection. This one question and its answer sufficiently justify, he adds, the prompt and absolute refusal of a constitutional Democrat to support, in any degree, the nominees of the Chicago convention and the preposterous claims of legislative power contained in their platform, under which the credit of the nation and the peace and order of society would inevitably perish. In truth, no person acquainted with the long and honorable career of Mr. Bayard could have expected any other decision than this from him, for any other conclusion would mean a reversal of the principles which have guided his public life. His formal reiteration of those principles simply adds another to the formidable list of Democrats of light and leading who have repudiated with emphasis the doctrines of the Chicago convention.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

[East of Rocky Mountains.]

Bushels week ending	1896.	1895.	1894.	1893.
January 4	+645,000	—578,000	—379,000	+1,013,520
January 11	+671,000	—1,422,000	+1,045,000	+385,000
January 18	—177,000	—1,708,000	—522,000	+1,750,000
January 26	—472,000	—1,147,000	—90,000	—684,000

Postal receipts for the first quarter of the current fiscal year show a falling off of about $1,500,000 as compared with the preceding quarter and of $63,000 as compared with the quarter ending with September 30 last year. The Washington *Star* points out that while the loss is not large for the last quarter as compared with the corresponding quarter of 1895, it has taken place in the face of the fact that postal revenue increases more rapidly than population in prosperous years, and that there should have been an increase of nearly $1,000,000 under normal conditions. Third Assistant Postmaster General Hazen declared in his annual report for 1885 that "in no other statistics of either government or private business are the pulsations of trade so readily and so unerringly distinguishable as in the postal revenues. The entire country is tributary to them, and every department of life, whether of a business or social nature, feels the need of the service which they represent." He presented figures to show that the issues of postage stamps and other postal revenue had fluctuated up and down with the state of business, and that this was peculiarly true of the thirty largest post offices, which respresented most directly the pulsations of general trade. The issues of stamped paper advanced at an astonishing rate during the prosperous years from 1885 to 1893. This increase in eight years was at the rate of nearly $4,500,000 annually, and represented a total percentage in 1893 nearly double that of 1885. The exact gain was equivalent to about 87 per cent., or nearly 11 per cent. a year upon the total of 1885.

The year 1894 told a different story. The crisis pulled down the sales of stamped paper to $70,239,910, and the improvement the next year was only about 5 per cent. instead of 10 per cent. The receipts from the sale of stamped paper in 1895 were $73,889,598, and for 1896, $79,168,272. The figures for 1895, therefore, fell below those of 1893, and the figures for 1896 showed an improvement of less than 5 per cent. on those of three years earlier. The fiscal year ending June 30, 1896, was the year of the operations of the bond syndicate, and the improvement during the first two quarters was about $4,000,000. This rate of improvement was not maintained during the following quarters, while the silver agitation was gathering headway, and fell to $60,000 for the quarter ending on June 30. The quarter ending with September has witnessed a further decline, and the total receipts from stamped paper are less than a year ago. The decrease for the quarter just closed would probably have been still greater but for the campaign activities, which have resulted in the mailing of newspapers and other matter not subject to frank. This may be judged from the fact that the payments for newspaper and periodical postage increased $60,000 from June to September, in spite of the loss of more than $1,500,000 in the total issues of stamped paper, whereas the receipts for newspapers and periodical postage in the quarter ending September 30, 1895, were only $459,481, or less than 60 per cent. of those of the last quarter, although the total receipts were nearly the same.

According to the annual report of the Third Assistant Postmaster-General for the year ending June 30, 1896, the total amount of postal expenditure for the year was $90,626,296.84. The total receipts were $82,499,208.40. There was thus a deficiency of $8,127,088.44. The increase of receipts was over 7 per cent., the increase of expenditures a little less than 4½ per cent. The service is shown to have been economically administered. The result in figures is a reduction of the annual deficiency of $1,679,956.19. This expenditure does not include the cost of carrying the mails over the subsidized Pacific railroads, which amounts to $1,558,896.69. This item is never paid out of any appropriation made for the postal service, but under the law is certified to the Secretary of the Treasury as a credit in favor of the companies in their account with the government.

One of the gratifying features of the year was the increase of special delivery business during the year. The number of letters specially delivered was 4,184,327, an increase of 13 per cent. over the previous year's business. The average time required for delivery was seventeen minutes. The net profit of the system was about $100,000. The number of postage stamps, stamped envelopes and postal cards issued was 4,195,665,523, an increase of 7 per cent. over the issues of the previous year. The value of these issues was $79,178,101.89. The increase of second-class matter mailed by publishers and news agents was nearly 12 per cent. The total weight of matter thus mailed, paid and free, was about 349,000,000 pounds. The business of registration was also increased, the rate being about 4 per cent. The total number of pieces registered was 15,106,336. The percentage of losses was reduced, the ratio being about one in every 24,000 pieces mailed. Recommendation is again made for a limited indemnity to the owners of registered matter lost in the mails. The contracts made through the Third Assistant's office for official envelopes for the use of the several executive departments and of postmasters, involving the purchase of about 130,000,000 envelopes, do not show any material reduction of prices.

In his annual address before the National Live Stock Exchange at Fort Worth, Tex., the president, after discussing the effects of prohibitory legislation against American meat products abroad, suggested to those interested in the sheep industry that, in order to successfully compete in foreign markets with the sheep-raisers of other countries, less attention be paid to wool raising and more to food qualities. It was not, he said, particularly a question of fat and weight, but of weight and flesh, which latter, he believed, could in a great measure be produced by breeding. We have a good example set us, he said, that of the English sheep raiser, who, through proper breeding and care in feeding, produces mutton superior to ours in selling and edible qualities. An investigation and careful study of this question by those immediately interested would, he believed, yield results that will be surprising and very satisfactory to the successful breeder, and of great benefit to the industry. In a measure, these suggestions, he said, applied with equal force to the cattle and beef industry. A more thorough study to improve the beef-producing animal in such a manner as to yield a less amount of fat and greater amount of meat would, he thought, result in the producer obtaining an increase in the present marketable value of his animal sufficient to amply repay him for the outlay of time and money necessary to bring about such results. It is these minor details, he said, in the aggregate so essential, that the producer must look to to successfully compete with his foreign competitor.

CURRENT BUSINESS NEWS.

Industrial.

A Reading, Pa., dispatch states that the nail works, puddle and rolling mill of the Brooke Iron Company, at Birdsboro, which have been idle since last September, started up Monday, giving employment to 250 people.

On and after October 15 and until further notice the factory of the American Waltham Watch Company will run fifty-four hours a week. The factory has been running on half time all summer. It employs 2,000 people.

The American Plate Glass Company, which is located at Anderson, Ind., has resumed operations. The American Wire Nail Company, of the same place, has put on its full force.

According to the Chattanooga *Tradesman*, some large contracts are reported in steel and iron bars, and also in nails. Pig iron continues in good demand, and an advance of 25c. per ton has been made on some grades.

Pig iron, which three weeks ago was slow of sale at $7 a ton for No. 1, is now active at $7.90 to $8 a ton. Free sales for the last two or three weeks have materially decreased stocks.

At Columbus, Ohio, this week, the State Convention of Miners ended after a three days' session without reaching a solution of the wage question.

The various collieries operated by the Susquehanna Coal Company at Wilkesbarre, Pa., have resumed work on full time and will continue so during the remainder of the year, giving employment to about 8,000 miners.

The mills of the Carnegie Steel Company at Homestead and Duquesne, Pa., have resumed work, giving employment to several thousand men.

Over 2,000 Hocking Valley miners are on strike on account of a reduction of wages from 6½ to 4cc. per ton. At several of the mines the men have voted to accept the proposed reduction.

A reduction of 10 per cent. in the wages of the 2,000 operatives in S. Sanford & Sons' carpet mills, at Jamestown, N. Y., has been ordered.

About 150 employees of the Grist Manufacturing Company of Westville, Ct., have struck in consequence of a 20 per cent. cut in wages.

The Horseshoers' Protective Association, which has been holding its fifth annual convention at New York, "declares that, in spite of the bicycles, there are more horses in the country now than ever before. The great majority of bicyclers, he explains, would not own horses anyway. In Ohio there are 19,000 more horses than a year ago. New York has 12,500 and Michigan 17,000 more. There are 16,000 members of the Horseshoers' Association, and they are also organized in seven different states."

The Metacomet Mill, at Fall River, "has shut down indefinitely, and the Fall River Manufactory is to suspend operations at the end of this week."

At the recent meeting of the British Iron and Steel Institute, at Bilbao, Spain, a paper was contributed by Mr. H. D. Hibbard, of New Jersey, on "Sand on Pig Iron."

The *American Agriculturist* says Nebraska produced 15,000,000 pounds beet sugar in 1896, against 8,378,900 pounds in 1895 and 2,734,500 pounds in 1891, and that one farm of forty acres shows profit of $42 per acre.

Commercial.

A Chicago dispatch to the New York News Bureau says: "Shoes that cost $3 last week will cost $3.50 this week. It is believed that the United States Leather Company and the dressed-beef men have come to a satisfactory understanding."

Shoe manufacturers, jobbers and sole cutters show continued interest in the various grades and descriptions of leather, and prices are firm to strong all around.

The independent coal operators held a meeting at New York this week to discuss the condition of the trade and listen to papers of interest. The importance of independent operators has been lessened since Coxe Bros. & Co. joined the anthracite coal combination. The president of a coal road says "that there is little likelihood of an advance in the price of coal for at least two months. The condition of the market did not warrant it, as the demand is not equal to the supply."

The International Association of Fire Underwriters convened at Niagara Falls this week.

The United States consul-general at St. Petersburg reports that the world's wheat harvest, compared with 1895, decreased 185,485,542 bushels. He says the harvest in the United States, Canada, Argentina, Uruguay, Chili, Australia and the East Indies shows a decrease of 165,892,959 bushels, and Russia alone shows a drop of 56,575,467 bushels, while the cereal exports of that country for eight months were only 192,440,651 bushels, against 241,254,578 last year.

The annual convention of the Commercial Travelers' Home Association of America met at Binghamton, N. Y., this week.

The twenty-fifth annual convention of the National Board of Steam Navigation opened in St. Louis this week.

The American consul as Zurich writes the Department of State that American pig iron, steel and tools are wanted in Switzerland. One of the largest houses in Zurich requests him to let American dealers know that they want 40,000 tons of pig iron for foundry purposes; 55,000 tons of blooms, billets, wire rods, bars and sheets; 3,200 tons of pipes and tubes, and 2,000 tons of hardware goods, chains, bolts, nuts, screws, etc.

News from the Pacific whaling fleet in the Arctic has been received at San Francisco "by the steam tender Jennie, which arrived in a dilapidated condition with 59,600 pounds of bone for the Pacific Whaling Company. It is a story of deaths, desertions, fighting scraps, a duel, mutiny and, to crown all, a poor catch. The entire fleet took only forty-three whales."

A new source of revenue to farmers is the European demand for apples. Last year 35,000 barrels were exported, while the exports this year already amount to more than 600,000 barrels. The fruit brings good prices, but only the best of it can be sold in competition with the foreign product.

The Baltimore *Journal of Commerce* says: "The south sells 70 per cent. of her cotton in foreign markets, where the gold standard regulates prices, and what has she to gain, then, by the adoption of a policy that would simply enable her to sell the other 30 per cent. under a silver standard."

The Chicago *Times-Herald* estimates the increase in wealth of the country by the advance in the price of corn, wheat and oats in the last 90 days at $175,000,000.

The London *Economist's* index number of the price of commodities October 1, 1896, is 1,958, against 1,928 September 1 and 2,009 a year ago.

A topic of discussion at the grain exchanges this week has been the demand from India and Australia for cargoes at San Francisco.

Financial.

Edison Electric Illuminating Company of Boston has declared a dividend of 1¾ per cent., payable November 2, to stockholders of record October 13.

The Long Island Railroad Company has declared a quarterly dividend of 1 per cent., payable November 2.

A regular quarterly dividend, amounting to 1¾ per cent., has been declared on the preferred stock of the Great Northern Railway Company, payable November 2.

The St. Paul, Minnesota & Manitoba Railroad Company has declared a quarterly dividend of 1½ per cent., payable November 2.

The following statement shows the gross earnings, operating expenses and net earnings of the Edison Electric Illuminating Company of New York for the periods set forth:

	1896.	1895.	1894.
Gross	$163,993	$148,305	$125,606
Operating expenses	92,401	85,218	69,042
Net	$71,592	$63,087	$56,564
Net nine months	747,775	667,365	555,322

The following securities were sold at auction this week in New York:

30	Shares Am. Exchange Nat'l Bank (hypothecated) 166¾
25	Shares Citizens' National Bank of Englewood ... 171
6	Shares American Surety Company ... 190
60	Shares Cincinnati, Hamilton & Dayton R.R., com. 25½
47	Shares Consolidated Ice Company, preferred 65½
18	Shares Consolidated Ice Company, preferred .. 65½
21	Shares Third Avenue Railroad Company 162
715	Shares Tallapoosa Water Co. (hypothecated) .... $5 lot
$6,000	Tallapoosa Water Company first mortgage 6 per cent. gold bonds (hypothecated) ... $5 lot

The Board of Governors of the New York Stock Exchange have listed the following securities: Belleville & Southern Illinois Railroad, $998,000 first mortgage 8s, extended at 4½ per cent., guaranteed by Illinois Central; Brooklyn Wharf & Warehouse Company, $1,500,000 additional first mortgage 5s (for Robinson Stores), making total listed $17,500,000; Mobile & Birmingham Railroad, $1,200,000 mortgage 4 per cent. gold bonds, Nos. 1 to 700, inclusive, of $1,000 each, and Nos. 701 to 3,200, inclusive, for $200 each, as "mortgage income bonds" until July 1, 1899, when they become a fixed charge of the company.

Railroads.

At the annual meeting of the Erie Railroad Company, Tuesday, the old board was reëlected. R. M. Galloway was elected to fill vacancy in the board.

Chicago eastbound shipments last week were 51,520 tons, against 63,993 last week. Michigan Central carried 10.6 per cent.; Wabash, 7.5 per cent.; Lake Shore, 11 per cent.; Fort Wayne, 9.2 per cent.; Pan Handle, 10.6 per cent.; Baltimore & Ohio, 9.2 per cent.; Chicago & Grand Trunk, 9.6 per cent.; New York Central & St. Louis, 14.4 per cent.; Chicago & Erie, 13.8 per cent.; Big Four, 4.1 per cent.

The *Southern Lumberman* says that recent changes in various departments of the Star Union Line and Pennsylvania Railroad system include the transfer of the former general agent at Nashville to the Memphis force. He is succeeded by Mr. D. A. Lindsey, who will have charge of Nashville and the southern territory. Mr. Lindsey's appointment is highly regarded by patrons of the Pennsylvania lines.

At the annual meeting of the directors of the Indiana, Decatur & Western Railroad, held at Indianapolis, Ind., on Thursday, M. D. Woodford, president of the Cincinnati, Hamilton & Dayton; H. F. Shoemaker and A. Taylor were reëlected, as was the old board. No action pointing to the consolidation of the line with the Cincinnati, Hamilton & Dayton was taken.

The managers recommend that on all exhibits of horses and cattle forwarded from the western termini of the trunk lines to the Second Annual Stock and Farm Show, to be held in New York city from November 23 to 28, inclusive, "full tariff rates shall be charged, but that such exhibits if unsold may be returned free."

Missouri courts have decided that railroads in that state must carry bicycles, when accompanied by their owners, free of charge.

Gross and net earnings for August are as follows:

Miscellaneous.

Business in Connecticut was practically suspended on Thursday, it being Lincoln Day, a legal holiday.

The New York *Daily Recorder*, which was started in 1891, has suspended publication. Its subscription list is reported to have been purchased by the *Tribune*.

Foreign.

The *Deutsche Zuckerindustrie*, a paper devoted to sugar interests, estimates the world's crop at 7,069,756 tons, against 8,208,361 tons for the previous season. "In this estimate the beet sugar-producing countries, excluding the United States, participated to the amount of 4,236,100 tons, as against 4,688,500 in 1894-95. The visible world's supply, excluding new crop, but including cargoes afloat, is estimated to be 1,331,306 tons, as against 1,500,413 tons last year at this time."

Messrs. Joseph Rodgers & Sons, Limited, England, cutlers, "have just returned to their workpeople the 5 per cent. reduction they obtained from the pen and pocket-knife workers when trade was depressed. The question is open for reconsideration at the end of six months."

The last Thursday in November will be Thanksgiving Day throughout the Dominion of Canada this year.

Mr. Asano, president of the Tokio Oriental Steamship Company, was in England recently to place "orders for the construction of several new steamships to be employed in the trade between Batoum and the East."

Recent floods in Siberia have rendered thousands homeless and destitute. Grain crops were destroyed and many cattle were drowned. There was also a heavy loss of life.

Prices of food grains are abnormally high in the Punjab (India) and "widespread scarcity is beginning to prevail both in this province and in certain districts of the northwest provinces. The government will establish relief works should the necessity for them arise. Should there be another dry, cold winter, the distress would be very great."

Bell Island, in Conception bay, at the southeast corner of Newfoundland, has an area of 12 square miles, but its deposits of iron ore "appear to be enormous," or, to use the words of Sir H. Murray, the governor of Newfoundland, they are "practically inexhaustible." A part of the mining rights has been leased to a Canadian company, which has built a tramway across the island and erected a loading pier, but the minerals in the western portion of the island are still unlet, and are said to be in the hands of about four individuals.

The Japanese ask for exhibits of manufactured merchandise for the Commercial Museum at Osaka, which is to be a government institution in the nature of a permanent industrial exposition.

The Berlin *Vossische Zeitung* "learns that a series of conferences have recently taken place among persons connected with the Corn Exchange as to the best means of maintaining on a legal footing the dealings in wheat for future delivery under the new law. These conferences, the journal states, have led to a satisfactory result, inasmuch as a contract note has been agreed upon which, while excluding all speculative dealings, will permit of the continuance of genuine transactions for future delivery without any infringement of the law."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Corporation—Contract—Evidence.

The Supreme Court of Nebraska held, in the recent case of The Nebraska National Bank vs. Ferguson, that where a party contracts with, sues and obtains judgment against an imperfectly organized corporation, he is estopped from denying its corporate existence, and is precluded from recovering from its members individually, as if they were partners, upon the same indebtedness.

Railroad—Shipment—Stock—Injury.

The Supreme Court of Nebraska held, in the recent case of The Missouri Pacific Railroad Company vs. Tietken, that a shipper of live stock who receives from the railroad company undertaking the transportation of such stock a free pass to enable him to care for his stock in transit, assumes such risks and inconveniences as necessarily attend upon caring for such stock, and (modified accordingly) the liability of the railroad company to such shipper for personal injuries by him sustained, by reason of the negligence of its employees, is that of a common carrier for hire.

Married Woman—Suing Husband.

The Supreme Court of Minnesota held, in the recent case of Gillespie, that the effect of section 5530 of the Minnesota General Statutes of 1894 is to preserve the separate legal existence of a married woman in respect to all her rights of person and property, and, to the extent necessary to the full exercise and protection of these rights, to give her in her own name all the remedies in the courts which she would have if unmarried, and that hence she may sue her husband in her own name in any form of action to enforce any right affecting her property the same as if he were a stranger.

Married Woman—Note—Conveyance.

The Supreme Court of Georgia held, in the recent case of Latham vs. Latham, that where a husband invested his wife's money in land, taking a deed to the same in his own name, she had a perfect equity in the land, and was not estopped from setting up the same against one who, with full knowledge of the facts, took from the husband a conveyance of the property, although the conveyance was made for the purpose of indemnifying the grantee therein against loss by reason of his having become a surety for the husband and wife upon their joint promissory notes to another person, it not appearing that such conveyance was executed for the purpose stated with the wife's consent.

Note—Signature—Mark—Evidence.

The Supreme Court of Georgia held, in the recent case of Little vs. Rogers, that promissory notes found among the papers of an illiterate deceased person, purporting to have been signed by him with his mark and which he had paid, are, on the trial of an action against his administrator upon another promissory note also purporting to have been signed by the intestate with his mark, admissible in evidence for the purpose of comparing the marks on these notes with that affixed to the note in suit, the defense to the action being that this latter note was a forgery. The court said that the genuineness of the marks upon the notes offered for this purpose might be inferred from the facts above recited; that it was not absolutely essential to show by direct proof that they were actually made by the deceased, and that, in other words, the execution of the notes by making marks to the same could be proved by circumstantial as well as by direct evidence.

Railroad—Accident—Indemnity.

The Supreme Court of Indiana held, in the recent case of The Louisville, etc., Railway Company vs. Keefer, that where a person, in consideration of his employment as a railroad express messenger, signs a written agreement to assume all risks of accidents and injuries, whether occasioned by the gross or other negligence of the railroad corporation over which he runs or of its employees, to indemnify the express company from claims against it by such railroad corporation arising out of any recovery against the company for injuries to such messenger, and to execute, immediately after he may be injured, and deliver to the railroad corporation upon whose road he may be injured a release of all claims on account of such injuries, further ratifying an agreement then in force, or thereafter to be made between the express company and the railroad corporation by which the express company agrees that the railroad corporation shall not be liable for injuries to its property or employees, he cannot maintain an action against such railroad company for personal injuries caused by the fall of its bridge while the car in which he was riding was passing over it, if there was in force at the time an agreement between the railroad and express companies, such as was mentioned in his contract. The court held that railroads are not required by law to carry the business or employees of express companies, and the rights of such employees are not those of passengers, but only such as they acquire by contract, and that when a railroad undertakes to perform duties outside of those devolving upon it as a common carrier, it may contract against liability for negligence.

Mechanics' Lien—Priority—Value.

The Supreme Court of Appeals of Virginia held, in the recent case of The Fidelity Loan and Trust Company vs. Dennis et al., reported in the Chicago *Legal News*, that where a mechanic's lien is recorded on property upon which there is a deed of trust, recorded before work began on the building or structure placed thereon, the deed of trust creditor is entitled to priority of satisfaction to the extent of the estimated value of the property without the improvements for which the lien is claimed, and that the value is to be estimated as of the date of sale and may be fixed, either directly by the court upon the testimony of witnesses, or by reference to a commissioner, subject to exceptions to his report. The court said: "It is very clear that the prior incumbrancer is to have the benefit of his lien upon the land to the extent of the value thereof, exclusive of the buildings or structures placed thereon since the lien was created, and that its value is not to be ascertained as of some other time, when the land may have been worth more or less in market, but is to be ascertained at the time the liens are enforced by the court. It is to be ascertained at the time of sale. Nor can there be any doubt as to the manner whereby it is to be ascertained. It is to be ascertained by estimation. It is to be fixed by the court either from evidence submitted directly to it, or through the finding of a commissioner subject to review by the court, as in other chancery causes. But the value is to be estimated and fixed by the court before the property is sold, and the prior incumbrancer, as to the sum so fixed, is to be preferred in the distribution of the proceeds of sale. This amount, however, is all that he can obtain from the proceeds of sale until the mechanics having liens thereon are satisfied; and they are entitled to the residue of the proceeds of sale for the payment of their liens if not more than sufficient for that purpose, or, if more than sufficient, to so much as may be requisite to satisfy them."

Note—Consideration—Indorsement.

The Kentucky Court of Appeals held, in the recent case of McCarty et al. vs. Louisville Banking Company et al., that neither a partial nor a total failure of consideration, nor fraud between antecedent parties to a negotiable note put upon the footing of a bill of exchange, is a defense to the title of a bona fide holder thereof who acquired it before maturity for a valuable consideration, and without notice of any previous infirmity; that the possession of such a note by an incorporated bank in Kentucky imports that it was acquired by the bank in good faith, before its maturity, and in the regular course of business, and therefore that it was indorsed to and discounted by the bank; that in an action on the note by the bank this presumption cannot be overcome, so as to shift the burden on the plaintiff, by mere allegation of anything short of facts, which, if true, would render the note absolutely void from the beginning, and that in all cases except where such facts are alleged allegation and proof must be made by defendant of facts that would remove the presumption, such as of fraud in its inception, or circumstances raising a strong suspicion of fraud, before the plaintiff can be required to show by testimony when and how he acquired the right to, and possession of, the note. The court further held, that where the instrument has been acquired and is held in good faith the right to it is not affected by bad faith on the part of the indorser, or even by gross negligence of the holder, unless it amounted to bad faith on his part; that the statement in negotiable notes that they were executed for the purchase money of certain lots on which a lien was retained was not sufficient to put the bank which discounted them on inquiry, or to charge it with notice of a condition in the deed that the notes were to be returned if certain improvements were not erected by the vendor, and that the notes not being void, one who acquired them from the payee in good faith for a valuable consideration was under no obligation to hold them for the benefit of the makers in order that their right of defense might be preserved, and therefore the fact that he negotiated them to the bank gave the makers no claim of action against him, and their cross-petition against him was therefore properly dismissed.

BUSINESS NOTES.

Price of Iron.

The *Engineering and Mining Journal* says: "The somewhat unusual condition is presented just now of pig iron prices on a comparatively higher level in Great Britain than in this country. The prospect, moreover, is that this state of affairs may last for some time to come, since all departments of the iron trade there are active and the demand for raw material is rather on the increase. With Scotch pig warrants selling at over $11 per ton, and Middlesboro iron at $9.25 or $9.50 at furnace, there ought to be an opportunity for extending the exports of Alabama iron, which have already been begun. The only obstacle to this seems to be the increase in ocean freight rates recently, but that may be only a temporary condition."

Politics and Wood Pulp.

The *Northeastern Lumberman* says: "The activity in political circles has favored the wood pulp grinders and the newspaper mills. The Republican National Committee has sent out 225,000,000 pages of campaign literature. Probably the two wings of the Democratic party have also distributed millions of pages. Pamphlets by the carload have been forwarded by both parties from Washington, New York and Chicago to every state in the Union. The daily and the weekly newspapers are printing more pages each issue than in usual years. Handbills, ballots, posters and books have consumed thousands of tons of wood pulp paper. All this has made heavy drafts on the banks of spruce logs in the rivers and on the railroads of New England."

Transvaal Investments.

A correspondent of the London *Times*, referring to the lavish expenditure of the Transvaal government, the means for which is nearly all provided by the gold industry, "pointedly inquires where the interest for £150,000,000 of European capital sunk in the republic is to come from if the government cuts so deeply into the profits of mining. On 'war' the Transvaal proposes to spend £943,510, of which £375,000 is to go for firearms—enough to make every man, woman and child of Boer extraction a walking armory. Salaries eat up £898,041—an item which represents a good many fat livings for Hollanders. What would these flies on the wheel do were the exactions of the government to make profitable mining impossible? Surely, in their own interests, the salaried gang in Pretoria should rather fatten than starve the layer of the golden eggs."

Transvaal Gold Mine Interests.

The *Engineering and Mining Journal* says: "One of the misfortunes of the gold-mining industry in the Transvaal has been the subordination of its real interests to the purposes of the speculators who control so many of the mines, and whose great gains have come rather from the manipulation of the stocks in Europe than from the exploitation of the mines themselves, profitable as that has been in many cases. Last year the bull movement was in full progress, and predictions of the most brilliant future for the Witwatersrand especially and for all the Transvaal mines were heard on all sides and printed everywhere. Just at present the tendency is all the other way, and gloomy predictions are in order. Both from London and Johannesburg we hear talk only of ores decreasing in grade, of high expenses, and of the bad condition of some of the newer companies."

Climate of Alaska.

The popular idea of Alaska is that it is icebound during nine months in the year, and that only the miner and the fisherman are attracted to it. One of the returned California prospectors who had poor luck, describes the Cook Inlet country as a grass region as good for cattle and sheep as Montana. He says (in *Harper's*) "that he saw thousands of acres of meadow covered with red-top grass as high as his head, and these river meadows are so level that a mowing machine could be run all over them. The climate he found no severer than that of Idaho or Montana, where cattle run on the range all winter. At Kudink Island he found horses and cattle which had fattened on the rich grasses. What he saw led Mr. Bowers to predict that a few years would see southern Alaska one of the great live-stock districts in this country, thus aiding to make true that glowing picture of the manifest destiny of the great northern territory which Seward painted over thirty years ago."

Specialization in Professional Pursuits.

The following is from *Cassier's Magazine:* "Specialization in professional pursuits, in engineering particularly, has become the natural and proper result of the growth of applied science. The civil engineer of past generations who was supposed to command a comprehensive knowledge of every branch of engineering then practiced, from the design of a steam engine or machine tool to that of a bridge, or city drainage system, or complete water works plant, has virtually ceased to exist, and in his stead we find the steam engineer, the sanitary engineer, the bridge engineer, and the engineer of various other subdivisions of the great field of engineering, each an expert in his particular line. It has been found impossible for one man to combine within himself the detail knowledge necessary to practice all these branches with entire success. One branch alone is almost sufficient to make a life study, and the engineering specialist of to-day finds himself busily enough occupied in keeping abreast of the times."

Rivals for the Steam Engine.

The *Engineering News* says: "Two rivals for the steam engine in its usual form are now receiving much attention—the steam turbine and the gas engine. Which one is eventually to displace the reciprocating steam engine for the direct driving of dynamos is a matter of doubt, but the Westinghouse Machine Company, which builds the well-known Westinghouse steam engine, is preparing itself for either event by embarking in the manufacture of both steam turbines and gas engines. It has recently placed both upon the market. The turbine is of the Parsons type, which has for some years been on the market in England. The gas engine is a new design, the result of some years of experiment by Mr. George Westinghouse. It is a two-cylinder engine, using the Otto cycle, but with a governor which controls the admission of both air and gas in such a way that an explosion occurs at every stroke. The result is a very good regulation, such that dynamos driven directly on the shaft of the engine furnish an entirely satisfactory light, free from flickering. Two of the gas engines are now running in the Pittsburgh Exposition."

Import Duties at Antwerp.

The British consul-general at Antwerp "points out that 1895 was a period of great importance to the town of Antwerp, for an increased duty was placed upon oats, flour, and all kinds of meal, in spite of great opposition, while, on the other hand, the light and beacon dues were abolished and the quay and dock dues were reduced to a uniform rate of 50c. per ton net. The suppression of these dues has had a very favorable effect on the port, the importance of which is demonstrated by the fact that the value of the imports last year was £55,085,200. It is satisfactory to find that out of 4,653 vessels, with a tonnage of 5,363,569 tons, which arrived at Antwerp last year, no less than 2,683 were British, with an aggregate tonnage of 3,078,960 tons, an increase of 261,582 tons compared with 1894. In dealing with British commerce on the continent, Consul-General de Courcy-Perry mentions the various drawbacks under which our manufacturers labor in the contest with their foreign competitor—higher wages and the customs duties on English goods abroad, which raise the cost of production."

The Copper Market.

The Chicago *Journal of Commerce* says: "European demand is the factor of greatest moment to the copper industry of this country. The outward movement has been maintained at a very high rate all this year, clearly indicating an unprecedented consumption in Europe. Foreign requirements have necessitated the shipment abroad of 199,812,480 pounds of fine copper during the first nine months of 1896, against 109,421,760 pounds during the same period in 1895. Notwithstanding these enormous exports the total visible supply of copper in England and France, and afloat thereto from Chili and Australia, is 18,693 tons less than a year ago. The extent of the export movement may be better appreciated when we state that the exports of copper from the United States, from January to September, inclusive, average 22,201,386 pounds per month, which is equivalent to more than the entire output of the following copper mining companies for the nine months of the year at the following estimated monthly rate of production, viz.:

Mines.	*Pounds.*
Anaconda	10,250,000
Calumet & Hecla	7,600,000
Tamarack	1,350,000
Quincy	1,350,000
Osceola	525,000
Atlantic	425,000
Kearsarge	200,000
Wolverine	185,000
Total monthly output, 8 mines	21,885,000

We have had a protracted period of under-consumption in this country, but when normal conditions prevail Europe cannot count on receiving such heavy shipments of copper from the United States."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

While the volume of general trade has not increased materially, new conditions are favorable to an early improvement. Notwithstanding many interior merchants prefer to wait until after election before placing orders, and others are willing to order subject to cancellation should the movement for free coinage of silver be successful, sentiment at larger business centers regards the success of the campaign for sound money as assured. In some instances merchants are discounting that view of the situation by placing orders. Features of the business week are the continued advance in price and strength of wheat and the maintenance of a large volume of wheat exports, notably to India and Australia. While wool is no higher, holders have sold enough to render them indifferent to immediate business, and are holding stocks for full figures. While new orders for iron and steel products are not being placed freely, they would be if makers would accept current quotations for 1897 delivery. Southern pig is 25c. higher, and, notwithstanding the growing export trade in iron and steel has been checked by higher ocean freight rates and cut prices by German steel makers, it is anticipated that within three weeks the domestic demand will meet expectations.

Unfavorable weather early in the week was more effective than usual in depressing general trade, owing to light interior stocks and merchants being in the habit of ordering for immediate wants only. A hardening tendency in money emphasized the situation. Mercantile collections continue difficult to make, except in the larger spring wheat states and adjacent territory, where collections have been easier on the advance in and free shipments of wheat.

Cotton goods continue in unsatisfactory demand. Mills are running on full time, but stocks tend to increase again, as jobbers and other wholesalers are slow to pay the advance asked while having lower-priced stocks on hand. Depression in woolen goods continues marked, the mills running being on part time or on samples.

Prices continue the upward tendency of several weeks past; shoes, leather, southern pig iron, wheat, wheat flour, canned goods, Indian corn, oats, pork, coffee and print cloths being higher, petroleum lower, and cotton, anthracite coal, lumber, sugar and various finished products of iron and steel unchanged. It is pointed out in BRADSTREET'S that the stronger position of prices late in the current year is shown by a relatively small number of decreases compared with three months ago, an almost equal number of increases in price, as well as of prices practically unchanged on October 1, compared with July 1 last. Out of 34 articles, products, etc., for which prices were higher on October 1 than on July 1, 16 are food staples, in addition to which are cotton, wool, hemp, flax, sheetings, pig iron, tinplates, coal, petroleum, rubber and tobacco. The inference is drawn from the indicated tendency of prices to advance that low-water mark has been reached, and that whether the tide of trade is to continue to rise depends very largely upon ourselves.

Bank clearings totals amount to $994,000,000 this week, 6 per cent. less than last week, 14.6 per cent. less than in the second week of October, 1895, and 28 per cent. less than in the corresponding week of 1892. The increase, as contrasted with the like period of 1894, is 4.6 per cent., and as compared with 1893, nearly 6 4 per cent.

The total number of business failures reported throughout the United States this week is 279, 12 fewer than last week, 10 less than in the second week of October, 1895, but 26 more than in the corresponding week of 1894. As compared with the second week of October, 1893, this week's total shows a decline of 61.

On the Pacific coast trade has been stimulated by the advance in the price of wheat and continued activity in exports of lumber and other staples, notably to Japan, Australia, South Africa and India. Trade is reviving in the San Joaquin valley, Cal., since the completion of a competing railroad.

Speculative interests in the New York stock market show a general disposition to curtail engagements pending the election. This has resulted in both covering of "shorts" and scattered liquidation of "long" holdings, the latter predominating. Bears have taken advantage of the latter fact to depress prices, and the market is narrow and utterly professional. The most unsettling factor is the hardening of the money market due to the disposition of financial interests and the general public to strengthen their position. Large gold engagements are announced, nearly $7,000,000 have been taken in London this week for shipment hither, and exchange is weak at 4.83¾@4.84, the Bank of England having made no advance in its discount rate, which remains at 3 per cent., though discount in the London open market is up to 2¾ per cent. Foreign opinion on both the political and financial outlook here has improved, but it has not produced any notable accession of European buying, the disposition of the public there as well as here being to wait.

Exports of wheat (flour included as wheat) from both coasts of the United States and from Montreal this week amount to 4,156,817 bushels, against 4,050,000 bushels last week, 2,409,000 bushels in the week one year ago, 3,192,000 bushels two years ago, 2,709,000 bushels three years ago, and as compared with 3,270,000 bushels in the corresponding week of 1892.

Business throughout the Province of Ontario is of moderate volume, but is satisfactory, as prices generally are firm, and those for wheat higher. Montreal jobbers report orders are light and collections as slow as heretofore. Only an average business has been done at Quebec City, lack of activity in the shoe industry having been felt more than in some other lines. The Halifax fish market has improved, and the output of coal from Cape Breton, Nova Scotia, mines is larger than in 1895. Crop reports from Newfoundland are satisfactory, and the price of fish at St. John, N. B., has advanced. Bank clearings at Winnipeg, Hamilton Toronto, Montreal and Halifax amount to $21,093,000 this week, which is a slightly smaller total than last week, and slightly larger than in the corresponding week last year. There are 30 business failures reported from the Canadian dominion this week, against 37 last week, 37 in the week one year ago, 39 two years ago, and 34 three years ago.

FINANCIAL.

The Money Market.

The firmer feeling and more conservative tendencies in the New York loan market have continued to make themselves felt throughout the past week. The disposition of every species of interest, great or small, throughout the country, to strengthen themselves prior to the election, could not fail to have such an effect. The demand for gold, especially from the interior, continues, and supplies of funds in the market have been considerably curtailed. Practically nothing is doing in commercial paper, rates for double names being nominally 7@9 per cent. Time money is virtually unattainable. While 6 per cent. is quoted for all dates, there are virtually no funds offering. In the call loan market there has been more or less disturbance of standing arrangements, and rates have been irregular but generally higher; the extremes have been 4@10 per cent., but the bulk of the business on the Stock Exchange this week has been at 5@7 per cent. Banks here have generally marked up their loans to full 6 per cent.

The New York Banks.

Continued demand for money from the interior seems to have offset the receipts of foreign gold last week. The increase in average specie shown by last Saturday's bank statement was $2,649,000, while legal tenders decreased $2,638,000, the net result being a gain of only $11,000 in surplus reserve. On the other hand, the statement was favorable so far as it showed increases of $3,227,000 in loans and of $3,751,000 in deposits, the surplus reserve decreasing $926,000. The figures of the statement compare as follows with those of the preceding week:

	Oct. 3, '96.	Oct. 10, '96.	Changes.	
Loans	$453,106,000	$456,393,300	Inc.	$3,227,300
Specie	55,801,100	58,450,400	Inc.	2,649,300
Legal tenders	74,408,200	71,770,000	Dec.	2,638,200
Deposits	454,733,100	458,484,800	Inc.	3,751,700
Circulation	19,960,400	20,295,800	Inc.	335,400
Total reserve	130,209,300	130,220,400	Inc.	11,100
Reserve required	113,683,275	114,621,200	Inc.	937,925
Surplus reserve	16,526,025	15,599,200	Dec.	926,825

At the corresponding period last year the surplus reserve was $14,176,900, against $60,847,325 in 1894.

The Boston Banks.

	Oct. 10, '96.	Oct. 3, '96.	Changes	
Loans	$161,179,000	$160,711,000	Inc.	$468,000

Foreign Exchange.

Renewed supplies of commercial bills and a falling off in the inquiry consequent on the hardening of money rates created a depression in exchange this week, and have led to further engagements of gold in London and Paris for shipment to this country. As nearly as can be estimated the gold engagements amount in the aggregate to $7,000,000 or more, the last named sum having been withdrawn from the Bank of England for American account. Importers are, however, somewhat reticent about transactions of this kind, which is believed to be connected with the fact that a considerable portion of the current specie imports are due to the payment of a premium for gold or for calls on gold. The premium for call gold has been

quoted ¼ @⅜ per cent., and 60 to 90 days' privilege to call gold at 1¼ @1½ per cent.

In the middle of the week the exchange market indicated a disposition to harden on the general belief that the Bank of England rate would be raised. This was considered so probable that money at London had a sharp anticipatory advance, discounts rising from 2⅛ @2⅜ per cent. to 2¾ @2⅞ per cent. It was reflected here by an advance in the posted rate for sight sterling from 4.84½ to 4.85, and by a harder tone in actual business for demand bills, which held at around 4.83¾ @4.84. The news on Thursday that the Bank of England had made no change in its discount rate was a surprise and had an immediate effect on exchange. Posted rates were reduced ½c., to 4.81½ @4.84½, and actual business was done at 4.83½ @4.83¾ for demand, and at 4.80½ @4.81 for long bills. On Friday the market was dull and weak, and $3,300,000 gold was engaged in London.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

4.81½	4.81½	4.81½	4.81	4.81	4.80¾

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.84¼; commercial bills, 4.79½ @4.79¾; francs, 5.22½ @5.20⅝; reichsmarks, 94⅝6@95.

The Bank of England rate, as stated above, was not changed on Thursday, but remains at 3 per cent. The bank during the week lost £1,916,000 specie, and its percentage of reserve is 50.26 per cent., against 50.67 per cent. last week. In the London open market discount, after rising to 2⅞ per cent., fell, on the disappointment regarding the bank rate, back to 2⅝ per cent. Call money was also up to 2 per cent., but declined to 1¼ @1½ per cent. The Paris and other continental money markets are all firm and higher, discount in Berlin being 4⅜ per cent.

Imports and exports of the United States for the month and nine months ending September, 1895 and 1896 (preliminary figures for 1896, corrected to October 14, 1896):

The following table shows the imports (exclusive of specie) at the port of New York for the week ending October 9, 1896:

	1896.	1895.
Dry goods	$1,531,792	$2,528,702
General merchandise	6,398,486	7,735,299
Totals for the week	$7,930,278	$10,264,001
Previously reported	351,905,382	400,707,146
Since January 1	$359,835,660	$410,971,147

The exports (exclusive of specie) from New York to foreign ports for the week ending October 13 were $832,305 below those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$7,591,225	$5,883,033
Previously reported	292,364,202	261,460,459
Since January 1	$299,955,427	$267,343,492

Silver.

The silver markets have declined further this week on decreased Indian and Eastern demands generally, while some credence is given to reports that speculators who in the summer bought for a rise are apparently convinced that the free silver cause in this country is already defeated and have liquidated their holdings both here and in London. At any rate, the price of bars in the latter city declined to 29¾d., the New York quotations falling to 64½c. per ounce, a slight rally occurring at the close of the week. Bullion certificates here have been 65¼ @64⅝c.

THE STOCK MARKETS.

The New York Stock Market.

Speculative conditions have become decidedly unsatisfactory. The Wall street market this week has been narrow and professional in quality and nervous and unsettled in tone. The approach of the election apparently results not only in cutting off the little outside interest that has heretofore developed, but in creating a decided inclination on the part of the larger interests to reduce their outstanding engagements to a minimum. The fact that the tenor of current political news is favorable to the success of sound money has failed to check this tendency, mainly because of the hardening of the money market and the conservative disposition which affects holders of capital throughout the country. Banks have generally marked up loans, and it appears to be difficult to obtain money for speculative purposes. The favorable condition of our foreign trade, the export demand for our cereals and other products, and the consequent decline of exchange and renewal of gold imports has for the time being failed to stimulate speculative sentiment as they undoubtedly would under ordinary circumstances. London, it is true, seems to be taking a more cheerful view of both the political and financial prospects here. The public there has been favorably impressed by the outlook for a sound money victory, and though the London market was disturbed this week by a fortnightly settlement that threatened to involve trouble in the Kaffir and foreign government departments, as well as by a sharp rise in money rates, renewed withdrawals of gold for this country, and an expected marking up of the Bank of England rate, American stocks continued to be relatively strong. It may be mentioned here that the Bank of England rate was not advanced on Thursday, though conditions would have apparently warranted such action. The better feeling toward our stocks abroad did not, however, result in foreign buying, at least on any appreciable scale. The market here, in fact, has, apart from the manipulation of small professionals in particular stocks, exhibited little beyond the tendency of the larger shorts to cover and of holders of long stocks to sell, the object in each case being to reduce obligations in the face of the renewed stringency of money and the possibility that current estimates of the popular verdict at the polls next month might be mistaken. This selling, on the whole, has outbalanced the buying and caused declines throughout the stock list, while the room traders have naturally taken advantage of the situation to press stocks for sale, even though they were prompt to cover where such operations displayed a profit. These conditions have added to the uncertainty and undecisive character of the week's trading. On Friday the market was exceedingly dull and irregular in its tendency.

There was little in the actual movement of securities and prices during the week that would call for extended comment. Sugar has been the most active stock. The prices for refined have been advanced, but the position of the American Sugar Refining Company's stock is affected by the absence of support and the continued circulation of reports that a powerful combination of capital is to engage in competition in the refining business. These reports are generally discredited. Nevertheless, the price of sugar stock fell from 109 to 106¼, though its daily fluctuations make it rather difficult to follow the course of speculation in the security. The other prominent trading stocks display similar declines, St. Paul going from 71 to 69¼, though it is stated that interests which sold at higher prices have been repurchasing their stock. Burlington went down from 69⅞ to 68¼, and Rock Island from 61⅛ to 59½. The coal stocks have been less in evidence than usual, though Reading Junior securities were active and the stock (all assessments paid) after touching 23⅞ fell to 22¾. Tobacco was a strong feature on covering, while Bay State Gas broke on the news on Friday that temporary receivers had been appointed for the property.

Boston Stock Market.

The market has shown a fair amount of activity, with railroads holding up in value. Atchison advanced ½ point, with Chicago, Burlington & Quincy ⅜ points lower. Mining stocks have been easier, Boston & Montana falling off 4⅝ under heavy trading. Sugar has met with an active sale, with no change in prices, while Bay State Gas has met with large attention and sold down ¾ point for the week.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE FEATURES.

INCREASED CONFIDENCE IN AN EARLY REVIVAL OF DEMAND FOR STAPLES—STRENGTH OF THE MARKETS FOR WHEAT, IRON, WOOL AND LEATHER.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, October 16.—The rainy weather has affected business unfavorably in all departments of the merchandise market, and general conditions are steady. The money market is quiet, but it looks as though the steady tone would hold until after the election. Banking institutions and private lenders are not inclined to put out much money at present. Call money is nominal at 6 per cent., with little time money offering, most sales on four months being at 6½ @7 per cent. for renewals, and 7 per cent. and upward for new obligations. The boot and shoe market is firm, and fair orders for women's-wear are being placed. Men's-wear goods for spring are quiet, as with values tending higher manufacturers are not disposed to accept large orders ahead at present prices. Leather is quiet but higher, with hides moving slow, but scarce and firm.

Providence, October 16.—Woolen goods manufacturers still complain of dull trade. Mills that are running are mainly with but a portion of their capacity, and some are employed in getting out samples. There is no improvement in cotton manufacturing.

Philadelphia, October 16.—There is a little more inquiry for wool, and sales are being made at fair prices. The market is firm. Textile manufacturers, as a rule, are running on short time, though there are consumers who have orders ahead to keep them busy for some time. There is a fair demand for dry goods. Hides, leather, etc., rule firm, with a fair demand. A little activity prevails in drugs, but for paints and glass the market is quiet. The outlook for a settlement of the differences between the employees and the manufacturers of window glass looks more promising. The recent meetings of the National Drug Association and the National Paint, Oil and Varnish Association have had a tendency to stimulate local dealers, and a good season is anticipated after the excitement of the political contest has passed. General complaint is still made in all lines of the difficulty in making collections. Iron continues steady, prices ruling low; there is a disposition to place orders for future delivery, but there is an unwillingness on the part of manufacturers to accept the terms.

Pittsburgh, October 16.—Local business conditions compare favorably with the same period last year. The volume of business done so far during the fall season has been fully equal to expectations. Some complaint is still heard as to collections, and in many instances notes are being offered to close accounts due. A number of good-sized sales are reported in the local iron market. There is a fair demand for finished material, and prices show an improving tendency. Prices for raw iron have changed but little, and the market is firm at present quotations.

Baltimore, October 16—Business has been rather quiet. Houses having salesmen on the road report that orders coming from the south are small in quantity. This is attributed to the recent decline in cotton, which has made buyers in that section very conservative in their orders. Collections are keeping up to the usual average for this season of the year.

Buffalo, October 16.—There is no improvement in the business situation, either in wholesale or retail. The suspension of the Bank of Commerce this morning created some talk, but no uneasiness in financial circles, as all the banks are carrying a good reserve and are believed to be in a healthy condition.

West and Northwest.

Cincinnati, October 16.—Business shows no improvement. Money is easier, and country bank balances here are increasing.

Cleveland, October 16.—The week has developed no specially new or noteworthy features in the general commercial situation other than an apparently improved sentiment regarding the outlook. Collections continue slow.

Detroit, October 16.—Trade in general continues only moderate in volume. Owing to continued slow collections, merchants are extremely conservative.

Chicago, October 16.—There is a fair volume of business with manufacturers and jobbers, and the tone is more confident. Everything is held firmly, and there is a disposition in some quarters to discount the effect of the probability of the success of sound money next month. Orders for dry goods and clothing are not increasing, but are fair for the season. Shoes are selling well, and cheaper grades have advanced 5c. to 10c. per pair, but better grades are selling at the old prices. The former have been selling at a loss, and hides and leather having advanced, shoes sympathized. Sole leather has advanced 2c. per pound, and calf skins are held at full prices, with several round lots sold to eastern manufacturers. Many of the large consumers, however, are holding off until after the election. Hides are strong, with new advances. Tanners' stocks are not large, and the taking off by packers of hides is only fair. Advances are noted in canned vegetables, California dried fruits and sugars, and a fair number of new stocks are being purchased by the country. Steel manufacturers say they can place

plenty of orders if buyers are allowed to insert a clause in their contracts giving them the privilege of cancellation in case of the success of the silver movement at election. Large sales of pig iron are reported for extended delivery at full prices. Lumber is wanted in the corn section to build cribs, and sales have increased. Butter and eggs are higher, the make of the former being lighter. Wool receipts, 524,878 pounds. Bankers are loaning fairly. The statement of the national banks' condition October 9, compared with July 14, show a loss of $10,100,918 in deposits and $9,593,651 in loans. Collections have greatly improved.

Louisville, October 16.—The general tone of business is better, and a fair volume of trade in all lines is reported, with collections reasonably favorable.

St. Louis, Cctober 16.—Purchases continue largely for filling-in purposes, although wholesalers of staples report a gradual increase in sales. Conditions are steadily improving, and manufacturers and jobbers are anxiously awaiting the settlement of the presidential question. At present, while values in some lines are materially higher, there is that uncertainty which precludes transactions for future delivery. Particularly is this true as regards boots and shoes. The hide market is strong, but still local tanners are buying sparingly. There is some inquiry for pig iron, but actual sales are still light. Higher prices for the leading cereal show its effect on collections, which are better. The mills have reduced the price of iron bars to 1.15c. f. o. b. at East St. Louis. Soft steel bars and shapes are in better demand. Tin is lower.

Kansas City, October 16.—Business is very dull. Collections are slow.

Milwaukee, October 16.—Trade in general is quiet and but little activity is apparent, as transactions of importance are being delayed until after the election. Collections are slow.

St. Paul, October 16.—With a few exceptions the general trade situation shows some improvement over last week, but the number of small orders is as pronounced as during weeks past, showing a disposition to hold off until after election. Collections are good.

Minneapolis, October 16.—The movement of merchandise in lines that usually show activity at this season is of sufficient volume to be satisfactory, and country collections are good. The flour output is large, with fair sales. The situation in lumber is unchanged.

Omaha, October 16.—Filling-in orders for dry goods and boots and shoes have considerably improved business in those lines. The grocery trade holds up in good shape. Collections are only fair.

Duluth. October 16.—There is no material change in the trade situation from last week. Flour mills are busy, and there is more inquiry for lumber, though lake rates for the latter are held firm and there is not much movement.

Southern Cities.

Charleston, October 16.—The trade report good business in all lines except in phosphate, shipments of which are very light, with hardly any demand.

Savannah, October 16.—No improvement is shown over last week as regards trade and collections. The prices of pale rosin and turpentine have increased. A falling of in naval stores receipts is reported. Shipments remain the same.

Atlanta, October 16.—Trade and collections are good.

Augusta, October 16.—Wholesale business is not up to that of the past few weeks, with collections fallen off somewhat. Retail trade is fair.

Jacksonville, October 16.—There is a slight dropping off in wholesale and retail trade. Collections are coming in slowly. Big increase is reported in travel.

Birmingham, October 16.—Trade conditions are unchanged from the previous week. Collections are only fair.

Chattanooga, October 16.—Business is barely steady. Everything is waiting for the election to be decided.

Memphis, October 16.—General trade is good, especially in dry goods and hardware. Collections are fair.

Nashville, October 16.—This week's business has been good in all leading lines. Groceries, shoes and dry goods are active. Hardware is up to the average. Payments by the country trade are good. The city retail trade has picked up, owing to the good weather. Banks are lending sparingly. Current collections provide ample funds. The sentiment is healthy as to the business outlook.

New Orleans, October 16.—The country order trade is large, and collections are more satisfactory. Cotton exports are restricted by scarcity of ocean freight room. The market is in buyers' favor. New Louisiana sugars open 3@3½c. Molasses 30c. The rice crop is short. Millers are paying full prices. Recent bank statements are very satisfactory. All legitimate wants for crop movement and trade discounts are well taken care of.

Galveston, October 16.—There is no feature worthy of note in this week's trade. Interior merchants are buying cautiously, and purchases are confined mostly to shorts. Farmers no longer hold cotton for better prices, and, as a result, country merchants are enabled to pay their accounts, which they seem doing fairly well.

Pacific Coast.

San Francisco, October 16.—Commercial markets are quiet, though prices in all lines are holding up. Trade is reviving in San Joaquin valley, owing to the competition of competing railroads. Wheat is still active and freights firm. Fruit and produce market is fairly active.

Portland, October 16.—Collections are better and general trade conditions continue to be benefited by the rise in wheat. The hop market is firmer. Little or no wool is selling.

Tacoma, October 16.—A China steamer leaves tomorrow with a full cargo of lumber. Business is active. Mills are running overtime.

Seattle, October 16.—General trade is fair in most lines and good in some, an increase being shown for the half month over September. A cargo valued at $100,000, also 800,000 feet of lumber, were shipped to Japan this week; also $33,000 worth of general goods to Central America.

Canada.

Toronto, October 16.—There is a quiet wholesale trade, with no important features. Prospects are generally considered satisfactory. Leading staples are firm in price. Wheat is higher at 71c. to 72c. for red and white at Ontario points.

Montreal, October 16.—There is very little change in the business situation this week. Wholesale houses report orders light and collections still backward. Exports of apples continue heavy. Quebec City advices report trade about the average, although the shoe industry is inactive.

Halifax, October 16.—A moderate amount of business has been done during the week, and country collections are fair. There is a decided improvement in the market for fish, and dealers are encouraged. Shipments of coal from the Cape Breton mines show a considerable increase over last year. The crops in Newfoundland are satisfactory, and have been gathered in good order. St. John, N. B., reports an advance in the price of fish. Lumber exports were small during the week. The lime trade, so far as export business is concerned, has been unusually dull this season.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.

Dry Goods.

The market ruled quiet, due in part to the stormy, unfavorable weather, which has interfered with demand. The trade are working close to immediate necessities in seasonable goods, and only renew supplies as they get short, hence the weather has great influence on operations. The cotton-goods situation continues unsatisfactory. Stocks at first hands are well reduced, but the mills are running quite full, and buyers will take few goods at the advance asked, particularly where they have fair stocks bought at the cut prices. Raw cotton has shown more weakness, although yet costing above the parity of the price asked for goods. Printed fabrics are going well, but are bought only as needed. Ginghams are quiet. Dress woolens are quiet with agents, although some mills are well sold up. Jobbers have bought foreign goods quite freely for the spring trade, and will now turn attention to domestic goods. Men's-wear woolens are yet quiet, although fair orders for cheap-cost fabrics in light weights have been placed.

Wool.

There is a very strong tone to wool, but there have been few sales. This is due in most part to the strong views of holders, who have sold enough to make them feel easy and are now in position to wait. Bids on many large lines of both domestic and foreign wools are pending, with only a fraction of a cent between the views of buyer and seller. Most of the business continues confined to territory grades, and prices are firm at 30c. scoured, for choice lines of fine medium and fine, while choice staple lots would go higher. Fleece wools are held firmly, and most dealers have not opened their wools yet. Foreign wools remain firm, with moderate sales. Melbourne sale opened October 14, with prices 5@7½ per cent. lower than the average last year. London market is rather firmer.

WHEAT OUTLOOK IN ENGLAND AND ELSEWHERE.

The Glasgow *Herald* says: "Whatever may be the experience of Scotland with the oat crop, should the present weather continue, England seems to have been singularly fortunate with her wheat. While even as far south as Buckinghamshire barley and oats are still standing out in the fields, as in Scotland, wheat was garnered unusually early. Indeed, according to the annual review which Sir J. B. Lawes has just supplied to the *Times*, we must go back twenty-eight years to find a parallel to the present harvest. In 1868 the wheat harvest began at Rothamsted on July 14; this year it began on July 16. The wheat season, in fact, was almost phenomenally fortunate, beginning with a good seeding time last autumn, followed by a warm, dry winter and a hot, dry summer, with just enough rain in June to prevent the crops from ripening too fast, as they did in 1868. Then the crop is remarkable for the weight per bushel. Sir J. B. Lawes mentions two instances in which the weight per bushel reaches 64 pounds, and there is no such weight on record since the experimental farm was established in 1844. The average yield of this farm has been 35¼ standard bushels of 60 pounds per acre, but of course that cannot be taken as the average of the whole country, which is probably nearer 30 bushels. With such a good crop how is it that wheat is rising—for the average prices given by the Board of Agriculture show an advance of 1s. 8d. per quarter since the end of July? For explanation we have to examine the entire position of breadstuffs. Our crop of wheat this year is computed at something over 7,000,000 quarters. Between now and the end of the harvest year in 1897 we have to feed a population estimated to average 39,500,000 souls. At the rate of six bushels per head this will mean about 30,000,000 quarters, or, say, 23,000,000 quarters in excess of our domestic production. Now in 1893–94 we imported 22,432,751 quarters; in 1894–95, 24,872,098 quarters; and in 1895–96, 22,509,340 quarters. Not only was the quantity in 1894–95 largely in excess of the preceding year, but it was about 3,000,000 quarters more than was required for consumption. This accumulation of stocks largely accounted for the great depreciation in the price of wheat last year. Most of that surplus, however, has now been used up, and the quantity imported in 1895–96 was less than we shall have to import in 1896–97. It is said that the quantity of foreign wheat in warehouse has been reduced to less than 2,000,000 quarters, and this reduction of stocks explains the gradual rise in prices which is gladdening the hearts of the British wheat growers. Whether it will go any further, or how far it will go, cannot, of course, be said with confidence, but Sir J. B. Lawes, for one, seems to be of opinion that prices will continue to improve. It all depends on the extent to which the low prices of the last two or three years may have discouraged wheat-growing abroad. The United Kingdom is practically the only market for the surplus wheat of the world, and the surplus wheat has been dumped upon us of late years at such a rate as to bring British farming to the verge of ruin, though it has also given us cheap bread in a time of great industrial depression. So long as the wheat-growing nations can obtain a price from us that will cover the cost of production they will go on growing. When it ceases to pay to grow wheat for export the supplies must be curtailed, and it is possible that that point has already been reached both in North and South America."

THE TRANSVAAL BUDGET.

The London *Times* says: "The annual estimates of revenue and expenditure of the Transvaal Republic, which were issued at the end of August, furnish much food for thought and reflection. The total revenue is estimated at £4,462,193. The chief items of income are:

Customs	£1,200,000
Gold prospecting licenses	482,000
Hut-tax and native poll-tax	162,925
Fines, special (the Reformers!)	212,000
Postal	110,000
Telegraphs	86,000
Railway	342,327
Stamp dues	200,000
Transfer dues	275,000
Diggers' licenses	58,872
Stand (building plot) licenses	54,200
State portion of profit on dynamite	35,000

"It will at once be perceived how heavily the Uitlander is taxed; but British public attention should be drawn rather to the expenditure than to the revenue side of the account.

EXPENDITURE.

War	£943,510
Total salaries	898,041
Police	242,421
Telegraph Department	80,909
Postal Department	44,374
Public Works	730,000
Special expenditure	585,350
Judicial Department	19,241
Administration of Justice	38,850

"The war item of expenditure last year was under £200,000; this year it is £943,510, of which £375,000 is for the 'purchase of firearms.'

"The education of the country figures for £103,000, and out of this large sum the grants to English children do not amount to £800. I have the authority of Mr. Robinson, of the Education Department, for this statement. When will the British government and the British public fully realize Uitlander grievances? Of the £4,462,193 of revenue, it may be safely stated that the Uitlanders pay £3,500,000.

"What does this state, which is spending over £4,000,000, produce? It produces now about £7,000,000 worth of gold, a small quantity of coal sold for export, beef and mutton and corn, etc., but no manufactures. Practically the £7,000,000 realized from gold has to bear all the taxation. Here is a serious problem for European political economists to solve. Can this South African republic afford to spend these large sums, and where is the interest on £150,000,000 of European capital which have been expended in this country to come from?"

BRITISH VIEW OF THE AMERICAN BICYCLE INDUSTRY.

A correspondent, who writes in the London *Times* on the development of the bicycle industry in the United States, says that very little of the boasted ingenuity of the Americans was devoted until very recently to machines or devices of sport. "Until eight years ago it was generally predicted that the bicycle could not come into extended use in America owing to the bad condition of the roads. The 'velocipede,' a very rude machine indeed, had a certain vogue in 1868 and for a year or two afterwards, but with its failure two-wheeled machines passed out of sight for many years. The old high-wheeled bicycle attracted almost no attention in America. Even the modern safety came only slowly into use. But, once taken up, its development has been remarkable. Prior to 1885 the number of domestic manufacturers was only 6, who in that year turned out about 11,000 bicycles, which were probably fewer than the importations. In 1890 there were 17 factories, which produced about 40,000 cycles. In 1894 the number of factories had increased at a rapid rate, and bicycles to the number of 100,000 or 125,000 were turned out. In 1895 the production bounded up to about 600,000 cycles, and the number of manufactories is more than 500, counting none which turns out a product of less than a thousand machines a year. The capital invested in these larger factories is placed at $90,000,000, and the lowest estimate of the output for the present year is 1,000,000 completed bicycles, worth $60,000,000. It is estimated that the capital invested for the manufacture of bicycles, tubes, and all collateral undertakings is now about $125,000,000, and that 150,000 people are employed in designing, making and selling these various products. No complete cycles are now imported into the United States, and the American manufacturers, in the half-year ending June 30, 1896, exported cycles and parts worth $1,654,291, or nearly seven times the amount sent abroad in the previous half-year. Nearly half of this export has come to England. Germany is the next largest customer, France being next, while some shipments have been made to every European and South American country. Few American machines have gone to Australia or South Africa, the English manufacturer still holding these markets. The American manufacturers claim that, although their bicycles are much lighter, they are adapted to all descriptions of roads. Unless there is some check in the demand it seems likely that 40,000 or 50,000 American cycles of high quality will be offered in the English market before the close of 1897. In 1893 the best bicycles were selling at retail for $140; now the same quality of machine—perhaps much better—sells at $100. More than 3,000,000 bicycles are already in use in the United States. Nearly one person out of 24 has thus taken to a cycle. In France the proportion is only one in each 250. An agitation has been started for the improvement o roads, a movement which is likely to do much good. The bicycle has reduced the demand for horses and carriages, and in some cities has affected the income of tramways and cabs. On the railways bicycles are now carried free as passenger's baggage. In the first two weeks of July the railways running out of New York carried 75,000 bicycles for outgoing passengers. In America a cycle is known as a 'wheel,' and its rider as a 'wheelman' or 'wheelwoman.'

"Mr. C. Marston, of Wolverhampton, adds that it was in 1890 that the United States government increased their duty on English bicycles to 45 per cent. ad valorem. Under this protective tariff, with the invention of labor-saving machinery, stimulated by the high price of labor, American makers actually stand a chance of capturing our own market."

FOREIGN TRADE OF RUSSIA.

From the statistics given by Mr. Michell, the British consul-general at St. Petersburg, in his last report, "it appears that the foreign trade of European Russia, Finland, and at the Caucasian ports and custom houses (but excluding all the rest of the Asiatic frontiers) was valued last year at £126,721,924, as against £144,951,352 in 1894. This large decrease is due to the heavy importation by the Russian government in 1894 of gold and silver bullion; but if bullion is left out of the statistics for both years, the volume of the trade for 1895 exceeds that for the previous year by nearly £9,000,000. The exports last year amounted to £74,861,583, against £62,872,026 the previous year, while the imports declined from, roughly, £55,000,000 to £52,000,000, so that the exports exceed the imports by over £23,000,000, the satisfactory results to Russian trade of the year being attributed in great measure to the fixity of the value of the rouble, which the Finance Minister maintains, though at considerable cost to the country at large. The exports of breadstuffs from European Russia last year were less than the previous year in quantity (184,000,000 against 205,000,000 hundredweight), due mainly to a decline in the exports of barley, oats and maize; both wheat and rye showed an increase, that in wheat being over 10,000,000 hundredweight. The values are not given in the case of breadstuffs. As to other exports, flax comes first with a value of nearly £8,000,000, then timber, £4,250,000; linseed, £3,250,000; mineral oils, £2,250,000; eggs, £2,250,000 (the number of eggs is given at 1,411,000,000); hemp, over £2,000,000; sugar, £1,250,000; oil-cake, a little more than £1,000,000; while rape-seed, bristles and wool were about £750,000 each. As to imports, the values are not given, and it is therefore impossible to show their relative importance. Great Britain has a quarter of the total import and export trade of Russia. In 1894, the last year for which the figures are complete, the United Kingdom had 26 8 per cent. of the exports, and sent 23.7 per cent. of the imports. This latter proportion has remained very steady since 1888. In that year it was 25 9; in 1889, 23; in 1891, 21.9; in 1892, 25; in 1893, 25.5, so that, in spite of fluctuations in amounts, German competition and Russian protective legislation, British imports maintain their position, and in 1894 were higher in absolute values than for many years previously."

RETURNS OF BRITISH RAILWAYS.

A St. Louis *Globe-Democrat's* Washington special says: "The Westminster *Gazette* publishes the following railway returns of the United Kingdom for the year 1895, which contains much interesting information. At the end of 1895 there were 21,174 miles of railway open for traffic in the United Kingdom, of which 9,738 were single lines. In the last twenty years about 4,500 miles of new line have been opened for traffic, and construction still proceeds at an average rate of about 200 miles a year. Over £1,000,000,000 of capital is now sunk in British railways, which compares with only £630,000,000 twenty years ago. Then the average cost per mile of line open was £37,833, now it has grown to £47,280. For the year 1895 the total gross receipts of the British railways were £85,922,600. The working expenditure was £47,875,000, or 56 per cent. of the gross takings. The net receipts were £38,046,100, which represents a return of 3.80 per cent. on the total paid-up capital. Twenty years ago the gross receipts were £61,250,000, the proportion of working expenditure was 54 per cent. of the total takings, and the return on paid-up capital was 4.45 per cent. It is interesting to note a steady increase in the amount earned per mile of railway open, with a corresponding decrease in the amount per train-mile run. Thus, in 1871 the earnings per mile of line exceeded £3,000, while in 1874 the earnings per train-mile were as high as 5s. 8d.; in 1890 the earnings per mile of line exceeded £3,800, and for 1895 were £3,844, while the earnings per train-mile fell below 5s. in 1885, and for 1895 were 4s. 9¾d. These two facts in combination indicate increased traffic, with lower fares for passengers and cheaper rates for goods."

COMPETITION FOR BRITISH COLONIAL TRADE.

The London *Machinery Market* says: "It will be remembered that the Secretary of State for the Colonies, in November last, issued a dispatch to all of the colonial governors, in which he urged the extreme importance of securing as large a share as possible of the mutual trade of the United Kingdom and the colonies for British producers and manufacturers, whether located in the colonies or the United Kingdom. Mr. Chamberlain at the same time asked for a return giving particulars of foreign imports of any kind which had displaced or are displacing similar British goods, with a statement of the cause of such displacement. It was also remarked that specimens of goods of foreign origin, which were finding a market in the colonies, should be sent over to this country for the information of our manufacturers.

"We at that time dealt so fully with the importance of this movement on the part of the Colonial Office that there is no need to go over the ground again. The fact that continental and American manufacturers have somehow managed to get into close competition with us, not only in neutral markets but in those which by right are our own, has been widely discussed of late in the world of commerce and industry, and very naturally there has been some amount of speculation as to the cause of the apparent decline in popularity of home-made goods.

"The dispatch of Mr. Chamberlain has already borne some fruit, and specimens of goods of foreign origin, which are threatening similar British goods, have recently been received from Trinidad, Bermuda, Bahamas, Barbadoes and St. Lucia, and others have more lately come to hand from Melbourne. These have been exhibited at the offices of the London Chamber of Commerce, in Eastcheap, previous to their distribution over the country for the information of our manufacturers.

"The exhibition has been an instructive though not an imposing one. There has been little shown coming directly within the purview of this journal. Up to the present the specimens may be broadly classified under the headings of apparel and slops, cordage and twine, cotton manufactures, hardware and cutlery, hats, agricultural tools, and leather, silk and woolen goods. As far as quality and price

are concerned, it does not appear that our foreign rivals are greatly in advance of us, and we must confess that it is somewhat puzzling to discover reasons why such goods as those shown should be preferred above our own, when some of them are certainly of inferior quality, while the prices of those of a better class are on a par with our own. At the same time, there are details in which we have something to learn from our competitors. While we pack some of our hardware—locks, for instance—in untidy brown paper parcels, both Germany and the United States send them out in neat and substantial cardboard boxes. In the way of agricultural tools, too, it is not difficult to see why the American article is preferred. Spades for heavy digging and excavating and stable manure forks are made as light as is consistent with the necessary strength. Quite naturally those who have to use articles of this class, if the choice lies with them, will unhesitatingly select an article which is not only lighter but of a shape which more easily deals with material. The fact that the average British-made stable fork is a few ounces heavier than one of American make may appear a trivial matter, but these are little things which produce preferences and prejudices. Of course it would be impossible for the governors of the colonies to send home heavy machinery and agricultural implements under the present arrangement, though they might send photographs of them. It is admitted, however, that what we have said of American agricultural tools applies also to their implements—they are lighter and better designed to effect their purpose, and herein, no doubt, lies the secret of their success.

"The proposal that these articles should be sent over the country through the medium of the various chambers of commerce is very well in its way, but we should have liked to have seen them retained in the metropolis and displayed to better advantage. Each article ought to be shown side by side with examples of the goods we have been trying to persuade the colonies to buy, and then comparisons could be made and conclusions drawn. It is to be regretted that a body which does such excellent service as the London Chamber of Commerce has not the facilities at its disposal for organizing a permanent and representative exhibition of these goods. The proper place for such an exhibition is, of course, the Imperial Institute. But the Imperial Institute is inconveniently situated, and has developed into nothing more or less than a fashionable West End club, while those who welcomed its advent and supported the scheme for its foundation have begun to despair of it ever performing any useful function. A proposition has been made to the effect that the government should be requisitioned to provide funds for housing the specimens of foreign goods under the ægis of the London Chamber of Commerce. We heartily wish that useful body a better home than it has at present, and it is certainly not too much to hope that if our legislators would bring themselves to consider the amount of good it is doing, compared with the Imperial Institute, a means would be found of giving it a helping hand. The wealthy city companies, the day of whose usefulness is in many cases past, have on several occasions befriended the Chamber of Commerce when it has wanted a roof under which to hold a gathering patronized by a royal or state personage. If they would lend their purses towards helping it to do a work which has now passed out of their hands they would perpetuate their names as benefactors of industry and commerce."

THE WORLD'S SUGAR PRODUCTION.

The *Bulletin de la Chambre de Commerce de Barcelona* states that the amount of sugar produced in 1895–96 amounted to 2,837,000 tons, as against 3,486,500 tons produced during the season 1894–95, or a decrease of 649,500 tons. The following statement shows the countries of production and the amount supplied by each in 1894–95 and 1895–96.

Country.	*Tons* 1894–95.	1895–96.
Cuba	1,000,000	300,000
Porto Rico	52,500	55,000
Trinidad	52,000	50,000
Barbadoes	37,000	57,000
Jamaica	30,000	32,000

DISPLAYED.....25 cents a line, agate measure.

FINANCIAL.

Louisville, New Albany & Chicago Railway Company.

TO THE HOLDERS OF

Consolidated Mortgage 6 per cent. Bonds
General Mortgage 5 per cent. Bonds,
Equipment Mortgage Bonds.

The undersigned committee have prepared a plan and agreement for the protection of the interests of Bondholders, and have filed the same with the CENTRAL TRUST COMPANY of New York, dated October 10th, 1896.

Bondholders are requested to deposit their bonds and all unpaid coupons with the Central Trust Company of New York, 54 Wall Street, N. Y. City, under said agreement, on or before November 30th, 1896.

Holders of Consolidated Mortgage Bonds will receive a cash payment of $37.50 per bond at the time of deposit.

Negotiable Trust Certificates will be issued for deposited securities.

Copies of agreement may be had at the office of the Trust Company, or from members of the committee.

FREDERIC P. OLCOTT, Chairman.

J. N. WALLACE, Secretary, 54 Wall Street.
NEW YORK, October 10th, 1896.

Louisville, New Albany & Chicago Railway Company.

TO THE HOLDERS OF THE

PREFERRED AND COMMON STOCK:

Under an agreement between Frederic P. Olcott, Henry W. Poor, and Henry C. Rouse, Bondholders' Committee, and a syndicate which is to furnish cash necessary for the purposes of the Committee, holders of the Preferred and Common Stock of the Louisville, New Albany and Chicago Railway Company have the right to subscribe for new Common Stock of a proposed new corporation, upon the following terms: Preferred stockholders may subscribe for new Common Stock to an amount equal to their holdings of old Preferred Stock, at $7.50 a share, payable in cash, and to receive in addition new Preferred Stock for such cash payment. Common stockholders may subscribe for new Common Stock to an amount equal to one-third of their holdings of old Common Stock upon payment of $7.50 in cash on each share of the new Common Stock, receiving with each subscription in addition new Preferred Stock equal to the amount of cash paid.

Stockholders electing to avail of the privilege of subscription may deposit with the CENTRAL TRUST COMPANY of New York their certificates, duly endorsed, on or before November 30th, 1896, in exchange for receipts, under an agreement between the CENTRAL TRUST COMPANY of New York and the syndicate, dated October 10th, 1896, to which reference is hereby made.

Due notice will be given by advertisement and otherwise of the time when cash payments will be required.

NEW YORK, October 10th, 1896.

Central Trust Company of New York.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.——1896.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty-six years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-six years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 24, 1896.

As the campaign draws to a close the friends of sound money grow more and more confident of the result of the election, about which, indeed, from the outset there has been but little doubt. A great national party does not split and lose the bulk of its leaders on the eve of a great national contest with any reasonable hope of success; and that is the condition in which the Democratic party has been since the free silver plank was forced through at Chicago. All indications point in the same direction. The betting men, who are quick to follow the currents of public sentiment, are giving odds on McKinley's election, and as the days go by are finding fewer takers. As regards the east, the betting is only on the question of the pluralities, which are expected to be phenomenal. Arrangements are being perfected for the great sound money parade in New York on Saturday next, which is expected to surpass every demonstration of the kind hitherto made in the United States. On the part of the supporters of the Chicago platform there is apparent a greatly lessened feeling of confidence, which finds expression in charges of coercion on the part of employers to affect the result at the polls, and the usual allegations about the use of money to purchase votes. The outlook is bright for the sound money cause, but its advocates should not allow their vigilance or energy to be relaxed by any feeling of over-confidence. Victory will not be sufficient; it must be so emphatic that the free silver issue will be finally removed from American politics.

As usual, the docket of the Supreme Court of the United States, which has lately convened for the term, contains some important cases for early action by that tribunal. Among the cases advanced are one of the Bell Telephone Company cases, a suit to amend the Berliner patent, a number of Ohio and Indiana cases involving the validity of tax laws affecting express and telegraph companies, several from South Carolina arising out of the Dispensary law, and a number of land-grant cases in which western roads are involved. In the number of cases held under advisement in which early decisions are looked for are included the cases involving the constitutionality of the Wright Irrigation law of California, the Nebraska maximum rate controversy between the railroad commissioners of the state and some of the leading railway companies, and several others of interest beyond the localities immediately involved. The business of the court is in better shape than it has been for years, owing in large part to the relief afforded by the creation of the circuit courts of appeals.

President Cleveland's address at the Princeton sesqui-centennial was very timely and appropriate. His text was the duty of educated men as citizens. He pointed out that a government resting on the will and universal suffrage of the people has no anchorage except in the people's intelligence, and on this account the college graduate has imposed upon him a clear duty, that of being a constant monitor warning against popular rashness and excess. A particularly hearty commendation was given to the President's declaration that there are natural laws and economic truths which command implicit obedience, and which should unalterably fix the bounds of wholesome popular discussion and the limits of political strife, and that the knowledge gained in our universities would be sadly deficient if its beneficiaries were unable to recognize and point out to their fellow citizens these truths and natural laws, and to teach the mischevious futility of their non-observance or attempted violation. There was sound sense in his remark, while conceding the good already accomplished by our educated men in purifying and steadying political sentiment, that their work in this direction would be easier and more useful if less spasmodic and occasional.

For some time there has been complaint of the position taken by the Turkish government in relation to the emigration of the families of naturalized Armenians residing in the United States. When, in response to a Senate resolution in January last, President Cleveland transmitted a statement of the situation it was pointed out by Secretary Olney that certain difficulties surrounded the question of extending the protection of our naturalization laws to persons alien by birth who had never been within the jurisdiction of the United States, but Secretary Olney added that the Turkish government had on several occasions permitted the emigration of the wives and children of Turkish subjects who had come to the United States and here acquired citizenship, leaving their families behind them, and that the good offices of the United States ministers had been uniformly exerted to assist the emigration of such persons, but that the Turkish government had asserted a "discretionary power" to refuse to permit the emigration of families of naturalized Armenians under certain conditions. It now appears that the exercise of this "discretionary power" has been abandoned by the Turkish government. Secretary Olney has received a cable dispatch from the United States minister at Constantinople to the effect that he has at last obtained telegraphic orders from the Turkish government to permit the departure for the United States, with safe conduct to the seaports, of all the native Armenian women and children whose husbands and fathers are in the United States of America. The tact and zeal of Minister Terrell are declared to be mainly responsible for this outcome.

It will be recollected that last year a commission was appointed in New York state to test guns of American invention and manufacture, and to select one to be adopted for the state militia. The commission appointed recommended the selection of the Savage magazine rifle, but Governor Morton has declined to approve the report of the commission. The governor discusses the subject from several points of view, including the desirability of magazine rifles for state troops, and the possibility of Springfield rifles being supplied to the milita by the national government. In December last a bill was introduced in the Senate authorizing the Secretary of War to issue Springfield rifles to the national guard of the different states in exchange for other rifles now in use. The governor says that he does not think that this bill can properly be ignored in the consideration of the question, and he thinks it unwise, in view of the probability of the distribution of arms by the national government, and especially at a time of great business depression and a continued unsettled condition of financial affairs, to approve a report which would require a contract for the purchase of arms at a possible expense to the state of $300,000. As a matter of fact, the main consideration to be regarded in dealing with this question is the paramount importance of securing uniformity in the arms used by all the troops of the country, whether regulars or militia.

Judging from the statements contained in the annual report of Assistant Attorney-General Thomas, of the Post Office Department, the efforts of the postal authorities to reduce the fraudulent use of the mails to a minimum are meeting with notable success. It appears that the courts in every instance have sustained the department in the issuance of orders against the fraudulent use of mails. Lottery companies, Judge Thomas says, have moved to foreign countries. Mexico and Honduras seem to be the favored localities. It is learned that the names and addresses of those who answer the various alluring fraudulent advertisements and the letters written by them are sold in the market, the theory being that all such may probably be victimized. One enterprising firm advertised that it had three millions of letters for rent or sale. The green goods men, quack doctors, the advertisers who catch their victims with the word "free," bucket shop operators and various other concerns deal in these addresses and letters.

An effort will be made by the Russian governor, Grebnitsky, who is in charge of the Russian seal islands, to secure the adoption of a new treaty aimed at the regulation of the seal industry. There are ninety of the seal islands, located 200 miles from the Asiatic coast, and the governor resides 300 miles from Kamschatka City. The treaty which the distinguished Russian has in charge establishes a thirty-mile limit, and provides for a strict patrol system. He is given 500 native troops for this service, and has a force of two gunboats at command. Governor Grebnitsky is quoted as saying that the seal herds are constantly decreasing, and cannot last long at the present rate. This result, he says, is principally owing to the work of the poachers, who encroach upon the limits continually. With the small force at his disposal, and only the occasional assistance of two Russian war ships, he does the best he can to prevent these inroads, but all his work seems to be ineffectual. Next year it is proposed to establish a complete patrol.

The Chinese government has decided to make duties payable in gold or its equivalent, instead of silver taels. This is a change regarding which it is understood that Secretary Carlisle was informed some time ago when the Chinese ambassador conferred with him in reference to the customs rates of the Celestial empire. In a memorandum setting forth the changes the Chinese statesman declares that silver taels were authorized to be used in paying custom duties in Tao Kwang's time, and continued without change under the dynasty of Hien Fung. Since then the value of the silver has declined, he says, and in justice to China, which has now established international relations, both the necessities of the day and considerations of what is fair and right demand that the original value of the customs tael be reënunciated and the value of silver, at which China consented to collect duties, viz., three taels to the pound, be observed and adhered to.

WHY WHEAT HAS BEGUN TO ADVANCE.

The grain trade has finally been roused out of its lethargy by the apparent short supply of wheat in various exporting countries, and the consequent activity of speculation and advance in quotations. Nothing like the sustained interest shown in wheat within a fortnight at Chicago, New York, San Francisco, Baltimore, Minneapolis, Liverpool and other grain centers has been seen for years.

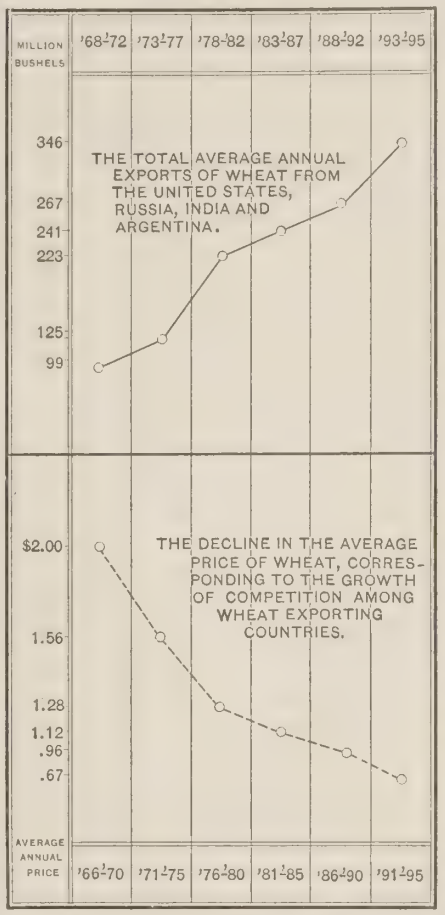
Talk of reduced supplies in Russia, India, Australia and Argentina, supported by advices of officially checked wheat exports from the Black sea, importations of wheat from the United States into India and Australia and repeated assertions that the crop in the United States is less than an average, have, together with Europe's small holdings, raised the question whether the turning point in the price of wheat has not arrived.

A jump of nearly a quarter of a dollar a bushel within two months is enough to command the attention of the commercial world, and coming as it does at a time when some people had begun to think the law of supply and demand was a myth, it is stimulating trade in general as well as reviving an interest in what constitutes the chief price-making influence.

The probabilities favor the maintenance of a higher level of wheat values. The trouble with a speculative market, generally, is that it does not move as it would if traders were better informed as to existing price-making influences. At this time traders possess the information regarding short supplies. It is childish to argue that the advance is the result of an attempt to "corner" the wheat of the world. Corners are possible, in part, only when actual conditions favor them. No practicable combination of men or money can create a corner in wheat unless actual famine impends. In that event the attempt to corner would perform a desirable function, by so advancing prices as to draw out scattered reserves and create as large a supply for immediate use as possible. No famine is now impending and no corner is possible. The course of wheat prices for years has been downward, largely because Argentina and India had blossomed into serious competitors with the United States for the trade of the wheat importing countries. Prices have thereby been forced down still further, and the chief wheat-buying countries have had their own way in securing supplies, because of the war of competitive offers from exporters in the United States, Russia, India, Argentina and Australia.

In the seven years from 1889 to 1895, inclusive, the world's crop of wheat, corrected from Beerbohm's totals by increasing the officially understated totals in the United States, increased from 2,137,000,000 bushels to about 2,500,000,000 bushels, or 17 per cent., and in the years 1889 to 1894, inclusive, from 2,137,000,000 to 2,566,000,000 bushels, or 20 per cent.; but in the meantime the price dropped about 30 per cent.

With 1896 come reports of 125,000,000 fewer bushels of wheat raised at home and abroad, small stocks held in Europe, and that India and Australia are importing instead of exporting the cereal. While the domestic crop is probably noticeably larger than the 412,000,000 bushels bull estimate, the excess is not sufficient to offset the deficiencies elsewhere, and the law of demand and supply is therefore quite likely to work for higher prices.



As to the prospect for prices Beerbohm, the London authority, says:

It will be well to compare the visible supply on October 1 for a number of years:

THE WORLD'S VISIBLE SUPPLY OF WHEAT.

Quarters of 8 bush. each,	*European, Beerbohm's.*	*American, Bradstreet's.*	*Totals, quarters.*
October 1, 1896	6,130,000	8,500,000	14,630,000
October 1, 1895	9,921,000	8,100,000	18,021,000
October 1, 1894	9,062,000	12,650,000	21,712,000
October 1, 1893	10,900,000	9,784,000	20,684,000
October 1, 1892	9,100,000	8,500,000	17,600,000
October 1, 1891	9,500,000	5,760,000	15,260,000

This small tabulated statement will show at a glance why buyers and holders generally have more confidence in the future of wheat than they have shown during the past three years. Statistics may err occasionally, but this season they leave no room to doubt that, apart from the Indian famine question, the legitimate state of supply and demand warrants at least a 30-shillings level of values for wheat.

Those who have been misled by the claim that wheat prices simply follow prices for silver up and down have had that notion rudely jarred within the past month, as silver prices continue to go down while quotations for wheat are advancing. The foregoing chart shows how the price of wheat has gone down corresponding to the increase of the total annual average quantity of wheat offered to importing by leading exporting countries. Within the period covered the price of wheat is seen to have declined to about one-third of what it was, while the annual available export surplus increased more than three times.

A total average annual exportation of about 99,000,000 bushels of wheat from the United States, Russia and India, in the years from 1868 to 1872, inclusive, more than doubled in ten years and more than trebled (Argentina included) in a quarter of a century. It is the exportable surplus of wheat which makes the price of the entire crop, and, whereas, four leading exporting countries sent abroad annually an average of only 99,000,000 bushels during the period 1868–72, they exported an annual average of three and one-half times as much during the last three years. Worse than that, from the American point of view, while the United States exported 65 per cent. of the world's total wheat exports annually in the period 1878–82, it sent abroad only 48 per cent. of the grand total exported from all countries during the past three years, owing to the keenness of the competition of cheap wheats from Russia, India and South America.

With three of these competitors temporarily out of the market, with a moderate supply at home and light foreign stocks, the prices-pendulum is, apparently, destined to swing upward.

WHY SILVER PRICES ARE DEPRESSED.

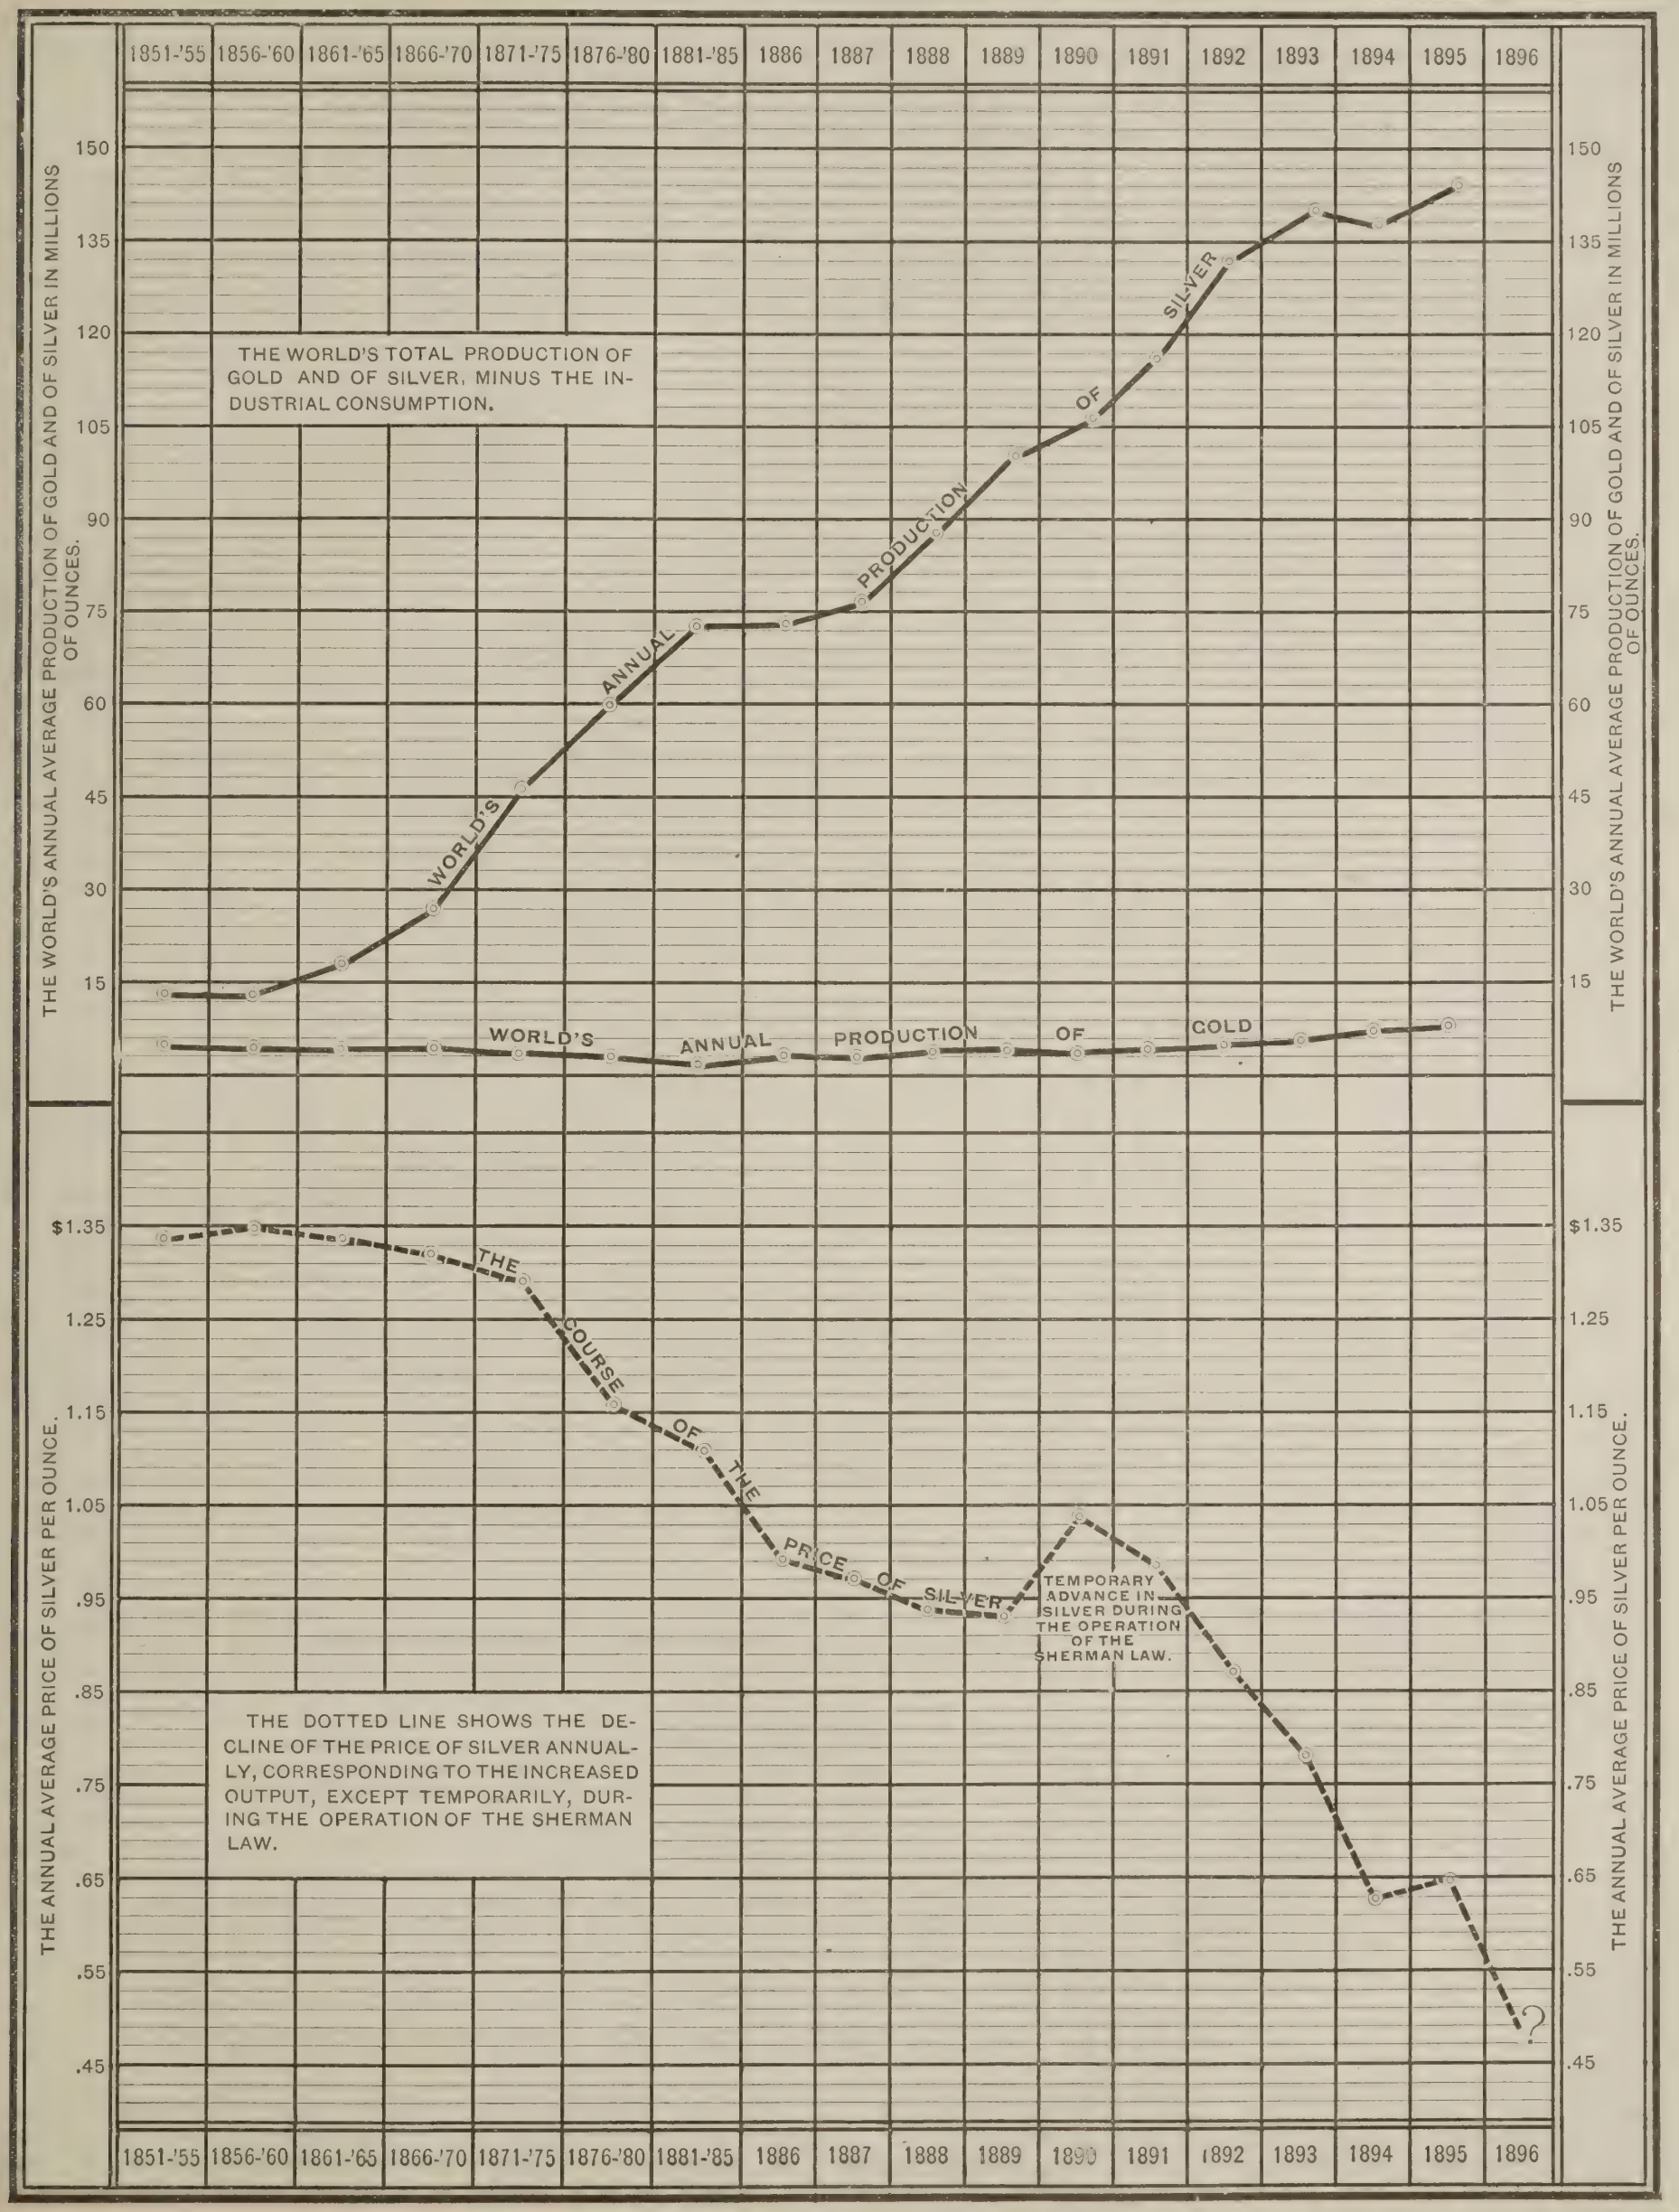
The enlarged graphic chart presented on the opposite page is reprinted from BRADSTREET'S of July 18. It makes plain the reason why the price of silver has declined so sharply.

The price has gone down almost exactly as the world's total production (less the quantity used in the industrial arts) has increased. The total annual output, less what is used in the industrial arts, is, of course, the quantity available for coinage, and has proved, and still is, far in excess of what is needed in that direction. It is important to note that the dotted line, representing the price of silver, declined in almost exact correspondence with the ascent of the line representing the total annual output of silver throughout the world, after subtracting the quantity used in the industries.

If the production and prices of wheat or corn, or iron or copper, or some other widely distributed commodity were represented in this chart, instead of silver, the decline in prices due to excess production would be promptly appreciated. In any event, we find the world's production of silver (exclusive of that used in the industrial arts) increased nearly elevenfold between 1856 and 1893, since which time the production has still further increased. It is also noticed that the world's production of gold (exclusive of that used in the industrial arts) fell off during the first two-thirds of the forty years referred to, since which time it has steadily increased and is now larger than in any previous year in the period covered.

THE WORLD'S PRODUCTION (MINUS THE INDUSTRIAL CONSUMPTION) OF GOLD AND SILVER, FROM 1851 TO 1893, AND THE PRICE OF SILVER, FROM 1851 TO 1894—BOTH IN ANNUAL AVERAGES.

	—Net annual production of—		*Price of*
Years.	*Gold, ounces.*	*Silver, ounces.*	*silver, cents.*
1851–55	5,595,531	13,805,539	134.0
1856–60	5,513,914	13,740,822	135.0
1861–65	4,806,173	19,279,880	134.1
1866–70	4,946,612	26,162,005	132.9
1871–75	4,073,972	45,564,004	129.4
1876–80	3,823,498	60,159,144	115.5
1881–85	2,859,067	72,428,125	111.2
1886	3,057,014	73,169,000	99.5
1887	3,001,113	75,910,000	97.8
1888	3,170,012	88,506,000	94.0
1889	3,767,996	99,786,000	93.6
1890	3,498,520	105,560,000	104.6
1891	4,017,627	116,416,000	98.8
1892	4,714,950	131,929,921	87.1
1893	5,092,513	139,859,317	78.0
1894	6,237,788	137,750,000	63.4
1895	7,342,386	144,796,000	65.4



The feature in relation to the lines representing, respectively, the world's production of and the course of the price of silver is seen in the tendency of the price to fall as production increased, with one noteworthy exception—in 1890—when, by the operation of the Sherman act, the price of bar silver was artificially forced up for a brief period. Since that time the law of supply and demand has reasserted itself, and the price has declined as the supply has continued excessive. With reference to wheat, or cotton, or corn, or iron, such an illustration would compel the conclusion that the cause of the depression in price was the excessive, the absolutely unparalleled increase in production the world over. But by some strange mental process the advocates of free silver coinage seem to have persuaded themselves that the price of silver is not amenable to the same laws as other commodities.

The total annual net production of gold, i. e., the quantity produced in excess of that used in the arts, shows no such extraordinary output as does silver, and, regarded as a commodity, cannot therefore be shown to have fluctuated in value as silver has, based on the law of demand and supply. It is seen by the line representing the net output of gold that the supply has been more nearly stationary than silver, which has increased elevenfold in excess of the demand for it from the arts.

The law of supply and demand may be temporarily suspended, but it cannot overcome or permanently set aside. Silver was and is cheaper because of excess production, while wheat was cheaper for the same reason, as shown in another article on this page. Our coinage between 1878 and 1893 of fifty times the silver that was coined between 1792 and 1873 failed to stop the decline in the price of that metal, and raised the question of our ability to maintain the gold standard of value, which is used by the most civilized nations, and brought on the panic of 1893, from which we are even now waiting to recover. With the silver spectre banished, confidence will return, investments increase, factories' fires start up, wheels will turn again, and demand revive in all lines.

THE FARMER'S CREDIT.

In an interesting article on the condition of the farming classes, the *American Agriculturist* declares that the pessimists, the ignorant and the calamity shouters who are fond of prating about the poverty of the farming community, and some agricultural journals not conversant with the facts who have assisted in spreading the idea, have done their utmost to destroy the farmer's credit. The journal referred to says that as a matter of fact, while many farmers have been in distress, yet, taking the farming people as a whole, it is safe to say that the farmers have passed through the years of depression better than any other body in the country. To-day, it says, farmers owe less than any other large group of people. Fewer farmers have "failed," commercially speaking, than those in any other business. Some mortgage companies have failed that did an extensive business, especially in the semi-arid region, where agriculture is yet in an experimental stage, but the records of well managed concerns in this line of business, in the central-west and northwest, show that farmers' interest is being promptly met, and the principal of many mortgages reduced or paid in full. The number of farms owned free of debt in the south shows remarkable gains. In the middle and eastern states farmers have maintained their good credit in the face of keen western competition. Contrast this, it adds, with the record of failures among merchants, manufacturers and railroads. The 161 railroads that have gone into receivers' hands in the last three and a half years were mortgaged for twice as much as all the mortgages on all the farms in the United States. Probably the actual loss on investments in railroad mortgages in the past six years has exceeded the amount of all the farm mortgages in the country. The judgment of the journal mentioned is, that taking the country as a whole, 95 per cent. of the loans on farms during the past

twenty-five years have either been paid in full or are to-day worth 100c. on the dollar.

The journal quoted declares its belief that it is its duty to make these truths plain to the masses in other occupations. It suggests that instead of pushing collections among farmers, instead of calling in loans, instead of marking up interest rates, political, industrial and social conditions justify a liberal financial policy with all engaged in agriculture, and that the indications are that in the early future the new beet-sugar industry will offer a most attractive field for the investment of the people's savings, yielding a fair dividend on capital, besides (what is more important to general prosperity) distributing among our farmers and laborers the $100,000,000 now sent abroad annually for imported sugar. Its heart, it declares, is stirred with sympathy for such farmers as are really afflicted, but it says that their ills are not to be cured by lying about other farmers or by loudly declaring that all farmers are bankrupt. Without in the slightest degree trying to cover up any of the evils of agricultural depression, it enters a solemn protest against the great wrong that has been done the farmers by the irrepressible calamity howler. It solemnly maintains that the farmer's whole history demonstrates his desire and his ability to pay his just debts. Railroad "receivers," corporation wreckers and "trust" promoters have made an unenviable record as repudiators, but the vast majority of farmers have, can or will pay 100c. on the dollar. More capital, it declares, is the crying need of many farmers, and it is to be obtained on reasonable terms by proving the farmers' credit, which, it declares, it alone among agricultural papers has taken pains to defend and maintain.

BOSTON ASKING FOR EQUAL RATES.

Among the questions now before the Interstate Commerce Commission those raised by the petition of the New York Produce Exchange, in which unfair discrimination by the railroads against New York and in favor of other seaboard cities is alleged, hold the principal place. This matter has not only attracted great attention here, but in other cities, and is emphasized by the latest statistics of grain shipments from the various ports of the country, showing that, whatever the cause, the effect is certainly adverse to the port of New York.

Other cities, however, have their own grievances of this kind. Evidence of this is afforded by the filing of another petition with the Interstate Commission by a Boston firm of grain and flour merchants, who complain that, as far as Boston is concerned, the railroads discriminate unlawfully between export produce and that intended for local consumption. In this instance the complainant urges that the cost of hauling freight intended for domestic consumption is no greater than that intended for export, and the commission is accordingly asked to order an equalization of domestic and export railroad rates from the west to Boston.

This matter is not a new one. It was raised a number of years ago, and was passed upon by the committee composed of Judge Cooley and Senators Thurman and Washburn, which passed upon the whole question of freight rates from the west to the cities of the Atlantic seaboard. Their decision was that Boston and New York should be accorded equal rates on commodities from the west intended for exportation. This ruling has in a large degree been the means of preserving and building up Boston's export trade, especially in grain. This port being further from the western grain sections, while the railroads leading to it have severe grades to overcome, the increased cost of hauling grain would have been otherwise an obstacle to the development of export trade at Boston. It is the provision in the existing tariffs placing it on an equality with New York that has been instrumental in keeping up its trade in this connection. The application on the part of Boston merchants to which attention is directed has, accordingly, attracted no small share of attention, and surmise in export grain trade circles is concerned with the possible rulings of the commission. Action, if any, on the part of the latter will probably be too late to influence the movement of the present crops through New York, Boston and other ports. It is, however, interesting to note the records of Boston and New York respectively as shown by the report of the Bureau of Statistics for September and for the nine months ending September 30. According to this showing the wheat exports from the port of New York for the month in question were 1,610,585 bushels, against 2,721,965 bushels in the same month of 1895. For the twelve months ending September 30 New York wheat shipments aggregated, this year, about 12,972,000 bushels, as compared with 14,054,000 bushels in the same period of 1895. On the other hand, Boston sent abroad in the month of September 967,000 bushels of wheat, against 559,000 bushels in the same month of 1895, and its total wheat shipments for nine months of the current year were 4,191,000 bushels, in comparison with 3,564,000 bushels of wheat for the same portion of 1895. On this showing Boston has gained, while New York has fallen behind, indicating that the competition from which New York suffers is to the northward as well as to the south.

THE BEET-SUGAR INDUSTRY AND ITS PROSPECTS.

To the Editor of BRADSTREET'S:

SIR—Quite a boom in the American beet-sugar industry is on at the present time. It is caused by the results of six years' experience of the beet-sugar factories established under the McKinley law, though one of these plants (at Watsonville, Cal.) was begun several years before, and has since been greatly enlarged, while the Alvarado, Cal., factory struggled along for a dozen years or more before 1890. Claus Spreckels will pay out about $750,000 for the 120,000 tons of beets he will convert into sugar at the Watsonville factory this year, and for the labor this involves. It is understood that the Watsonville plant paid no net profit until its fourth year, but it is a handsome dividend-payer now. The Alvarado mill, the only one of several beet-sugar factories started fifteen or twenty years ago that is still in operation, will work up about 60,000 tons of beets this season. The Chino Valley Beet Sugar Company, at Chino, San Bernardino county, will slice about 90,000 tons of beets during the present campaign; it is a superb plant, and made over 10,000 tons of refined sugar last year from 83,000 tons of beets, consuming 80,000 barrels of oil under its 2,400 horse-power boilers. Both the latter factories are now earning good dividends.

In Utah, the large factory at Lehi City, with its appurtenances and 1,000 acres of land, built in 1890–91, is equipped throughout with American machinery. It represents an investment of $700,000, all local capital, and will this season convert 45,000 tons of beets into 9,000,000 pounds of granulated sugar. It made money last year, and will show a profit this season. Next east is the new factory at Eddy, in the Pecos valley of New Mexico, which is about to begin making sugar from crops grown under favorable conditions. Its plant is from the failed enterprise at Berthierville, Quebec.

Nebraska has two beet-sugar plants, one at Grand Island, the other at Norfolk, at which about 75,000 tons of beets will yield some 15,000,000 pounds of refined sugar this season. Last year these two concerns milled 55,000 tons and got 8,500,000 pounds of sugar, and showed a profit for the first time, and will pay a fair return on the investment this season. A small factory was operated for several years at Staunton, Va., until it burned eighteen months since; enough was done to warrant the opinion that "the middle south possesses advantages for the beet-sugar industry surpassed only by southern California," but with nearness to market to offset that favored region. The Wisconsin Beet Sugar Company, after vexatious delays, is hurrying forward its factory at Menomonee Falls, and hopes to turn out sugar by December. Meanwhile the farmers are ensiloing their beets, having made contracts to grow 2,500 acres of beets annually for ten years. The factory is being equipped throughout with American-built machinery.

During the past ten years sugar beets have been grown repeatedly in a great many places in about all the states and territories west of New England and north of the thirty-fifth parallel, in all sorts of soil and climate. Thousands of analyses of beets have been made by the United States Department of Agriculture and by the various experiment stations. In some states the experiment stations have done a remarkably comprehensive work along these lines, notably in New York, Indiana, Wisconsin, Iowa, Minnesota, the Dakotas, Nebraska, Wyoming, Washington, Colorado, Utah and California. Over much of this vast area, including also Kentucky, Tennessee, the Virginias, and probably North Carolina, it has been conclusively shown that beets of proper quality can be grown in profitable quantities sufficient to fully supply any number of well-located sugar factories—that is to say, ten to twenty tons per acre of beets containing 12 to 18 per cent. or more of sugar, with an average coefficient of purity of 80 per cent. or above that.

Arrangements are under way for a large expansion of the beet-sugar industry. Mr. Claus Spreckels has ordered the outfit for a mammoth mill in the Salinas valley, Monterey county, California, for which he required a guarantee that at least 22,500 acres of beets would be grown annually for five years, indicating a plant with a capacity of upward of 300,000 tons of beets. Mr. Spreckels declares, as a result of his experience with beets in the Golden State and with his monopoly of the cane-sugar industry of Hawaii: "I may not live to see the day, but younger men will see that in ten years the beet-sugar industry will be the greatest industry in California, and California will be the greatest sugar-producing state in the Union. It is the only profitable thing left for the farmer. He can't get into it too soon."

At least three other beet-sugar factories for California are so far projected as to appear almost assured; one of these, to be not far from Los Angeles, is to be built by a Montana "mining king," who evidently agrees with *American Agriculturist's* contention that "protected sugar is a better proposition than free silver." The Pecos valley people assert their willingness to put $1,000,000 into sugar factories in that locality. A plant at Bowling Green, Ky., and one at Evansville, Ind., are in prospect. Wisconsin has one factory quite definitely assured. Central New York capitalists have an option on the only beet-sugar factory in Canada—at Farnham, Quebec—which it is proposed to establish in the Mohawk valley. Any number of factory propositions are in embryo, and many enterprising towns all over the country are planning to push for a beet-sugar factory.

Much depends upon state and national legislation. McKinley's election will be taken as insurance of reasonable protection against foreign competition, and will be followed by the rapid development of the industry. Even if Bryan is elected, it is possible the development may not be wholly arrested, at least in California. Under favorable conditions, Wisconsin and Iowa will follow Nebraska in offering a bounty (payable to the beet growers) on all sugar produced from beets raised within the state. New York and Minnesota are likely to do as much; perhaps other states also. Nebraska now pays ⅝c. per pound, equal to about $1 on the ton of beets. Utah paid 1c. per pound during the first two years of the Lehi factory.

Europe, especially Germany, has developed her beet-sugar industry by an elaborate system of protection against foreign competion, internal taxation to encourage beet planters and sugar manufacturers, and substantial rebates and bounties upon all sugars exported. Europe is not content with shipping to this country eighty times as much sugar now as fifteen years ago, but to still further monopolize the American market, Germany has just increased her export bounty, and France is likely to do the same. Those nations are willing to go to almost any extreme to discourage the sugar industry in this country, so as to preserve for themselves the American market—the greatest market for sugar in the world.

Moreover, it usually takes two to four years for a beet-sugar factory to get well established, because of small supplies of beets until farmers have learned how to grow them. This has been the experience of all our now successful factories. But when the art is once acquired farmers find beets at $4 to $6 per ton one of the most profitable crops, paying $10 to $25 per acre net profit above all expenses of production. (Corn and wheat hardly pay cost of production, let alone profit. An acre of corn, forty bushels at 30c., will buy 200 pounds of sugar; it will produce 2,000 to 3,000 pounds of sugar in beets.) A dozen or twenty years ago the beet-sugar factories at Portland, Me.; Franklin, Mass., and Wilmington, Del., failed because they couldn't get beets. At that time other crops were more profitable, farmers were not interested as at present, and they had no successful experience in this country to profit by. The immense investment required for a beet-sugar factory is idle about two-thirds of the year; this has to be insured against also.

This nation paid $70,000,000 for imported sugar in 1879. In 1894 our sugar imports cost us nearly $125,000,000. We consume two and three times as much sugar per capita

(65 pounds) as Europe. The total quantity used is, therefore, certain to enormously increase from year to year. The world's supply of sugar now comes more largely from beets than from cane. The United States produces about 300,000 tons of sugar in a favorable season now, one-half more than a decade ago, but our annual imports are approaching the 2,000,000-ton mark.

Beets are a comparatively sure crop and yield more sugar per acre than does cane in Louisiana. The books of one of the best equipped Louisiana plantations and sugar factories, compared with the records of the Chino beet-sugar enterprise for five years past, prove the latter to be the better proposition. But there is plenty of room for both sugar cane (within its limited environment) and the sugar beet (on its broader field) until the United States produces all the sugar it consumes. To do this will require at least 750 more factories, several million acres of land (crop rotation is necessary), a vast amount of labor, an immense investment of capital. It will mean large business for our machine shops, enormous annual tonnage for railroads, wealth and prosperity for farmers, putting into the pockets of American farmers, laborers and capitalists the $100,000,000 now paid out each year for imported sugar.

In view of the probability that a number of beet sugar enterprises will be offered to investors, certain points are important:

First. The factory must be assured of a certain supply of beets of good quality. Even if pledges of an abundance of beets are forthcoming, they are of little value unless it has been determined by actual experiment upon the lands in question that they will produce beets of proper quality as well as quantity. At least two or three years' tests are usually necessary to determine this beyond a doubt. Fortunately, such tests have been made already in a large number of places. Too much stress cannot be laid on getting plenty of rich beets.

Second. The beets should be grown as near the factory as possible; a haul of fifty to a hundred miles absorbs much of the profit on the crop. There should be sufficient beet land available within reasonable distance to furnish the desired quantity of beets when only one-third of such land is sown to beets, thus permitting a wise rotation of crops. Beets can be grown year after year on the same land, but it is not good agricultural practice.

Third. A successful factory requires an almost unlimited supply of pure water, good and cheap lime, also fuel, while facilities for getting the sugar to market are important.

Fourth. The best talent and the best machinery are the cheapest in starting or operating a sugar factory.

These and other points properly looked after by experts, and over-capitalization avoided, a beet sugar factory, with good business management, under appropriate national and state encouragement during the first few years, will prove a safe and profitable investment.

HERBERT MYRICK.

Springfield, Mass., October 16.

GRAND TRUNK LOOKING UP.

The half-yearly report of the Grand Trunk Railway of Canada, covering the operations of the system for the six months ending June 30, 1896, was lately made public. The summary of the same is contained in the last issues of the London financial papers that have come to hand, and have, apparently, produced a favorable impression. At any rate, the comments upon the document are much more satisfactory in tone than was the rule before the change of management and the adoption of a new policy in the working of the corporation was adopted.

Reports have, indeed, been published to the effect that Sir Charles Rivers Wilson, the president of the company, contemplated resigning his post, but though the meeting of the stockholders took place last week, no such action was taken. In view of the work that the new president has performed in connection with the company, his loss would certainly be a serious one at this stage, and it may also be observed that his services in bringing the Grand Trunk into closer and more harmonious working with the American trunk line systems and his coöperation with the Joint Traffic Association would make such a step on his part a matter for sincere regret.

The accounts now at hand in regard to the report itself are perhaps too meager for any detailed analysis. It is hardly needful to observe that the six months covered by the figures are the lean half of the year, and they must, therefore, be considered in the light of this fact. The net earnings of the main line and the branch system directly controlled fall short of meeting fixed charges and rentals by the sum of £82,000, or say $400,000. The present condition of traffic, it is true, would indicate that the results of the current six months are likely to be better; that is, provided rates are maintained. The idea advanced in the English financial press in commenting on the matter, namely, that the year 1896, as a whole, is likely to add seriously to the deficits of the two preceding years, may, therefore, have to be considerably modified when the actual results are known. But even taking the worst side of the prospect, the London *Statist*, which in the past has been a very severe critic of the Grand Trunk and its management, finds opportunity to make the following encouraging comments on the company's position: "Many stockholders are professing nervousness as to how the company is to proceed for the future with its accumulation of deficits hanging over it, and in all probability at the forthcoming meeting, on Wednesday next, something may be said on the subject from the stockholders' side of the table. But, of course, it has to be recognized that the past has been one of very adverse times. Those people who urge immediate drastic dealing with the situation as at present, must not commit the error of pressing the directors into a corner. The new era of management has not been of sufficient duration to give much evidence of what may be found practicable in economical working, Mr. Hays, the new general manager, having only taken office as from January 1 last, but already something has been done to improve the situation. * * * High hopes are entertained that economies will be effected in working, and, with better times, a simultaneous expansion of gross receipts and reduction of working cost may put a much better complexion on affairs."

In connection with the improvements inaugurated by the new management it is stated that one of its first steps was to order a large number of new freight cars of the heaviest capacity, and the effect of this, with other improved facilities for handling business, is reflected in the substantial gain in freight earnings for the half year under consideration. The receipts from merchandise traffic, indeed, amount for the six months to £1,140,000, against £1,088,000 in the corresponding period of last year, a gain of at least $250,000.

In considering the future of the Grand Trunk, the same authority from which the above quotation was drawn makes the following suggestions: "It would look as if the soundest policy will be to let matters remain in much the present shape, and if and when the time comes that deficits are replaced by surpluses, then will be the time to consider how to deal with the accumulation of past deficits. In view of the magnitude of the sum that has to be cleared away, it may be even expedient to do in regard to the Grand Trunk of Canada Company what has been done by other companies—that is, fund the amount of deficit accumulations, for if that step is resorted to it will not add to the charges of the company, inasmuch as the money borrowed to meet deficits bears a charge for interest, we should imagine about the same as the charge would be if the aggregate deficits were funded at a rate of interest of about 4 per cent. While in respect of the past we feel that a step of this character would be the best policy for the company to adopt, future inquiry might, we think, be usefully instituted as to whether some other arrangement than that now in force with regard to the controlled lines with traffic guarantees might not be formulated."

THE WAR DEPARTMENT REPORT.

A considerable portion of Secretary Lamont's annual report is devoted to the subject of sea-coast defenses. Of the total requirements for the War Department for the next fiscal year, not far from one-third are credited to fortifications and sea-coast defense. The amount suggested by the Secretary, $15,824,298, will be required to continue the work at its present rate of progress, which has been appreciably advanced under the large appropriation which became available at the beginning of the fiscal year. It is learned from the Secretary's report that while on July 1, 1893, but one modern gun had been placed in position, on July 1, 1897, defenses will have been completed with thirteen 12-inch, thirty-seven 10-inch, eight 8-inch, and four rapid-fire guns, together with eighty 12-inch mortars.

In his report the Secretary repeats his suggestion of enlarging the enlisted strength of the army and making an addition also to the number of officers. Advance accounts of the contents of the report have it that the plan which the Secretary will advocate is that of adding two foot batteries to each artillery regiment, and two companies to each infantry regiment. This plan would furnish fifty new companies and ten new batteries, and would accomplish the double purpose of giving the infantry the three-battalion organization, which is generally regarded as tactically the best, and of increasing the force of gunners, as the new coast armaments require.

It is understood that the cavalry will not be increased, inasmuch as the decline of Indian hostilities has left its present force adequate for ordinary needs. As regards the infantry, the suggestion has been made that a reduction in the number of regiments would furnish three battalions of four companies each without adding more men, and it has also been proposed to secure the three-battalion organization without an increase of enlisted strength by having the third battalion of each regiment a skeleton or unmanned organization, its officers consisting of those who are detailed to various duties away from their regiments, the idea being that in time of war the third battalion could be recruited. Secretary Lamont, however, is understood to be in favor of a little increase in the enlisted strength of the army whatever plan of organization may be adopted. The suggestion has been made in reference to the artillery that the number of regiments of this arm should be increased from five to seven, a plan which would involve the addition of twenty-four batteries. Secretary Lamont's plan is different, proposing the addition of ten batteries and avoiding the expense of additional regimental officers. The increases proposed by him call for 15 majors, 140 captains and 15 lieutenants, besides 3,591 enlisted men. The annual increase in the pay of officers is estimated at $200,000, and in that of soldiers at $1,200,000, a total of $1,400,000. Secretary Lamont believes that there will be a great gain in efficiency, and at a comparatively small cost. He estimates that the gain in efficiency will be 20 per cent., in members about 16½ per cent., and in cost only about 6 per cent. In all likelihood, the increases proposed will be acceded to by Congress, if not in the terms suggested by the Secretary, at present, owing to political complications, then substantially in the future, when existing conditions shall have passed away.

THE NEW WESTERN RAILROAD ASSOCIATION.

All reports from the west indicate that the grain-carrying railroads are at present more troubled about providing facilities for transporting the enormous volume of tonnage that is offered than about rates. The high prices for wheat have brought it to market with a rush, and corn is also moving freely. It is, indeed, pointed out that, owing to the general storing of the crop of 1895, the corn-carrying roads have two crops instead of one to move during the present season. In spite of the political uncertainty and its restricting effect upon speculation the market values of the stocks of the granger roads reflect these conditions to a considerable extent by their strength and advancing tendencies. The considerations already referred to are reinforced by reports that on many of the lines west of Chicago there is an absolute car famine, the rolling stocks being inadequate to provide accommodation for the traffic offered, while at several junction and terminal points blockades have occurred owing to the enormous number of cars and trains that have to be moved and provided for.

Under such conditions rate cutting naturally disappears. Indeed, at this juncture the western railroad men are anxious to keep rates up and get the best possible results from their augmented traffic. It is known that the pacific spirit manifested by the presidents of the granger roads and by their subordinates at the recent conference in Chicago has borne fruit, and it was stated some days ago that an informal but satisfactory agreement had been entered into by the executive officials of some of the leading roads in that section with a view to regulating competition and preventing friction as to rates. It is, however, now announced that a committee of seven to which the task of formulating a new formal agreement to replace that of the old Western Freight Association had been confided, had completed its labor, the

result being a plan which met with approbation of all concerned. The favorable traffic conditions that now exist have, of course, tended to accelerate the matter, and it is understood that the new organization will go into effect by November 1 at furthest.

The Chicago dispatches in reference to the matter state that in its main features the new Western Association will follow provisions of the Joint Traffic Association agreement of the eastern trunk lines, though it will be improved in some respects and adapted to the different conditions which exist in connection with railroad traffic in the west. Provision is made for a board of administration with power to make new or to change old rates. While the Joint Traffic Association and the Southwestern Association have one member from each road in the governing board, the new western organization will have only three or five men employed to fix and enforce rates. Another important feature is that this governing board shall be continuously on duty. There will also be an executive board, the unanimous action of which shall be required on any proposition. The headquarters of the board of administration are to be in Chicago, and it shall meet daily. It shall have full authority over all agencies and shall secure for each road a fair share of competitive traffic; no road shall deviate from or change rates, or any of the rules or regulations fixed by the association, unless by resolution of the company's board of directors, and then these changes shall not be effective until thirty days after such resolution is passed. There will be a fixed sum of money on deposit as a penalty for violations of the rule. The commissioner who keeps the records shall decide all questions until they are acted upon by the board of administration or the executive board. This, it will be seen, is a considerable advance on anything yet attempted in this direction by the western railroads. The fact that the board of directors are made responsible for changes of rates, and that cutting of tariffs will be surrounded with a good deal of formality, is a step in the right direction and a curb upon the independence of the minor officials, whose abuse of the power of initiative has been a prolific source of rate wars in the west. How far the new organization is intended to stop underhand and illegal methods of cutting rates or favoring certain shippers is not stated, but recent revelations before the United States Interstate Commerce Commission would indicate that this phase of the matter must be taken in hand by the railroads themselves before there can be any stable conditions in regard to railroad competition at the west.

THE METRIC SYSTEM BEFORE THE BRITISH ASSOCIATION.

Among the topics discussed before the mathematical section of the British Association for the Advancement of Science was one that had a special interest to a large number of people besides the scientific class strictly so called. Reference is made to the metric system, a discussion upon which was begun by a paper on metric measures and the old system, which was prepared by Mr. Frederick Toms, of London, and read before the section by a friend. This paper took the ground that the metric system of weights and measures would doubtless be legalized in Great Britain before long, but that, admirable as this system was for scientific purposes and large commercial transactions, the decimal divisions were not well adapted to the small dealings which prevailed among the less educated portion of the community, who formed the great mass of the British nation. In legalizing the new code, however, there was no need to sweep away the method now in force, as the two systems might be combined, and the retention of old forms would make the untaught population familiar with new principles. The English measures might be made to accord with the French by dividing the meter into eleven equal parts, and taking ten of those parts as the basis of the English yard. The divisions and multiples of the old system could be retained as heretofore, the only difference being that inches, feet, yards, furlongs, etc., would all be reduced by a small fraction (.006). This done, the meters would be exactly converted into yards when multiplied by 1.1, and yards would be converted into meters when divided by 1.1. At the same time the complications of the present English land measures would be simplified. A somewhat similar course might be taken with weights and measures of capacity, old names being applied to new equivalents. If half a kilogram be taken as the new pound, and half a dekaliter as the new gallon, their divisions and multiples would follow the same course as that now in vogue, and retain the same nomenclature.

One of those who engaged in the discussion alluded to the inconsistencies of the existing duodecimal system, and asserted that the metric system could be taught to school children in a few hours; that there was no reason why grown-up people could not master it just as easily, and that the use of the metric system would unquestionably sweep away an enormous amount of unnecessary drudgery in the teaching of arithmetic. Another speaker said that the difficulty with regard to the introduction of the system would be that of being able to think in it, and that an approximation to the metric system would only complicate matters. Some attention was attracted by an address of Sir Frederick Bramwell in criticism of the proposal to adopt the metric system. He said that so far as he could make out the principal reason assigned for the adoption of the metric system in the interests of commerce was that the other nations employed it. He desired to suggest that if a particular person found himself at a particular disadvantage, the way to put himself right was to attend to his own business without—unless it was absolutely impossible to avoid it—inconveniencing everybody else. It did not appear too much to ask the merchant or manufacturer to make out his invoices and price lists on the metric system, and in that way give the customers he wished to attract all the information they required. Why should he not? Was he too lazy, or didn't he believe in it? If he stood alone, was that a sufficient reason for encumbering the whole nation in all their daily transactions with the metric system? It was said that all that had to be learned was a unit, and that one went upwards by tens and downwards by tens. But the first Napoleon said the human mind could not deal with it in that way, and that when one got to a certain number of figures a new "platform" was required.

For purposes of memory, Sir Frederick said, Napoleon was right. The users of the metric system had found that out. In theory people should write 0.001 for a millimeter; but, instead of doing so, they wrote the figure 1 and the letters mm. over it. Then, again, how was a thousand kilos. dealt with in commerce? It was called a ton. On placards all over Paris they saw half-kilos., not 500 grammes. The fact was the French did not really adopt the system they professed to adopt. Lord Kelvin said the other day that the adoption of the metric system did not necessarily preclude vulgar fractions, but that was a concession only made in recent years. It appeared to him (Sir Frederick) that if we were to be allowed to say half meter, quarter meter, one-third meter, and so on, we might just as well retain our present system.

Touching upon the difficulty experienced in making the metric system obligatory in France, the speaker said that it was intended that it should be obligatory in two or three years, but it did not come into universal use for thirty years. The French were now committed to that complex (as he thought) system of arithmetic. He, as a civil engineer, laid great value on facility for mental calculation, and in that direction, he declared, the metric system was absolutely prohibitory, unless they had men of the wonderful capacity of the late Mr. Bidder, Q. C. A man with an ordinary memory could not do mental arithmetic decimally. He would, as an example, ask them to square 3.25 mentally. He did not think they would like to do it, but they could square 3¼ with comparative ease. He related instances of the difficulties French engineers had experienced in making elaborate calculations in decimals. He had worked the same problems in vulgar fractions, and surprised his companions by the rapidity with which he had arrived at the result. Even French railway booking clerks and bank clerks, he said, found the decimal system complex. He was prepared to maintain that, in point of ease of calculation and in point of mental arithmetic, the ordinary English weights and measures and vulgar fractions would enable any person of ordinary intelligence to do his work more accurately and speedily than decimals, and still more than decimals plus the metric system. Sir Frederick said that he knew he was looked upon as a heretic, calling attention to the fact, which it may be as well to note, that his critical spirit in relation to the metric system does not represent the general attitude of men of science.

WESTERN UNION'S SHOWING.

It has been remarked in previous years that the figures exhibited by the country's principal telegraphic organization are not among the least valuable indications of the condition of trade for a given period. The annual report of the Western Union Telegraph Company for the twelve months ending June 30, 1896, which has been out for some days, may, therefore, be examined with a great deal of interest. It is true that the results cover a period during which general business was more favorable than it has been since the first of July, but, at the same time, the comparison involves consideration of a number of circumstances calculated to exert an influence on the operations of telegraphic systems, and in this light the showing is of more than ordinary interest. Compared with the preceding two years the receipts and expenditures of the company for the twelve months covered by the report are as follows:

Year ending June 30.	1896.	1895.	1894.
Gross earnings	$22,612,736	$23,218,019	$21,852,655
Operating expenses	16,714,756	16,076,629	16,060,170
Net earnings	$5,897,980	$6,141,389	$5,792,485
Interest and sinking funds	933,957	933,812	931,607
Balance	$4,964,023	$5,207,577	$4,860 878
Dividends	4,767,805	4,767,733	4,740,073
Surplus	$196,218	$439,844	$120,815

As contrasted with 1895, the gross revenue of the company increased $394,717. The increase in expenses was $638,120, the most important items being the augmented outlay for operating and general expenses of $344,239, and the augmentation of maintenance and construction by no less than $237,623. The great storm at St. Louis and other storms are said to have occasioned considerable expense to the company for repairs and reconstruction of wrecked lines, but it is, nevertheless, also stated that the principal cause for the rise in the total expenses grows out of the large number of new offices and the greater number of full-paid messages handled. This is shown in the statistics of operations, which for the year under consideration compare as follows with those of the three preceding years:

	1896.	1895.	1894.	1893.
Miles wire	826,929	802,651	790,792	769,201
Offices	21,725	21,360	21,166	21,078
Messages sent	58,760,444	58,307,715	58,632,237	66,591,855
Av. toll per mess	30.9c.	30.7c.	30.5c.	31.2c.
Av. cost per mess	24.c.	23.3c.	23.3c.	22.7c.

During the year 264 miles of poles, 24,278 miles of wires and 365 new offices were added to the system. The increase in messages handled over the company's traffic in 1895 was 453,129, but the company, it would seem, really transmitted 920,000 more full-paid messages on account of a decrease in the press and government messages. The decrease in press messages was due to special causes. Not only was the depression of general business effective in this connection, but an increased amount of such telegraphic traffic has been transferred to wires leased from the company, which fact has an influence upon the total amount of messages handled. It may be noticed that in spite of the increase over the preceding year the number of messages sent still falls short by some 7,800,000 of those which were transmitted on the Western Union's lines in 1893, which diminution, though partially attributable to the bad times that have intervened, would also seem to point to factors such as are referred to in the report regarding the increased use of private wires. It may also be noted here that in the year ending June 30, 1893, the company's gross earnings were no less than $24,978,000, its net $7,496,047, and the surplus over the dividends on stock $1,930,841.

Considering all the circumstances with which the Western Union, in common with other large business corporations, had to contend during the year covered by the report, the results on which comment is made are far from unfavorable. In fact, it is a matter for favorable notice that the organization did so well and was able, as is stated in the body of the report, to expend $734,418 on the acquisition of new property. The policy of using copper wire for all reconstruction of trunk lines has been continued with excellent results. The company's capital remains unchanged at $95,370,000, and the bonded debt is $15,275,208, a slightly decreased figure from the preceding year. No reference is made in the report to the change now in progress relative to the Western Union's relations to the telephone system in New York and its vicinity, that being a matter which, though important in its general bearings, would be deferred for treatment in the report for the current fiscal year of the company.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.
[East of Rocky Mountains.]

Bush. week end'g	1896.	1895.	1894.	1893.

An organization was effected this week by delegates representing the various civil service associations of the country, who met in convention at Washington. They issued a declaration in which they say that employees of the classified service are in law and in fact employees of the government, and do not by reason of their employment owe duty to any political party nor to any political leaders, are in no sense the private employee of any officer of the government, and have not surrendered their citizenship. The beneficial effect of the civil service law is declared to be found in the limitation of the executive power of appointment. In touching on the provisions of the law which affect removals, which require removal for interfering with or attempting to control elections, or for coercing an employee in his religious or political action, and which prohibit removals because of the religious or political opinions of employees, the association declares that it is aware of no affirmative provision of law which prohibits the removal of employees without cause. It further declares that to remove the service from the influence of partisan politics it is absolutely essential to limit the power to remove employees, so that they shall be removable only for stated causes, and that the truth of such statements shall be subject to investigation; and that while it does not seek to impose upon the government or retain in office an unsuitable employee, yet it insists that when a citizen has complied with all the requirements of law as to examinations and other modes of qualification and has been appointed, there should be a further provision to retain him in his position, not only in fairness to him, but in justice to the government, which has been at much expense to procure him.

Secretary Olney has issued an important order abolishing many fees against the exaction of which protests have been made by foreign shippers and domestic importers. The order cuts down the emoluments of many consular offices hitherto regarded as desirable posts, particularly in Great Britain. It provides that no oath shall be required for the verification of invoices of merchandise on the free list or subject to specific duty only, and that the verification by oath of invoices of merchandise subject expressly or in effect to ad valorem duties may be required when the consular officer to whom the invoices are presented has reasonable ground to suspect fraudulent undervaluation or other willful misstatements therein, but shall not be required in any other case. Under this section any oath may be taken by a commissioner or such other officers as are permitted by law. Another provision prohibits consular officers from receiving the whole or any part of the fees charged by a commissioner or other officer for administering oaths to invoices; from receiving anything as a gratuity or otherwise on account of the administration of such oaths, and from being in any way, either directly or indirectly, pecuniarily interested in such fees. These regulations, which take effect at once, are expected to effect a great reform in the service and correct many abuses which have been alleged to exist. It is understood that the Treasury Department has been engaged in an effort for a long time to do away with the tax upon foreign shippers and American importers upon free list or specific duty articles in invoices, but could find no relief except through statutory enactment until the attention of the State Department was called to the matter. The third paragraph of the new regulations is designed to destroy the incentive to the excessive fee system that has grown up, and to do away with a system which was never contemplated under the law governing the compensation of government officers.

According to the report of the director of the government Bureau of Engraving and Printing the production of securities in sheets during the fiscal year was as follows: United States notes, bonds and certificates, 14,130,819; national currency, 2,053,396; internal revenue stamps, 36,044,732; customs stamps, 214,000; postage stamps, 30,647,771; checks, etc., 1,959,877, making a total of 85,050,595, at a cost of $1,469,359, or $17.27 per thousand sheets, as compared with $20.30 for the year 1895, $23.73 for the year 1894 and $25.35 for the year 1893. The average amount of work done by each employee is shown to have largely increased during the same time, the total amount being over 36,000,000 sheets in excess of 1893. During the year postage stamps were delivered to postmasters in the following amounts: Ordinary stamps, 3,025,481,467; special delivery, 4,466,270; postage due stamps, 19,348,714; newspaper, etc., 5,505,672; total number, 3,054,802,123. A saving for the year 1896 is shown of $25,124 in the cost of the production of postage stamps. On the subject of the new issue of silver certificates, the director says they have met with universal commendation by the public. These notes, he says, have demonstrated the possibility of fine art being utilized to advantage in the production of bank notes, and will result in the most perfect security against counterfeiting.

It is interesting to note that the appropriations for pensions for the last fiscal year were more than sufficient to meet the expenditures. The amount appropriated was $140,000,000 and there was at the close of the year an unexpended balance of about $1,790,000 according to the annual report of Commissioner Murphy. During the year 40,374 new pensioners were added; 3,873 restored who had been previously dropped, making a total of 44,247; the losses for various reasons aggregated 44,093. The whole number of pensioners on the rolls June 30, 1896, was 970,678. The commissioner states that it may now safely be assumed that the roll from this time on will show a steady diminution unless Congress should enact still more liberal provisions. The rate of mortality of the pensioners, particularly those who served through the War of the Rebellion, is rapidly increasing. Disallowances of pensions during the year amounted to 97,280, most of them being applications for increases. The amount disbursed was $138,214,000, a decrease of $1,592,000. It is intended to detail experts to visit and instruct the 1,285 boards in the country as to uniformity of examination, in the construction of medical certificates and to prevent errows in rating. The act of January 5, 1893, increasing pensions from $8 to $12 of certain Mexican veterans, whose names were then on the roll, the commissioner says, does not make any provision for the pensions of others whose names might be subsequently recorded, and he recommends that the $12 increase be granted to all Mexican survivors who are totally disabled and in destitute circumstances. The commissioner also calls attention to the fact that there is no statute providing a pension to the widows of officers or soldiers who died from causes originating in the service prior to March 4, 1861, during a time of peace. This, he thinks, is an inequality in the law which should be remedied by congressional action.

The British Post Office Savings Bank lately completed thirty-five years of existence, and a summary of the results reached is given in the *Pall Mall Gazette*, which ten years ago gave an account of the progress of the system for the quarter century completed in 1886. The journal in question showed that, beginning in a very modest way, only 435 deposits, amounting to £951, having been received on September 16, 1861, the first day on which business was transacted, there were during 1885 6,474,484 deposits, amounting to £15,034,694, and on December 31 of that year the sum of £47,697,838 was standing to the credit of 3,535,650 depositors, in addition to which 30,597 depositors held government stock of the nominal value of £2,452,252. These figures bore ample testimony to the thrifty habits of a considerable proportion of the inhabitants of the United Kingdom, and to the facilities for saving afforded by the post office. But the ten succeeding years have given even more striking results. During 1895 there were 11,384,977 deposits, amounting to £32,078,660, or more than double the amount received in 1885, and on December 31 last £97,868,975 stood to the credit of 6,453,597 depositors, while on the same date 68,949 depositors held £6,949,948 government stock. In ten years, therefore, the number of depositors had nearly doubled, and the amount to their credit had more than doubled; the number of stockholders had increased 125 per cent., and the stock held by them 183 per cent. In 1885 the amount due to individual depositors averaged £14 5d., and the holding of each stockholder was £50 2s. 9d. In 1895 the average balance due to individual depositors had risen to £15 3s. 4d., and the average of each holding of stock to £100 16s. In thirty-five years, or, to be quite accurate, in rather more than thirty-four years and a quarter, there have been 163,601,652 deposits and 57,308,157 withdrawals; the amount received, exclusive of interest allowed to depositors, has been £445,005,805, and the amount withdrawn £347,136,830.

The journal quoted says that, to some extent, the enormous increase of business in recent years may be ascribed to the operation of the Savings Bank act of 1893, which raised the annual limit of ordinary deposits from £30 to £50, and the limits of stock investments from £100 to £200 in one year, and from £300 to £500 in all. The low level of the bank rate and the consequent reduction in the interest allowed by bankers on deposits have no doubt induced many persons to invest money in the Post Office Savings Bank, where they receive 2½ per cent. on their savings. Making every allowance, however, for the additional business due to these causes, and to the closing of several of the older savings banks, the growth of the Post Office Savings Bank must be regarded as an indication of continued national prosperity and of the development of thrift, especially when taken in conjunction with the fact that £45,000,000 is deposited in the trustee banks. Some persons regard the holding of so many millions of money by the government as a serious danger, and ordinary bankers are loud in their complaints of the competition of the Post Office Savings Bank, and in a lesser degree of the trustee savings banks.

CURRENT BUSINESS NEWS.

Industrial.

The Redman Manufacturing Company's works at North Kingstown, R. I., whose output is Kentucky yarn, will start up November 1, after a six months' idleness.

The miners employed at the twenty-five mines in Sangamon county, Ill., have struck for an advance in wages.

The Sibley Mill and the King Mill, of Augusta, Ga., employing 1,500 men, have resumed work. The former has been closed down for several weeks, and the latter since July.

Five narrow gauge locomotives are being built for Japan by the Pittsburgh Locomotive and Car Company.

The Welsbach Light Company's factory at Gloucester, Mass., is now running at night to keep up with orders. Shipments in October show an increase of over 40 per cent. from the same period last year.

The new Butler & Pittsburgh road is buying 25 locomotives and 400 cars with which to equip its line. This is the Carnegie road. The Pittsburgh, Shenango & Lake Erie, its northern outlet, it is announced, will also buy new equipment and put down heavier rails.

A Reading, Pa., dispatch states that the rolling mill of S. R. Seyfert & Bros., at Seyfert's Station, Pa., has resumed work after an idleness of two months. The firm put 225 men to work, and will run "double turn."

The Berky & Gay furniture factory at Grand Rapids, Mich., has resumed operations after a prolonged idleness.

The Pennsylvania Railroad shops at Altoona, Pa., one of the largest plants of the kind in this country, have closed down on account of depression in business; 7,000 men are made idle.

The wage difficulty between the Ellis & Lessig Steel & Iron Company, of Pottstown, Pa., and their puddlers, has been settled. The nail factory and sheet mill of the company are also running, and now the entire plant is in operation.

Differences between the management of the E. Morewood Tinplate Works, at Gas City, Ind., and the employees, with the exception of the men in the shearing department, have been settled, and the works have started up with about 200 men.

The Lehigh Valley Coal Company has issued orders to close all operations indefinitely in the No. 1 slope at Janesville, Pa. This order affects 200 men.

The miners employed in several of the larger mines of the Hocking valley, Ohio, have voted to return to work at the reduced wages of 45c. per ton.

According to the Chattanooga *Tradesman* considerable animation characterizes the iron market, but new orders for iron and steel products are not being placed as freely as they would be if manufacturers would accept current quotations for 1897 delivery.

The Chattanooga *Tradesman* is authority for the statement that "the textile industry shows but little change. Cotton mills are running on full time, but the demand and prices are still unsatisfactory and stocks are showing some increase."

The old Berkshire Mills, of Dalton, Mass., have resumed operations after a shutdown of a week for repairs.

A reduction in wages, varying from 5 to 8 per cent., went into effect in the mills of the Salmon Falls Manufacturing Company, located at Salmon Falls, Mass. The management has promised to restore the cut when business improves, and the employees will continue at work.

The Hinsdale Woolen Company, of Pittsfield, Mass., will resume operations in a short time.

Commercial.

A smaller acreage and a decreased rate of yield are resulting in a decidedly smaller crop of potatoes, says the *American Agriculturist*, New York. It says that the amount available for market is by no means as burdensome as was the enormous crop of 1895. The crop now being harvested is placed at 245,480,000 bushels, a decrease of more than 50,000,000 bushels, or 17½ per cent., compared with a year ago. The total area harvested approximates 2,865,000 acres, which in turn is 10½ per cent. short of last year.

Most of the chief farm products share in the advanced prices. Most of these commodities are being exported in enormous quantities.

The unprecedented advance in wheat has affected the flour market. The millers at Buffalo, N. Y., have advanced the price 25c. per barrel, making the wholesale price of the best patents $4.40@$4.75.

The export movement in the cruder forms of southern iron and steel has been checked "for want of ship-room, caused by the fact that ship-room for grain has been engaged as far ahead as July."

There is a great deal of interest being taken among wheat merchants, millers and others in correcting what they regard as overstatements of the probable size of the domestic wheat crop. On this point Beerbohm, London, prints the following from a Liverpool reader: "'Statisticians in previous years had been so blamed for underestimating supplies and overestimating wants that this season they have gone to the opposite extreme. I think that both the Russian and American supplies are overestimated. These countries' crops I think so seriously deficient, compared with last season, that although their present shipments are liberal (American especially) you may see a great falling off later on. * * * Altogether the position is a very strained one, and may result in great excitement later on.' All this may or may not be true; for our part we have, as usual, given what we consider the maximum supplies and the minimum requirements. * * * The position is sufficiently strong to induce buoyant markets, such as we have not witnessed for some years."

It is estimated that the recent epidemic of hog cholera in South Dakota has killed 30 per cent. of the swine in that state. Prices have risen 25 per cent. in consequence.

The flour output at Minneapolis, Duluth, Milwaukee and St. Louis for this week is 537,000 barrels, against 463,000 barrels for the like time last year.

All available grain room in foreign steamers scheduled to sail from Boston between now and the first week in February has been engaged.

About 2,500 men are said to be on the pay-roll of the shipyard at Newport News, Va., and "the force is to be permanently increased by January 1. The fine new steamer Grand Duchess, for the Plant line, which is being completed at the yard, went out on a trial trip last week, which proved entirely successful."

Financial.

The following securities were sold at auction this week in New York:

$225,000 Forest & Sioux City R.R. Co. 1st 6 per cent. gold bonds, $500 each, due July 1, 1915...	$10,000
2 Income bonds, $1,000 each, of the Vicksburg, Shreveport & Pacific R.R. Co.....	40
200 Shares the New York Biscuit Co.....	54
100 Shares the Diamond Match Co.....	100
10 Shares Lawyers' Surety Co.....	99⅛
$1,000 New York, Providence & Boston R.R. 1st mortgage 7 per cent. bond, 1899.....	107⅞
10 Shares Seventeenth Ward Bank of Brooklyn	112
3 Shares New York & New Jersey Telephone Company	123

At the annual meeting of the stockholders of the Metropolitan Traction Company, R. Somers Hayes and A. H. Paget were reëlected to the directorate.

The Lake Erie & Western Railroad Company has declared a dividend of 1¼ per cent. on preferred stock, payable November 14. Books close October 30 and reopen November 16.

A dividend amounting to 10c. per share has been declared on the stock of the Ontario Silver Mining Company, and is payable October 31.

The H. B. Claflin Company has declared the usual quarterly dividend on the preferred stock, payable November 1.

It is officially reported that for the three months of this fiscal year the receipts from internal revenue have been $37,794,887, against $37,744,479 for the corresponding three months of 1895. For September, 1896, the collections from internal revenue were $12,009,130, as against $12,001,956 in September, 1895.

Articles of incorporation for the Union Sugar Refining Company, with the main office at Camden, N. J., have been filed at Trenton. The total amount of stock is $2,000,000, with the shares at $100. Half of the stock is to be preferred, and it will be entitled to receive 8 per cent. dividends. Business will be commenced with $4,000, divided into 40 shares.

From 1873 to 1882 "silver fell more than 18c. an ounce, or 14 per cent., and wheat advanced about 2½c. per bushel, or 2 per cent. During the last ninety days silver fell 4c. an ounce, and wheat, owing to deficient harvests in other countries," advanced about 22c.

The National Starch Manufacturing Company has declared a dividend of 2 per cent. on the first preferred stock, payable November 2.

Sound money literature published by the Cincinnati, Hamilton & Dayton Railway may be obtained by addressing D. G. Edwards, passenger traffic manager of that company.

The Homestake Mining Company has declared dividend No. 219 of 25c. per share ($31,250), making $6,025,000 paid in dividends to date, payable October 26.

The directors of the United States Cable Company have declared an interim dividend at the rate of 2½ per cent. per annum for the quarter ending September 30.

The comptroller of Brooklyn, N. Y., will sell to the highest bidder at noon on Thursday, November 5, $2,115,000 3½ per cent., tax exempt, gold bonds and stock of that city.

In the November *Forum* Professor Taussig, who occupies the chair of economics at Harvard, writes very plain-spokenly about "Bond Sales and the Gold Standard," and Mr. E. W. Codington, a business man of Florida, discusses the money question with great clearness, and suggests a plan for placing our financial system upon a sound basis.

Railroads.

At the annual meeting of the Southern Railway Company, held at Richmond, Va., all officers were reëlected.

The stockholders of the Buffalo, Rochester & Pittsburgh Railroad Company will hold their annual meeting on November 16.

Mr. Samuel Spencer, president of the Southern Railway Company, has been relieved from acting as receiver of the Georgia Pacific Railway Company by the United States Court for the Northern District of Georgia.

At the annual meeting of the New York, New Haven & Hartford Railroad, held at New Haven, Conn., the directors were reëlected on a total vote of 283,903 shares.

The Reorganization Committee of the Terre Haute & Peoria Railroad announces that a majority of assents have been received to the protective agreement which expires November 1.

An Omaha, Neb., report says that the freight-car famine is assuming alarming proportions in the west. The Missouri Pacific is short over 600 cars north of Kansas City, and the Union Pacific, Burlington, Omaha, Elkhorn and Rock Island are far behind in the number of required cars in Nebraska, while the famine in Iowa and Kansas is even worse. The roads have need of cars for extra freight, for wheat is being rushed to market during the present high price.

The annual meeting of the stockholders of the Louisville, Evansville & St. Louis Railroad Company has been postponed until next April.

An estimate places "the total number of grain cars in and about Chicago that cannot be unloaded owing to lack of room at 20,000. Most of these cars belong to the St. Paul and Rock Island roads."

The Chicago & Northwestern Railroad Company reports gross earnings for September $2,843,064, which is a decrease of $408,365 as compared with the same period in 1895.

The Tennessee Coal, Iron & Railroad Company reports earnings for September:

	1896.	1895.	1894.
Net	$28,178	$115,293	$54,800
Charges	47,884	48,735	59,700
Deficit	$19,706	Surp. $66,558	Def. $4,900
Net nine months	572,221	698,053	416,700
Surplus nine months	141,265	248,473	121,200

The Missouri Pacific Railroad Company (Missouri Pacific alone) income account for the years ending June 30:

	1896.	1895.	1894.
Gross	$9,483,192	$8,881,450	$9,476,054
Op. ex. and rentals	7,903,057	6,986,878	7,118,464
Net	$1,580,135	$1,894,572	$2,357,590
Other income	734,316	705,491	1,194,464
Total net	$2,314,451	$2,600,063	$3,552,054
All charges	3,691,949	4,331,393	3,872,243
Deficit	$1,377,498	$1,731,330	$320,189

The table following shows the gross and net railway earnings for the month of September, 1896 and 1895:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Georgia & Alabama.	94,476	46,657	38,424	14,759
Nash., Chatt. & St. L.	435,022	429,556	183,361	187,831
N. Y., Sus. & West'n	214,162	183,065	94,324	75,461
Pitts., C., C. & St. L.	1,154,698	1,432,987	408,832	561,488
San Fran. & N. Pac.	69,827	79,678	27,994	32,299
Tol., Peo. & West'n	84,231	89,593	25,764	25,553

Miscellaneous.

The Bell Telephone case, involving the validity of the Berliner patent, set for yesterday in the United States Supreme Court, is postponed until November 9.

Forest fires have again been raging in northern Wisconsin and Michigan. The smoke was so dense at one time at the northern end of Lake Michigan that navigation was impeded.

A recent decision of the Supreme Court of South Dakota declares valid the law requiring all foreign corporations, in order to do business in the state, to file a copy of their articles of incorporation with the secretary of state and appoint residing agents.

Foreign.

The Viceroy of India has cabled to the British government that, owing to the lack of rain, the crops in northwestern India, in several districts of central India, and in upper Burmah, have been seriously damaged, and that unless rain falls shortly a famine will be inevitable.

During September, 1896, the Scotch shipbuilders launched 32 vessels of 37,234 tons. The total for the Clyde was 36,236 tons—24 steamers of 32,501 tons and 4 sailers of 3,735 tons. For the nine months the aggregate tonnage launched was 276,452 tons, contrasting with 263,554 tons in the same period of 1895.

A cable dispatch to the British government states that merchants in Calcutta are selling American wheat, the importation of which is expected to favorably affect prices.

Insurance companies of the United States doing business in Canada last year drew £1,036,333 from that country in premiums, the Canadian companies themselves drew £1,540,664, and the British companies £1,210,770.

On account of the corn famine that now exists in the states of Aguas Calientes, Guanajuanto and Vera Cruz, the Mexican government has remitted the duties temporarily on corn importations to the amount of 350,000 bushels for the state of Guanajuanto, 125,000 bushels being held for the state of Aguas Calientes and 100,000 bushels for the state of Vera Cruz. This corn must be imported through the ports of Tampico, Vera Cruz and Progreso. It is said that all this supply will come from the United States.

Right Honorable Walter Long, president of the Board of Agriculture, speaking at the recent agricultural conference at Edinburgh, Scotland, expressed his sympathy with the desire of the conference to have foreign and colonial meats imported into Great Britain sold as such, and said that the Board of Agriculture were now considering the matter, to the end of adopting the best means to put that system in force.

Most of the Japanese capitalists, says the *Fiji*, are "just now too much bent upon railroad and banking enterprises The cotton spinning industry, which, during the first half of this year, proved far more profitable than banks or railroads, is at a discount with them. The companies engaged in this industry have declared, for the same period, dividends varying from 10 to 20 per cent., the average being 16 per cent. The reason why this profitable industry is less favored by speculators than banks and railroads is, according to the explanations of some persons, the precariousness of the business. But to us it appears that the prosperity now enjoyed will continue for a long time to come."

An official cablegram from the president of the republic of Uruguay "announces the definite formation of a syndicate in England to furnish funds for the construction of the new port of Montevideo, the work on which is to be begun immediately. The project will involve the expenditure of about $15,000,000. Under the concession granted by the Uruguayan government the custom house receipts will contribute the interest on the loan and go into a sinking fund to extinguish it."

The government of the republic of Guatemala has decided to open an international exposition called the Central American and Foreign Exhibition, to be held in the city of Guatemala, beginning March 15, 1897, and ending July 15, 1897.

Prince Hilkoff, the Russian minister of ways and communications, in an interview at Niagara Falls, N. Y., "said that the present policy of the Russian goverment in regard to the extension of railroads is to extend trade and to furnish further outlets to tidewater, rather than to build for military purposes. Many roads are now in process of construction besides the great Transsiberian undertaking, and immediate plans for the enlargement of the Russian railway system include the building of 2,000 miles of new track. These new facilities will open up many new industries, will facilitate the development of Russian iron mines and petroleum wells, and will secure means of communication for large agricultural districts."

The *Times of India* states that "one of the first acts of the Shah of Persia has been to prohibit the export of lambskins, commonly known as astrakhans, from Persia on July 14 last. This is considered a wise step, as the present condition of the country can ill afford the wholesale destruction of new-born lambs, although the interdict in question will cripple for a time a not unimportant channel of trade with Russia."

At Budapest, recently, the International Peace Congress passed a resolution to exclude from all school books anything calculated to foster a warlike spirit. A committee was appointed to study the best means for the transformation of armies and the establishment of a universal language. Another resolution was in favor of special bureaus for the exchange of children between various peoples with the view of promoting closer union among nations. The congress condemned duelling and passed a strongly worded resolution upon the Armenian massacres.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Railroad—Stock—Injury—Contract.

The Supreme Court of Georgia held, in the recent case of Comer et al. vs. Stewart et al., that although the shipper by rail of live stock under a special written contract was by its terms bound, in case of accident, to feed, water and take proper care of the stock at his own expense, yet where such agreement further stipulated that the carrier's employees should provide the owner or person in charge of the stock all proper facilities on train and at stations for taking care of the same, if injuries to the stock resulted from want of food, water and attention because of the carrier's failure to furnish such facilities at the proper time upon the arrival of the stock at destination, the carrier would be liable for such injuries.

Building Association—Indiana Law.

The Supreme Court of Indiana held, in the recent case of The Maine Guarantee Company vs. Cox et al., that a finding that a foreign building and loan association had at the time of the trial no organization "of any kind or character in the state of Indiana as a building and loan association, or to do or transact business of any kind," justified a judgment awarding it only the principal of a loan it had made in the state with simple interest, and refusing it the dues, premiums and fines which its contract called for in addition to such principal and interest, and that the finding that it was not authorized "to do or transact business of any kind" necessarily implied that the contract was made when it was not authorized to loan money as a building association.

Contract—Sale of Timber.

The Kentucky Court of Appeals held, in the recent case of The Asher Lumber Company vs. French, that under a contract between appellant and appellee by which appellant agreed to pay appellee certain prices for timber, to be paid "when titles are examined and found good and the timber branded," if appellee tendered to appellant trees of the kind mentioned in the contract within a reasonable time after its execution, and if he had good title to the same, it was appellant's duty to receive and pay for them, and if appellant refused to comply with the contract appellee was not required after that time to make an actual tender of timber, but he might cease to buy or procure any more under the contract, and sue and recover damages on accout of appellant's failure to comply with the contract. The court further held that an oral contract for the purchase of standing trees to be speedily removed from the land is valid provided the trees are so marked or described as to be easily identified.

Municipality—Ordinance—Railroad.

The Supreme Court of Indiana held, in the recent case of The City of Shelbyville vs. Cleveland, Cincinnati, Chicago & St. Louis Railway Company, that the act of March 4, 1893 (Revised Statutes of 1894, section 5173), authorizing cities to provide for the safety of their citizens from the running of trains by requiring railroad companies to maintain lights at points where their tracks cross the streets at grade, and giving the cities power to prescribe the kind of lights to be maintained, only empowered such cities to make reasonable provision for lighting the railroad crossings so far as the safety of travelers demand it, and not to enter into a general system of street lighting at points near the railroad crossings at the expense of the railroad companies. The court further held that a city can only pass such ordinances as the legislature has authorized it to pass; that under the statute in question the city could only order lights where safety from passing trains demands them; that an ordinance which did not discriminate between such places and points where unused switch tracks cross streets was unreasonable; that it was competent for a city using electric lights to order railroad companies to use electric lights at dangerous crossings, but it could not compel the use of a patented device or one controlled by a monopoly, and its power was limited to requiring so much light as would render the crossing safe, and that such an ordinance, to be valid, should prescribe when and how long the crossings are to be lighted.

Husband and Wife—Evidence.

The Supreme Court of Georgia held, in the recent case of Jones vs. Hough, that upon the trial of a proceeding instituted against a husband and wife by the executrix of a deceased mortgagee to foreclose a mortgage executed by the defendants to secure their joint and several promissory note, dated January 22, 1885, and payable to the deceased, the wife was not a competent witness to testify in her own behalf that the note and the mortgage were given for the husband's debt, and that she signed these instruments as surety for him. It appearing from an inspection of certain books of account kept by the deceased in his own handwriting, and covering a considerable period of time prior to the date of the note, that they contained no charges against the wife, but did contain an account made out against the husband alone upon which was an entry in these words: "January 22, 1895, received payment by note," the court held that these books, and an account made out upon a separate piece of paper against the husband by the deceased upon which was a receipt in the following words: "Received payment by note January 22, 1895," signed by the deceased, were admissible in evidence in behalf of the wife, they being offered to show that the note was the debt of the husband alone, and it appearing that the principal of the note was exactly the same as to amount as would be due upon the account after computing interest thereon to the date of the note, and that whether or not the evidence thus offered was sufficient to establish the wife's defense was a question for the jury, and that the court erred in rejecting this evidence and in directing a verdict for the plaintiff.

Sale—Hides—Condition.

The Kentucky Court of Appeals held, in the recent case of The National Oak Leather Company vs. Armour-Cudahy Packing Company, that the purchaser of a carload of hides, when sued for the purchase price, had the right to recover by way of counterclaim the damages he had suffered by reason of the inferior quality of a former shipment of hides from plaintiff, although he had used the hides after discovering the defects, as he had paid for them before he had received them or had an opportunity of inspection, and the letters of plaintiff, who was a non-resident without property in the state, were such as to justify the conclusion that the claim for damages upon that carload was admitted and would be paid or allowed on the next settlement between the parties. The court held further that the defendant was also entitled to recover by way of counterclaim the damages suffered by reason of the inferior condition of the second carload of hides, for the purchase price of which the suit was brought, although he had used them also after discovering the defects, as the plaintiff had refused his offer to surrender all except such a number as was necessary to indemnify him, and he had then used them to prevent their loss, and that while ordinarily the vendee may not prescribe the conditions on which he will return or surrender the goods, the quality of which he asserts does not satisfy the contract, yet here the original claim was unpaid, as well as other necessary expenses, and defendant had the right to retain enough of the hides to indemnify him for his loss, and plaintiff having refused his offer to surrender the remainder, there was nothing left for defendant to do but use them.

Railroad—Accident—Fellow-Servants.

The Kentucky Court of Appeals held, in the recent case of The Illinois Central Railroad Company vs. Hilliard, that where the conductor of a freight train was injured by the giving way of a round of a ladder attached to one of the cars, which was caused by a defective bolt, the company was liable for the injury if it knew of the unsound condition of the ladder, or could by the exercise of ordinary care have known it in time to remedy the defect, unless the conductor himself knew or by exercising ordinary care could have known the ladder was in such condition, and that the court properly so instructed the jury in an action by the conductor against the company to recover for the injury. The court held that the conductor and the car inspector were not fellow-servants in the sense of being upon a common footing and agents of each other; that the court properly refused to instruct the jury that the conductor could not recover for the negligence of the car inspector unless that negligence was gross negligence; that there is a difference in the degree and character of examination of cars required of a car inspector, who is employed for that special purpose, and that required of a conductor, who cannot reasonably be expected to make such close examination as to discover a latent defect, and that as the evidence in the case showed that the bolt which held the defective round of the latter was so rusted and worn that the top slipped off when plaintiff grasped the round, the jury had the right to conclude that the inspector could and would by the exercise of ordinary care have discovered the defect, and that the conductor could not have discovered it by the exercise of the degree of care required of him.

BUSINESS NOTES.

Grain Diverted from New York.

Current newspaper accounts are to the effect that there is not the same demand for steamers and sailing vessels to carry grain from New York that there is from southern ports, especially Newport News, because the differential rates of the Joint Traffic Association from the west to Newport News, Baltimore and other southern points are cheaper than to New York. "While every available steamship and sailing vessel is being pressed into service from Baltimore, and ship brokers say that the supply of vessels is still unequal to the demand from that port, the chartering of tramps from New York, brokers say, hasn't yet amounted to anything. Ships of the regular lines are still carrying the grain from this, the greatest commercial port of the United States."

London Dock Rates on Flour.

The New York *Commercial Bulletin* says mail advices from London "indicate that the proposed increase by the London and India Docks Joint Committee in the charge for 'inside delivery' of flour will not go into actual operation for some time at least. This shows to a marked degree the force of concerted protest. The proposed increased tax on flour in London 'delivered to lighter' was 18d. per ton, or an increase of to 3s. 6d. from the present charge of 2s. per ton. It was the general intention to put this increased charge into operation early in the summer. The northwestern millers, the flour exporters and the steamship agents of the various lines running from the various points to London all protested vigorously, however, and a postponement was granted until October 1. As the steamship companies made contracts to carry flour on the old conditions after October, a further postponement of the enforcement of even a modification of the original charges has now been granted until November 1."

Gold and Silver in Europe.

The New York *Journal of Commerce* publishes the following corrected exhibit of the total gold and silver in the European national banks:

		Millions of dollars			
		Gold.	*Gold.*	*Silver.*	*Silver.*
Bank of France	1880	110		244	
	1896	395	Inc. 285	248	Inc. 4
Bank of England	1875	133			Nominal.
	1896	230	Inc. 97		Nominal.
Prussian Bank	1875	25		*36	
Reichsbank	1896	170	Inc. 145	51	Inc. 15
Bank of Italy	1884	58		14	
	1896	65	Inc. 7	11	Dec. 3
Bank of Spain	1888	15		55	
	1896	42	Inc. 27	51	Dec. 4
Bank of Belgium	1873	8		13	
	1894	21	Inc. 13	10	Dec. 3
Austria-Hungary B'k.	1876	20		34	
	1896	145	Inc. 125	64	Dec. 30
Bank of Netherlands	1881	9		45	
	1896	13	Inc. 4	34	Dec. 11
Bank of Russia	1878	100		13	
	1896	425	Inc. 325	4	Dec. 9

Increase of gold		$1,028	Inc. silv.	$19	
		215 p. ct.		4.2 p. ct.	

* These figures are estimated, in the absence of specific data; quite possibly, they may be too low.

Anthracite Coal Trade.

The Anthracite Coal Operators' Association held a meeting at New York last week. Exporting coal to Germany was decided to be impracticable, the principal reason being the inability of the anthracite coal dealers to compete with the product of Wales. Welsh coal now sells in Germany for $6 per ton, and it would cost $5 per ton to transport American coal across the water. Letters from coal operators in San Francisco complained that the importation of Welsh coal to that city had destroyed the Pennsylvania coal trade. It was shown that about 100,000 tons of Welsh coal were received there annually, and sold for $5.50 to $6 per ton, while the freight alone on Pennsylvania coal to the Pacific coast, either by rail or water, is $7 per ton. N. W. Perry, editor of *Electricity*, read a paper on the use of culm and its conversion into gas and electricity, giving the cost of installation and of transmission. In a paper on "Waste and Burdens of the Anthracite Coal Trade," John C. Haddock called attention to the difference between the price the operator secures and that which the consumer pays, "pointing out the large amount taken in freight and commission to the middleman."

Russian Oil Wells.

The report of a British consul on the trade of Baku "makes one envy the fortunate proprietors of oil wells in the vicinity. He says oil is still being procured in unlimited quantities, and during his stay at Baku one fountain was throwing up oil at the extraordinary rate of about 10,000 tons daily, and bringing in an income of nearly £6,000 per diem to its owner, and although it did not continue at this rate very long, nevertheless during the last two months this fountain has thrown up over 300,000 tons of naphtha, which, at the market rate that has prevailed this year, represents a sum of from £150,000 to £160,000. This oil was run into two large ponds which had been prepared for its reception, and from thence it was pumped, as fast as the capacity of the machinery would allow, direct into tank steamers lying alongside the adjoining jetties, for conveyance to Astrakhan. He adds that the product of this well was sold at current rates as fast as it could be taken away, and it is worthy of note that the sudden addition of such a large quantity of naphtha to the already available stocks in no way affected the market value of crude oils, prices remaining firm."

The "Leading European Port."

It is said that one effect of the Manchester Ship Canal has been to "deprive Liverpool of her supremacy as a leading European port." In the last ten years Hamburg has passed Liverpool, as the following figures giving the tonnage of the two ports show:

	Tons	
	1885.	1895.
Liverpool	4,270,000	5,966,000
Hamburg	3,700,000	6,256,000

The London *Chronicle*, referring to this subject, says: "Liverpool would be the last to admit that the trade has gone to Manchester. The effect of the ship canal has been to stimulate the Liverpool dock authorities, and but for its action the Liverpool trade might have progressed less rapidly than the figures show. The Liverpool Dock Board never reduced its dues until the ship canal was projected. It has reduced them several times since, and during the last twelve months has lowered rates to the amount of £100,000. But all the time the board has been accumulating a surplus for which it had no use. It has still three-quarters of a million of 'unappropriated profits,' which may be described as unnecessary dues. Liverpool cannot expect to keep its trade if it taxes the shipping to this extent."

The British Steel Industry.

The British Iron Trade Association has published the statistics of the production of steel in the United Kingdom for the first half of the year. "The figures show an almost unprecedented increase. The total production for the six months was 1,969,320 tons, or at the rate of 3,938,640 tons a year, which is by far the largest output of steel hitherto arrived at in a single year by any European country. The figures have, however, in several years been exceeded by the steel output of the United States. There is every probability that the demand for steel will continue on a large scale. Some descriptions of that metal have lately been even scarce, and there is difficulty in having orders filled. There is a continuous substitution of steel for wrought iron for structural and other purposes, and it is probable, although by no means certain, that the great advance in the output of steel will be coincident with a decreased production of malleable iron. The growth of the steel trade in all branches has been so rapid that the plant now in operation in this country is generally of the most modern kind, and if our manufacturers can only keep free from strikes and get fair terms from railway and shipping companies they may take heart of grace for the immediate future."

Cotton Goods in Africa.

According to the *Handels Museum*, there is an ever-increasing consumption of American cottons in Africa, considerable quantities having been imported during the last four years. During last year 26,250,000 yards of coarse American cotton tissues were imported. It is principally the east coast which has offered the best market for these goods, while the markets of the west coast are monopolized by English and German houses. On the coast of the Red sea, as far as Somali, American cottons are in great demand. The uses of these articles by the natives are very simple and primitive. To cover their nakedness they take a piece about twelve yards long, which they roll round their loins, bringing it over the right shoulder and fastening it to the girdle. A tissue of somewhat finer description is used as a mantle or tunic, and this kind of article does not, it is said, cost more than a few pence. Cottons were formerly shipped in bales by sailing vessels, and in small quantities, according to the demands at the place of consumption, but this method of transport has of late completely changed. At the present time cottons are shipped on steamers and in much larger quantities. The vessels unload at Aden, where the distribution of the merchandise is effected for the various parts of the east coast. American cottons have, it is said, a brilliant future before them, not only on the east and west coasts of Africa, but also in the interior of the dark continent."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade continues along conservative lines, buyers and sellers preferring to defer business until after election. Traders are more hopeful as to the outlook for business later in the year and next spring. The reaction in wheat prices, after an advance of 22c., is the natural result of a desire to realize profits, an advance in rates for money and enormously heavy receipts of wheat at primary markets caused by higher prices. Comparatively small stocks of wheat in importing countries, a decrease in the world's total production of wheat for two years in succession, unexpected shortages in Russia, India, Argentina and Australia, and only an average crop in the United States, are interpreted to mean that the price of wheat will advance further.

Total exports of wheat (flour included as wheat) from both coasts of the United States, and from Montreal this week are not quite as large as last week, or for four preceding weeks, but are heavier than in corresponding weeks in three preceding years, amounting to 3,823,000 bushels, as compared with 4,156,000 bushels last week, 2,658,000 bushels in the corresponding week one year ago, 3,353,000 bushels two years ago, 3,327,000 bushels three years ago, and as contrasted with 4,078,000 bushels in the third week of October, 1892. Exports of Indian corn continue heavy, amounting to 2,897,000 bushels for the week, 50 per cent. more than last week, more than twice as much as in the week one year ago, thirty times as much as in the corresponding week of 1894, and three times as much as was sent abroad in the like week of 1893, and in 1892.

Corn prices sympathize with wheat quotations, and the only other two prominent products, prices for which are lower, are apples and cottonseed oil. The firm and practically unchanged prices for pork, lard, coffee, sugar, refined petroleum and copper indicate the strength of the general market, while advances are reported for wheat-flour and oats, for butter, cheese and eggs, and for canned vegetables and dried fruits, among food products; for cotton, wool, leather, print cloths, and for pig tin and crude petroleum. Interest in iron and steel products lags, but prices are firm, buyers evidently preferring to pay more after November 3 than to order now. It is noteworthy that while higher prices after election are not predicted in all lines lower prices are not anticipated for any staple.

Stock values at New York have advanced on professional operations, reflecting the expected political outcome and the favorable grain situation. There is little public or foreign support, and large interests are generally conservative in view of the uncertain condition of the money market between now and election. A premium is still paid for gold, and small but steady withdrawals reduce the government specie reserve, a notable instance being the taking of $1,300,000 from the Treasury on Friday by the New York agents of the Bank of California. The advance in the Bank of England rate, the rise of discount in London, and the hardening of exchange cut off further gold imports for the time being. Demand sterling is 4.84½@4.84¾. Total gold receipts since August are $57,000,000, and about $10,000,000 more is in transit hither. Western railroads are choked with grain, and the lines west of Chicago are forming an association to regulate competition, based on the Joint Traffic Association agreement of the trunk lines. Silver, after a slight rally, is weak, and declining at 30 1/16d. per ounce in London and 65⅛c. in New York.

Mercantile collections continue as difficult to make as heretofore, except in a few of the larger cotton-growing states and in the spring wheat region, where rapid marketing of cotton and of wheat has rendered funds more plentiful. There is a disposition on the part of planters to hold cotton for an advance; another cargo of wheat has gone from San Francisco to India; the Tacoma and Seattle lumber and wheat export interests continue active; a large number of manufacturing industries have started up, and the outlook for the export trade is such that available vessel room has been engaged for months in advance and freight rates continue upward.

Total bank clearings in the United States increased, amounting to $1,047,000,000 this week, about 5 per cent. more than last week, but 10 per cent. less than in the third week of October, 1895, and 10 per cent. less than in the corresponding week of 1892. The increase this week as compared with the week in 1894 is 15 per cent., and as contrasted with 1893 it is 13 per cent.

There are 292 business failures reported throughout the United States this week, which is 13 more than last week, 33 more than in the corresponding week last year and 71 more than in the like week of 1894, but 37 fewer than in the third week of October, 1893.

General trade at Toronto is fairly satisfactory, and the outlook is for improvement. Demand for winter fabrics is active, as is that for staples from Manitoba and British Columbia. The export movement of grain and apples from Montreal is active. Manufacturers of wool and clothing at that city have agreed to shorten credits one month on sales for spring and fall delivery, 1897. There is considerable activity in lumber shipments from New Brunswick, where the prospect is for a large lumber cut. Wet weather has interfered with agricultural interests on Prince Edward Island. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $21,356,000 this week, slightly in excess of the total one week ago, not quite 5 per cent. less than the corresponding total last year, but 5 per cent. larger than the like total in 1894. There are 48 business failures reported throughout the Dominion of Canada, as compared with 30 last week, and with 36 respectively in each of the corresponding weeks in 1895 and 1894.

FINANCIAL.

The Money Market.

Conservative sentiments still reign in financial circles at New York, and the indications are that banking interests are opposed to inflation of a speculative nature prior to the election. The excitement in the wheat market and the rush of grain to market has caused some additional demand for funds, though at the close of the call for money at the interior it is said to be lessened. The demand for gold for hoarding continues, though probably on a smaller scale, and it is noteworthy that of this week's large imports of specie only $500,000 was exchanged at the Treasury for greenbacks, while small but steady withdrawals had reduced the Treasury gold reserve to $121,256,000, and on Friday $1,300,000 more was withdrawn. Cash gold has been quoted throughout at ¼@⅜ per cent., and calls on gold for 60 to 90 days have been 1¼@1½ per cent. The current imports have, however, been adequate to the demand, and the advance of the Bank of England rate to 4 per cent., the sharp rally in exchange and the cessation of gold engagements have had little influence on the money market here. Toward the close of the week the supply of money on call at the New York Stock Exchange improved, and the rate for bankers' balances, which had been up to 7@8 per cent., fell off to 5@6 per cent., while belated lenders were forced to take 3@4 per cent. in some instances. Time money is scarce, and lenders are not anxious to make arrangements over the election. There is considerable demand, however, and 6 per cent., plus a more or less stiff commission, is offered. A little business is doing in commercial paper of the choicest kind at 7@8 per cent., but offerings are light and the supply very limited.

The New York Banks.

Last Saturday's bank statement was in accord with the known movement of money during the week, and with the conservative policy which prevailed in financial circles. The total reserve decreased $4,885,000, and deposits fell off $4,289,000, while loans were reduced $254,000. As a result of the other changes the surplus reserve decreased $3,688,000, the figures of the statement comparing as follows with those of the preceding week:

	Oct. 10, '96.	Oct. 17, '96.	Changes.	
Loans	$456,393,300	$456,139,300	Dec.	$254,000
Specie	58,450,400	59,136,400	Inc.	686,000
Legal tenders	71,770,000	66,198,500	Dec.	5,571,500
Deposits	458,484,800	453,695,200	Dec.	4,789,600

Surplus reserve	15,599,200	11,911,100	Dec.	3,688,100

At the corresponding date last year the surplus reserve was $15,176,900, against $62,513,675 in 1894.

Silver.

The decline in the silver market seems to have been checked, though prices have been irregular this week on narrow fluctuations. There has apparently been more demand, while the supplies have not been excessive. Speculative liquidation in silver also seems to have been fully completed. Transactions in bullion certificates on the Stock Exchange here amounted to 76,000 ounces, at 65⅝ up to 66, with a recession to 65½.

Foreign Exchange.

After another sharp depression of rates, attended by further considerable engagements of gold in Europe, the exchange market rallied sharply. This disposition was increased by the advance of the Bank of England rate to 4 per cent. on Thursday and the marked strength of discounts in London, where the open market figures went up to 3@3½ per cent. In all essentials the market here was not changed. The supply of commercial bills is large and the commercial inquiry for exchange a light one. Importers of gold have been the chief buyers of bills to complete their arrangements, and the continued existence of a premium of above ½ per cent. for cash gold and 1¼ per cent. for calls in gold is an element in the market in connection with the gold movement.

Posted rates were marked down from 4.81½@4.84½ to 4.80½@4.84 on last Monday, to correspond with the very weak tone of actual transactions, demand sterling falling from 4.83¾ to 4.83¼, and business was actually reported at a shade under the latter figure. On Wednesday, however, the market began to harden on expectations that the Bank of England rate would be raised. Posted rates were accordingly raised to 4.81@4.84½, and on Thursday the market had another advance, posted figures being put at 4.81½@4.85, and actual business was up to 4.84@4.84½. On Friday the market was firm and higher at 4.84¾ for demand bills.

More or less reticence has been observed in regard to gold-importing arrangements this week. The total engagements, so far as known, foot up, however, about $6,000,000, and the gold actually arrived here and at Boston during the week was $4,625,000, and the grand total thus far since August is $53,015,000. An additional engagement of $500,000 was made in London on Friday.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Oct. 17.	Oct. 19.	Oct. 20.	Oct. 21.	Oct. 22.	Oct. 23.

ACTUAL BUSINESS BANKERS' SIGHT STERLING.

4.83½ @ 4.83¾	4.83¼ @ 4.83½	4.83¼ @ 4.83½	4.83¾ @ 4.84	4.84 @ 4.84¼	4.83½ @ 4.83¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.80½ @ 4.80¾	4.80 @ 4.80½	4.80 @ 4.80½	4.80½ @ 4.81	4.80¾ @ 4.81	4.81¼ @ 4.81½

Closing quotations on Friday for actual business in other class of bills were: Cables, 4.85¼; commercial bills, 4.80¼; francs, 5.22½@5.20; reichsmarks, 94⅜@95 1/16.

The advance in the Bank of England rate from 3 to 4 per cent. was fully expected. The bank this week lost £1,497,000 specie, and its reserve is 50.55 per cent., against 50.26 per cent. last week. In the London open market discount has been decidedly firm and higher at 3@3½ per cent., and call money is 1¼@1½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending October 16, 1896:

	1896.	1895.
Dry goods	$1,477,473	$2,663,230
General merchandise	4,671,262	7,858,970
Totals for the week	$6,148,735	$10,522,200
Previously reported	359,835,660	410,971,147
Since January 1	$365,984,395	$421,493,347

The exports (exclusive of specie) from New York to foreign ports for the week ending October 20

were $1,005,220 above those of last week. The following enables comparisons to be made with the corresponding period last year:

	1896.	1895.
For the week	$8,596,445	$9,382,884
Previously reported	299,955,427	267,343,492
Since January 1	$308,551,872	$276,726,376

THE STOCK MARKETS.

The New York Stock Market.

While larger interests in the market maintain a conservative attitude, the tone this week was bullish, and the tendency of speculation has generally been toward higher prices. The market is a narrow one and the buying has been furnished by covering of shorts, plus scattered operations on the bull side by smaller traders. The favorable accounts of the political outlook, the phenomenal rise in wheat, and the large gold engagements, all tended to create bullish feeling in the street, and it should be noted that the market was unaffected by the sharp reaction of wheat prices or by the advance in the Bank of England rate to 4 per cent., causing, as it did, a rally in exchange that has for the time being put another check upon gold importations. The feeling in financial circles, as already noted, is not favorable to a bull speculation in the nature of a discounting of the probability that sound money will triumph. The hoarding of gold has continued and the demand for it, or for calls thereon, have absorbed the current gold importations and caused steady withdrawals of gold from the Treasury. The general fear of tight money between now and election has restricted public buying, though toward the close of the week call loan rates have become somewhat easier. This is due, apparently, to the unwillingness to make time loans, which of course has brought additional supplies of funds into the call loan market and given encouragement to the bull contingent among the traders. The latter, indeed, have had the market mainly to themselves, there being very little outside interest, while Europe has not been a factor, although American stocks in London have been strong to steady. The advance of the Bank of England rate from 3 to 4 per cent. on Thursday was fully expected, and neither that action nor the rise in the open market quotations there to 3½ per cent. for discount have produced any speculative disorganization. In fact the feeling there seems to be one of satisfaction that steps have been taken to protect London from a further drain of specie to the United States, which the condition of the breadstuffs supplies and markets of the world, with the probable victory for sound money here, would render almost inevitable. Among the most satisfactory indications of the week was the strength of and advances in the bond list. Governments were, indeed, a feature, the new 4s rising from 115¾ to 117¼, while both investment and speculative issues of railroad mortgages have generally been higher. Another circumstance worthy of notice is that New York Stock Exchange steals are quoted this week at $18,000, an advance of several thousands over the last transfers. Friday's market was strong and advancing till the last hour, when the taking of $1,300,000 gold from the Treasury caused a halt and slight reaction.

While the improvement has been general a few stocks have stood out in the week's transactions. The granger railroad shares are affected by the enormous movement of grain, which on some of the lines has resulted in a serious scarcity of cars and motive power. The fact that the roads west of Chicago are, as noted elsewhere, perfecting an agreement for the maintenance of rates, and to that end they are copying the admirable plan embodied in the association of the trunk line roads, does not fail to influence speculative sentiment in connection with this group of properties. Burlington has been their leader, on the belief that the large amount of corn from last year remaining in its territory give the road virtually two crops to transport, and its price has accordingly moved up from 68½ to 74⅛. St. Paul also advanced from 69½ to 73⅛, and the other grangers were correspondingly strong. Reading is as feature, rising from 22¾ to 25¾, with corresponding advances in the junior bonds. The movement in Reading is based on the completion of the reorganization and the favorable state of the coal trade. Louisville, which advanced from 42¼ to 46⅛, was supported by the foreigners, and considerable attention has been paid to Atchison, Union Pacific and other reorganization stocks.

In the industrial group Sugar has, of course, been the feature. The reports about trade conditions were more favorable, and the threatened competition is not considered likely to materialize. The price advanced from 106⅞ to 112½. Chicago Gas has also risen from 59⅝ to 69 on the idea that the defeat of the Altgeld regime in Illinois will benefit all corporative interests, and will in particular end the attacks of politicians on the gas organizations and enable them to pay a dividend. Western Union was strong at the close of the week, going from 83 to 86, in sympathy with the general market.

Boston Stock Market.

The market has shown more strength, and the tendency of values has been upward. Atchison closes 1⅛ points higher, with Chicago, Burlington & Quincy active and 5⅛ points higher at the close. Other railroads also closed higher. Boston & Montana shows an advance of 4 points for the week with quite liberal trading. Sugar has been active and closes 3⅛ points higher. Bay State Gas has been active and loses 1 point for the week.

Prices of principal shares, with volume of transactions, have been as follows:

TRADE FEATURES.

FIRM AND GENERALLY ADVANCING PRICES. VOLUME OF BUSINESS CHECKED. NO GAIN EXPECTED PRIOR TO ELECTION.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, October 23.—The tone of trade has ruled quiet in most departments of this merchandise market, but the general feeling is more hopeful and firmer. The tone of the money market is rather easier, but views of lenders and borrowers are too much apart to result in much business. Year money is offered by out of town savings banks at 6 per cent., and bids of 6 per cent. are made on six months' factory paper, with makers not disposed to pay over 5½ per cent. Mercantile paper ranges up to 7 per cent. The boot and shoe market is firmer, with 5 to 15c. per pair advance asked for men's-wear goods, and some business taken on this basis. Manufacturers are generally not trying to push spring sales, as they look for leather to go higher. Women's goods for spring are being ordered freely, at about the former basis of price. Leather is firm and higher. Hemlock sole leather has advanced 1c., with union fully 2c. higher. Upper leather is costing more. Hides are scarce and firm at the full advance. Iron and steel are quiet but steady, with lumber steady and in moderate demand.

Providence, October 23.—General business remains in a waiting attitude. This is especially true in such lines as woolen and jewelry manufacturing, stoves, wholesale woolens, etc. Inquiries among manufacturing jewelers show that business this year is much behind that of last year, estimated to be a decrease in volume from 20 to 50 per cent. Trade had gradually improved in this line of business, however, from August 1 up to ten days ago, at which time orders dropped off considerably, and not much increase is looked for now until after November 3. In this line of industry, as in some others, it is said that stocks in the hands of dealers are light; that they are keeping back orders until after election.

Philadelphia, October 23.—Wool is rather quiet and the market is firm, with a disposition on the part of growers to hold their product. A fairly active trade is being done in dry goods. Lumber continues dull. Tobacco is very quiet. There is a fair demand for drugs, paints and glass. Sugar in better demand and the market is firm. The coal output has exceeded the demand, and trade is not active. Iron shows no material improvement, although the market is firm.

Pittsburgh, October 23.—Local business conditions have changed but little. There is a fair demand for staples, and prices are generally well maintained. Collections show no improvement. Quite an improvement is noted in the local iron market. A number of large sales of iron are reported at a slight advance. The market is firm at present quotations and the outlook is promising.

Baltimore, October 23.—Business continues about as usual. The past three or four weeks salesmen on the road report merchants buying conservatively, but the general tone and sentiment seem to be one of confidence in a good trade the balance of the year and a very large business the coming spring. Collections, as a whole, are fairly satisfactory, although in some sections they are backward owing to local causes.

Buffalo, October 23.—Wholesalers report a fairly good trade, but inclined to be spasmodic. Collections are still slow. Lake traffic is improving, and prospects are good for a brisk closing season.

West and Northwest.

Cleveland, October 23.—General business conditions are without material change, and transactions continue along very conservative lines.

Cincinnati, October 23.—Business continues quiet.

Detroit, October 23.—Merchants report a disposition on the part of buyers to defer purchases until after election. Collections continue unsatisfactory.

Chicago, October 23.—Trade generally is a little quiet, as buyers are holding off until after election. The country is carrying light stocks, and as grain is moving freely from farmers' hands, merchants are looking for a good increase in orders after the election. For the present, orders are mostly small in size, and of a sorting-up character. The cool weather has increased sales of clothing and shoes, but they are hardly up to last year. Dry goods show no new features. Leather is fairly active, prices on sole advancing 1c., making 3c. so far. Calfskins are up 5c. per pound on waxed stock. Tanners are indisposed to sell, as most of the large ones have reduced their holdings of desirable weights. Russia stock is out of season, but tanners predict an advance. The net advance in leather is 15 to 20 per cent. Groceries are selling freely. Canned vegetables are stronger and dried fruits higher. Light and heavy hardware show no change. Orders for all descriptions of steel are moderate, and manufacturers are not selling at present prices. The rail mills here are out of orders and have closed. The pig iron situation is without change. Butter and eggs have advanced. Produce is fair. Wool receipts, 514,923 pounds. Grain dealers are the largest borrowers, finding it difficult to secure enough to move the grain. The advance in prices has tied up about $8,000,000 in margins and in grain that is blockaded on the railroads. Banks are afraid to extend credits to any extent. Collections are generally good.

St. Louis, October 23.—The movement of general merchandise is fair and satisfactory under existing circumstances. Stocks are neeessarily low and replenished only as actually needed. The feeling is gradually bettering and is substantial, especially in the country districts, where money is more plentiful than it has been for some time. Manufacturers and jobbers, while having but few salesmen on the road, are selecting samples and preparing for an early return of normal conditions. Agents for pig iron report fair sized orders, with light stocks in consumers' hands. Shoe leather is fair in demand, while harness makers are ordering somewhat liberally. Hides are unchanged and firm. There is a slight increase in the movement of lumber. Collections are satisfactory. The banks say borrowers are more numerous, but are keeping rates at former figures.

Kansas City, October 23.—Dry goods, boots and shoes and groceries show improvement over last week, with fair collections. Live stock receipts were normal, with good values.

Milwaukee, October 23.—Trade conditions are quiet in every branch of business. Collections are slow.

St. Paul, October 23.—The general trade situation shows some improvement over last week, and finds expression chiefly with hats and caps and fur and boot and shoe houses, where, except for advance orders, trade has been waiting. There is also a continued improvement in dry goods and other staple

lines outside of leather, where there is a falling off, attributed to the advance in prices. The leading cause assigned to the improved trade condition is, as a week ago, the sharp advance in wheat, which is being marketed freely. Collections continue good.

Omaha, October 23.—With but few exceptions trade continues dull. Collections are dull.

Sioux Falls, October 23.—Favorable markets continue to stimulate wholesale trade, although orders are of the hand-to-mouth character. Retail trade is fair. Collections good.

Southern Cities.

Charleston, October 23.—A slight decrease is noted in boots, shoes and dry goods. Groceries are holding up. Retail trade has increased. Collections are somewhat slow. The demand for phosphates is somewhat better.

Savannah, October 23.—An increase is shown in retail circles, due to the recent storm, which distributed money to the working trades. Wholesale trade is fair. Collections for both are fair. Receipts and shipments of naval stores are light, due to the scarcity of freight room. These is a falling off in turpentine prices. Rosin market is firm.

Atlanta, October 23.—No material change is noted in trade conditions.

Augusta, October 23.—Wholesale trade is fair, with collections somewhat lagging. Some disposition is shown on the part of farmers and country merchants to hold cotton for higher prices. Augusta cotton mills are all in operation, two having resumed this week.

Jacksonville, October 23.—There is no change in general trade.

Birmingham, October 23.—Trade conditions are unchanged. Collections are improving, and a somewhat better feeling prevails.

Chattanooga, October 23—The main excitement in business is in grain. Mills are buying wheat rapidly. Liquor dealers have been buying, expecting a rise in prices. The leather market is good.

Memphis, October 23.—General trade is unchanged. Collections are fair.

Nashville, October 23.—Output of goods continues as large as in the past two weeks, which is very satisfactory. Collections are good. The banks continue the policy of no new loans. Outside money has found takers at 10 per cent.

New Orleans, October 23.—The improvement noted in general trade continues. Receipts of new Louisiana sugars meet prompt sale. Rice is a short crop but prices are satisfactory to producers. The movement of cotton continues liberal. The tone of the market is firmer at the decline. Little or nothing is doing in securities. Bankers are confining accommodations as nearly as possible to actual trade requirements.

Galveston, October 23.—A noticeable decrease in the volume of business owing to election agitation is apparent, and wholesalers, as a rule, do not anticipate any improvement until the political question is settled. Cotton continues to move rapidly, and collections are reported exceptionally good.

Pacific Coast.

San Francisco, October 23.—The merchandise market is unchanged in volume, though prices, in some instances, have an upward tendency. The price of wheat has declined several points. Freights are firm. Another cargo of wheat has been shipped to Calcutta, India. Collections are slow.

Portland, October 23.—Lumber is quiet. Farmers continue to hold their wool for better prices. Hops are firm, and dried fruits are advancing in price. Wholesale and retail dry goods and grocery houses report business fair and collections improving. Wheat is being extensively marketed.

Seattle, October 23.—Trade is good in all lines, marked improvement being noted in groceries, hardware and cereals. There is also a noticeable increase in shipping lumber and wheat operations. Fish supplies are limited, but prices good. The oyster trade is particularly active.

Tacoma, October 23.—Wheat for export is arriving freely. Cargo shipments of lumber continue large. General trade shows some improvement over that of a year ago.

Canada.

Toronto, October 23.—General trade is fairly satisfactory, and the outlook is improving. There is a good demand for heavy winter fabrics. Trade with Manitoba and British Columbia is looking up. Payments are improving.

Montreal, October 23.—The demand for dry goods is steady but for sorting orders only. Groceries are moderately active; hardware and paints dull; ocean freights active, and the export of apples and grain continues heavy. Woolen and clothing manufacturers held a meeting to shorten credits and decided to date spring goods April, and fall goods September, which is one month shorter than formerly. Flour is active with an upward tendency. Collections are fair. The outlook is regarded as somewhat better, although immediate results will not be much altered. Quebec City reports orders light and a dull tone pervading, with collections backward.

Halifax, October 23.—There is not much activity in general business this week. Unusually heavy rains have caused much damage throughout the provinces. Wet weather in Prince Edward Island has seriously interfered with potato digging and threshing. St. John, N. B., reports a sharp advance in ocean freights and considerable activity in shipment of lumber. Lumbermen are now getting ready for the woods, and the prospects are that the cut will be large. There is no change in dry fish, which is cheap and in good supply.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM OCTOBER 10, 1896, TO OCTOBER 16, 1896, INCLUSIVE.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week (to Wednesday night only for four Atlantic ports), is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,521,500
Jan. 9	3,471,681	2,587,178	2,409,850	3,308,907	4,183,121
Jan. 16	3,202,124	3,564,459	3,332,050	3,637,687	4,522,219

Dry Goods.

There has been a generally quiet market, with unchanged conditions. Cotton goods are showing rather more tone, and the feeling is more favorable. Buyers have considerable goods at low prices. Printed fabrics are selling seasonably well, while the call for napped goods in the way of flannelettes and outings is very good. Ginghams are steady for staples, with fancies dull. Plaids of all kinds sell well. Dress woolens continue quiet, but some spring orders are being placed, and some mills have made good sales. Men's-wear woolens are quiet, although fair spring orders for low-cost beavers, cheviots and fancy worsteds have been placed. Cloakings are going quite well.

Wool.

The market shows increased strength to values, and a fair amount of wool is being taken, while if holders would make slight concessions from full rates the business done would be largely increased. Traders are feeling quite buoyant as to the outlook for sound money. The scoured basis of fine and fine medium territory wools is now quoted at 30c., while choice staple lots would command 32c. Many holders will not sell at these prices. Fleeces are quiet, but choice washed combings are held 1c. higher. There is a more confident feeling apparent than for some time, and buyers are also more or less affected the same way. Foreign wools are quiet but firm, and holders are obtaining full prices, as supplies are needed. The London sale closed a trifle firmer, while a better tone is noted at the Melbourne sale.

LEROY-BEAULIEU ON SHIP CANALS.

In the current number of the *Economiste Français* M. Paul Leroy-Beaulieu "deals with the subject of ship canals, and, after noticing the results of the Manchester Ship Canal, the Corinth Canal and the Kiel Canal, he concludes with a warning against the projected French scheme for connecting the Bay of Biscay and the Mediterranean. He points out that the financial success of the Suez Canal has been due to exceptional circumstances, because it greatly shortens the distance between two groups of vast populations in the East and in Europe. On the other hand, he thinks it doubtful if the Manchester or Corinth canals will ever yield a return upon more than a small part of the capital embarked in them, and he holds up these two undertakings as an illustration of the great risk that would be involved in the construction of the Canal des Deux-Mers."

QUEENSLAND'S RESOURCES.

The London *Financial News* says: "Sir Henry Norman, formerly Governor of Queensland, has been lecturing in Manchester on the resources of that colony. Naturally, Sir Henry spoke with becoming respect and enthusiasm of the growth and enterprise of Queensland, but the praise was tempered with some wholesome criticisms. For instance, he expressed the opinion that the colony would have prospered more but for over-speculation. There was suggestiveness in the assurance that the government had practiced strict economy 'for some time.' Sir Henry pointed out that of the total debt of nearly £32,000,000 quite two-thirds had been spent so as to be productive."

HONEY FARMING.

The honey trade in this country has grown to great proportions, for honey has ceased to be a luxury, says the New York *Tribune*. "It forms part of the grocer's stock in the smallest hamlet and bakers and candy makers and patent medicine men use it by the hogshead. There are several firms in this city who regard an order of $1,000, $1,500 or $2,000 worth just as a dry goods merchant looks on an order for fifty yards of muslin. New York, Boston and Chicago are the centers of the trade in this country, and London rules the world. The supply is steady, for if there is a shortage in one part of the country or the world, another part is sure to make it up. There is no use in attempting to make an estimate of the value of the crop, but it will go well into the millions. It is known that there are 30,000 beekeepers in the United States, and many who are unknown. Honey comes from all parts of the country, but California and the northern states supply the greater part. The southern states do not furnish as much as would be expected, partly because people are not paying attention to the work, and partly because bees are not cared for as well as at the north. The honey which the southern states do send is different from that of the other states; the product of Florida is considered the best, but that is only as a cheaper grade.

"Honey is put on the market in two forms, in the comb and in the liquid state; the former is known as comb honey, the latter as extracted. The blossoms of white clover and the basswood tree yield the finest honey in popular estimation, and it fetches the highest price. These are northern products. Buckwheat and golden rod yield more and about supply the market from this region. In the region west of the Missouri grows the sage brush, which yields enormously, hence some of the Pacific coast states are producing large quantities. So it comes about that New York, Vermont, Pennsylvania and Michigan produce for the market comb honey and California and Arizona the extracted.

"The farmers now have little to do with the honey production; the business has gone into the hands of specialists. The man who has half a dozen hives is never heard from. An eastern bee man will have from 100 to 500 hives, but a Californian will have as many thousands. During the busy season even the smaller number will keep several men busy, for the bees bring in honey fast.

"It is probable that the business has reached its limit. There is less money in it now than a quarter of a century ago. A skillful keeper will make his bees do pretty much what he wants. And it is only by this skill that the demand is supplied. In 1850 honey was a luxury; farmers had in their dooryards a few hives, either wooden boxes or straw cones, and twenty of them would be a great number. No one paid attention to them save in the springtime, when one of the children watched for a swarm to come out, when such a dinning and thumping on tin pans greeted it as could be heard for miles. In autumn the bees were smoked to death, the hive torn in pieces and the honey sold at the store. Some people proceed in the same way now, but they never sell any honey. In 1852 a clergyman out in Ohio designed and patented a hive which is the basis of all those in use to-day. It was simply four sides of a box, in which were hung eight movable frames. On the top were placed other little square frames and over all a movable cover. In less than a minute the whole hive could be taken apart and inspected. If one box was full another could be substituted and no time lost. Then it was found that to make the comb about six times as much labor was required as to fill it with honey, so thin strips of comb were hung in each box, which the bees immediately fitted for honey. It was discovered that these combs could be emptied of honey and replaced, so a machine called the extractor was devised and is now in general use. So that in olden times forty or fifty pounds of honey was considered a great yield for each hive and the bees were destroyed.

"Now in an ordinary season a hive will produce 75 or 100 pounds of comb honey, besides enough for the bees to live on during the winter, and with the extractor 200 and 300 pounds of liquid honey can be obtained. In California a hive often produces 500 pounds. Now, moreover, the bees are saved.

"The adulteration of honey has attracted no little attention, and laws have been made in many states against it. Even the United States Agricultural Department has made an investigation, and later the state of Michigan. It was learned that comb honey sold in the frame is in the main pure, while that sold in tumblers is heavily adulterated, and some extracted honey pure, but more of it adulterated. The adulteration seems to be the work of large dealers, rather than the producer, and the object seems to be to cheapen the article. In no case was anything injurious to health found. Cheap sweets, like glucose, cane sugar, etc., were used—sometimes to the extent of 75 per cent. There is no such thing as honey made chemically from refuse, as many people believe. In one way adulteration is justifiable—a great many people like the adulterated honey better. Mr. Perrin, of Riverside, Cal., who may possibly be considered the pioneer in the work, writes that when in business in Brooklyn several years ago he found that by mixing white sugar with some very dark honey both the taste and appearance were improved. His wagons carried both kinds, plainly marked, and often a day's sales would show 90 per cent. of the sugared honey; sometimes people complained that he did not put in sugar enough. A dealer in this city says that of his sales the plainly marked adulterated honey sells about four times as well as the pure. The real truth is that people don't know good honey from poor. The surest test of pure honey—solidifying or candying when standing in cold weather—is not observed in the adulterated, and a great many reject honey because of its solidifying. It is the old story of the woman who requested the milkman not to bring her any more milk which produced a scum after standing a while. The question is, who is going to stop adulteration under these circumstances?"

FIELDS FOR RAILWAY ENTERPRISE.

According to a recent report, "the field for railway building which the vast continent of Africa offers is destined to witness great activity. With an area of 11,500,000 square miles, or nearly four times that of the United States, omitting Alaska, and with a population of 168,000,000, the entire continent has only 8,000 miles of railways, against the 181,000 of the United States. The few lines that foreign enterprise has already built lie almost entirely near the extreme north or the extreme south coast, with a few miles on the west coast; while the vast interior is unpenetrated, and transportation on the dark continent, as a whole, is still being done on the backs of men. But the change has commenced. The construction of the Uganda Railway, a line 600 or 700 miles long, from Mombassa, on the Indian ocean, inland to the north shore of Victoria Nyanza, is decided upon. This road will open to the world's commerce a fertile country swarming with 20,000,000 people. Germany will not be much behind. Already it is announced that the government propose to build a railway from Dares Salaam, a point on the Zanzibar coast some 250 miles south of Mombassa, westward to Victoria Nyanza, with a line also to Lake Tanganyika, lying still further south of the equator. This enterprise means something like 1,000 miles of road. China also is preparing for a railway era. Three lines are, it is stated, already decided upon—from Pekin to Tien Tsin, 80 miles; from Pekin to Hankow, a distance of several hundred miles; and from Shanghai to Loochow, about 65 miles. Corea, the hermitland, is to seclude itself no longer, for an enterprising syndicate of Americans has been given the right to build a railway from Seoul, the capital, to Chemulpo, the chief port, and to work the minerals along the line; and other concessions have been granted to France and Russia. Long before the present century closes railway builders and operators, and the makers of railway supplies, will find large fields inviting their activities."

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, OCTOBER 31, 1896.

A contraction in the loan market was unavoidable in view of the manifestations of conservatism that the approach of the election appeared to develop in so many directions. The reduction of bank deposits and the desire to be in a strong position prior to the election resulted therefore in the decided stringency that appeared in the New York call loan market this week. With rates up to 75@100, as they were on Thursday, and with a general feeling in the stock market that it might become impossible to obtain loans on stock collateral, a liquidation commenced that might have had unpleasant consequences. In this emergency the leading banks of New York have again come to the aid of the market, and by combining to offer such funds as were absolutely required, but at the top rates, disorganization of one of the most sensitive portions of the commercial organization has been probably averted.

The closing week of the campaign has brought no indication of any change in the drift of public sentiment, which has, to all appearances, been setting steadily in the direction of a pronounced sound money success. With every day that passes the claims of the McKinley managers become more pronounced, and they are now counting confidently upon states which earlier in the campaign were thought to be reasonably sure for Bryan, and are talking about securing nearly three-quarters of the votes in the electoral college. The sound-money parade, which is to signalize the close of the campaign in New York city, bids fair to assume proportions larger even than at first supposed. It appears that now about 150,000 men will parade in case the weather should be favorable. The parade will consist of representatives of almost all the component elements of the business and professional community, and will be, in the event of good weather, the most imposing demonstration of the kind ever made in the United States.

Secretary Carlisle said in a speach delivered at Louisville this week that he had been accused of being unfriendly to silver, but he would say that if everybody was as friendly to silver as the Secretary of the Treasury there would be far more silver in circulation than there is at present. He said that the Treasury was continually paying freight on silver to distant points, but it kept coming back and could not be gotten rid of. In discussing the issues of the campaign he said that it was better to have an all-powerful Congress and President than to have a corrupt court. He said that should a dishonest administration come into power it could never be displaced, as it could so use patronage that it could hold on despite all patriotic people could do. As for himself, he was an American citizen, and was for his country first and party afterward. The root of all the present evil, Mr. Carlisle said, was the vicious legal tender paper known as Treasury notes, which would be succeeded by streams of gold should they be retired.

In addition to voting for presidential and state candidates this year the people of New York state will vote upon a constitutional amendment affecting the forest preserves of the state. The existing constitution provides that the lands of the state, now owned or hereafter acquired, constituting the forest preserve, as now fixed by law, shall be forever kept as wild forest lands, and shall not be leased, sold, or exchanged, *or* be taken by any corporation, public or private, nor shall the timber thereon be sold, removed or destroyed. The amendment proposes to exchange the "or" italicized above to "to," a change which is taken to import an intention to permit the leasing or sale of the lands so long as they are not taken by corporations. It further authorizes the leasing of lands within the forest preserve for camp and cottage purposes. This amendment has been denounced by the leading journals of the state, and by the principal bodies which have interested themselves in the preservation of the forests, on the ground that its adoption would result in the destruction of the state forests. The amendment should be defeated. The policy entered upon of guarding what remains of the forests of the country should be maintained.

The New York Court of Appeals this week rendered a decision of interest in a case involving the constitutionality of the Albany Bi-partisan Police bill. Under this bill it was provided that the Albany Common Council should elect four persons to act as police commissioners, not more than two of whom should belong to the same political party, and each member of the Common Council was restrained from voting for more than two commissioners. This act has been declared unconstitutional by the Court of Appeals, mainly upon the ground that the restriction of eligibility of the proposed police commissioners to members of the Republican and Democratic parties was a violation of the provision of the constitution which declares that there shall be no political test for holding office. The court held, however, that it does not follow that laws which merely require the local appointing power to so constitute boards as to be non-partisan or bi-partisan, are in conflict with the constitution, and that as long as the people have the benefit of the judgment and discretion of the local authority in making the selection from the citizens it may not be a fatal objection that they are restricted from selecting all the appointees from the same party.

In reference to the sealing question, to which attention has been recently directed anew, it is reported from Washington that the United States will have the support of both Russia and Japan in an effort to establish adequate protection for the fur seals of the North Pacific ocean. As has been already announced, a Russian official of distinction is here to endeavor to secure the adoption of a new treaty aimed at the regulation of the industry. The suggestion has been made that while Russia owned Alaska and the seal islands now attached to the United States there was complete protection to the seals, and that the destruction began under American management. The policy of Russia continues to be to protect the seals on the Russian islands of the North Pacific, and there will be full coöperation with the United States toward any concerted action to that end. So it appears the Japanese government stands ready to join the United States in any plan of seal protection, and is desirous, also, of including sea otters, which are being exterminated from the Japanese islands. The coöperation of Japan is said to be of much importance to the United States, as the seal poachers and pirates have fitted out mainly at Japanese ports. A large trade with them has been built up at Yokohama and Nagasaki. Notwithstanding this, Japan feels it to her interest to suppress the pirating.

By this time practically all the evidence bearing on the Venezuelan boundary dispute is in the possession of the commission which is in session at Washington. Professor Burr has brought over the results of his researches in Holland and England, and on Wednesday the commission received from the Governor of British Guiana a blue book dealing with the history of the boundary question, which is understood to complete the British case. The volume deals with the area of jurisdiction of the government of British Guiana, the posts and postholders, Indian captains, the Indian protectorate, the watershed of the Essequibo, and the Pomaroon district. This is the sixth volume which has been submitted in support of the British contention. As has already been stated, the understanding is that the commission will be ready to report about the time Congress convenes in December. It will, at that rate, have about a month to canvass the evidence on both sides and reach a final conclusion.

At present, according to Chief Constructor Hichborn's annual report, there are one hundred and ten vessels in the navy, of which thirty are armored, including eight battle ships, two cruisers, one ram, six double-turreted monitors, all of which are in active service, prepared for offensive or defensive operations, and thirteen single-turret monitors, which might be utilized in the harbors in which they now lie. Three other armored battle ships are now under construction. There are twenty-five new steel cruisers also in commission, in addition to the three special class vessels of the new navy—the Bancroft, Dolphin and Vesuvius. These are unarmored, as are the sixteen iron and wooden cruisers and six wooden sailing vessels still carried on the lists. Three torpedo boats are in use and fifteen under contract. The other vessels building are six gunboats, one submarine boat and fifteen torpedo boats.

The only new vessels which Congress is asked to authorize are two composite sailing vessels of 1,100 tons, costing $500,000, as practice cruisers for the Naval Academy, to take the place of the Bancroft. The recommendation for the construction of these vessels is not intended to conflict with the recommendation for three additional battle ships which Secretary Herbert is expected to make in his annual report. During the fiscal year nine vessels—the Indiana, Massachusetts, Oregon, Maine, Texas, Terror, Monadnock, Katahdin and Ericsson—were added to the effective force of the navy, and during the current year the Brooklyn, Iowa, Nashville, Wilmington, Helena, Puritan, six gunboats, seven torpedo boats and one tug are to be added. It appears that the naval stations and docks at Port Royal, S. C., and Port Orchard, Wash., cannot be properly utilized without the erection of shops, for which authority is asked. The major part of the report is devoted to exposing the shortcomings of the reserve supply system.

THE OUTLOOK FOR WHEAT PRICES.

There need be no fear that the price of wheat is likely to react to and remain at the lower levels which prevailed for so many months prior to the recent advance of about 22c. per bushel.

The price has, to be sure, declined sharply. In fact about one-half the gain mentioned has been lost. This is due in part to a sudden cessation of demand abroad, in the face of temporarily abundant supplies called out from exporting countries, notably in the United States, by the rapid advance of quotations. The sudden upward movement of the price also suggested the realization of profits by large holders of wheat, and, as in almost all similar instances, the sudden and extreme upward swing of the pendulum was followed by a return movement of some extent.

The cause of the advance of prices has been pointed out in this and other newspapers so often as to hardly call for repetition, yet it may be well to enumerate the short crop in Russia, expectations of a greatly reduced supply in India, a smaller crop in Argentina, and perhaps only an average crop in the United States. Various so-called authorities have estimated the decrease in the world's yield of wheat in 1896, as compared with 1895, at 150,000,000 bushels, and Beerbohm places this year's shortage, as contrasted with the world's average annual yield from 1891 to 1895, inclusive, at 136,000,000 bushels. The English expert gives the following summary of the causes of the recent rise in wheat values:

> First there was an impression that the world's crop would prove to be a comparatively light one—since confirmed to a great extent; then came more decisive reports of a deficient crop in Russia and America; then followed the sharp rise in freights and the fears of famine in India, and now, finally, we are confronted with the probability of a more or less serious failure of the Australian crop. Under these circumstances it will be seen how much depends upon the success or failure of the next Argentina crop. The question of how much wheat India may import is, of course, impossible to answer; but it is a serious matter when a country which consumes usually about 25,000,000 quarters of wheat per annum suffers from a failure of the crop of the nature which seems in prospect this season.

We have been asked to give a record of the world's crop since 1873, the year when France and other countries cast off silver. This may be found interesting, and is as follows [in quarters of eight bushels each], divided into quinquennial periods:

WORLD'S WHEAT PRODUCTION.

	Quarters.		*Quarters.*
1896	290,000,000	1885	200,000,000
		1884	280,000,000
1895	309,000,000	1883	253,000,000
1894	320,000,000	1882	278,000,000
1893	308,000,000	1881	245,000,000
1892	201,000,000		
1891	298,000,000	Five years' aver.	263,000,000
Five years' aver.	307,000,000	1880	245,000,000
		1879	232,000,000
1890	283,000,000	1878	250,000,000
1889	268,000,000	1877	245,000,000
1888	278,000,000	1876	217,000,000
1887	284,000,000		
1886	270,000,000	Five years' aver.	238,000,000
Five years' aver.	276,000,000	1873	221,000,000

We should explain that for the last ten or twelve years the above figures are compiled almost entirely from official returns; in previous years we have had to rely to a greater extent upon commercial estimates. In putting the present season's production at 290,000,000 quarters we have allowed 9,000,000 quarters for Argentina, against 6,500,000 quarters last year, and 3,500,000 quarters for Australia, against about 3,000,000 quarters last year.

Additional price influences are found in the reported poor crop of potatoes in the United Kingdom and on the continent of Europe which is expected to tend to increase the demand for wheat in England, France, Holland and Germany.

That there will be enough wheat to go around goes without saying, and it is entirely possible that the alleged shortage in Russia has been magnified and the prospect for a decreased yield in Argentina overdrawn. In fact, the London *Miller* estimates the total requirements of wheat-importing countries at 22,000,000 bushels less than total export supplies of wheat in exporting countries—a pretty narrow margin, though on the right side.

But when the most has been told with respect to the outlook for ample supplies of wheat, the fact remains that after four or five years of excessive output the yield fell away in 1895 and has declined again in 1896, this time more sharply; that supplies in importing countries have been allowed to run down, and, most important of all, that importing countries have been first to discover the outlook for reduced supplies and for higher prices themselves. The late "boom" did not start in the United States, but in England. The London *Economist* concludes that wheat is likely to be higher rather than lower, and that there is a real deficit in the world's wheat crop. For the first time, perhaps, since 1879 America now appears to hold the key to the situation, for every bushel of wheat in the United States available for export will be wanted abroad.

The domestic crop, recently estimated on the basis of the Agricultural Department report at 412,000,000 bushels, is now said by students of the government report to be likely to amount to 435,000,000 bushels. Against this it is argued that an 80,000,000 bushels shortage in the leading spring-wheat states means just that much less wheat produced this year than last. There are prominent millers, elevator men and others who argue from the foregoing that the 1896 domestic crop amounts to only about 387,000,000 bushels—because the government reported a total crop last year of only 467,000,000 bushels. To be sure, statistics of the distribution of the 1895 crop point to it having been nearer 500,000,000 than 467,000,000 bushels, but the authorities referred to do not seem to place any weight on that. But if we presume that the 1896 crop is only 400,000,000 bushels, as so many in position to judge have declared, and add to it 60,000,000 bushels available from the quantity carried over on July 1, 1895, we find a grand total for use at home and abroad of 460,000,000 bushels. Of this, 378,000,000 bushels are estimated as needed at home for food and seed, leaving only 82,000,000 bushels for export, to June 30, 1895. We have already exported about 55,000,000 bushels, leaving only 27,000,000 bushels to ship out of the country during the next eight months, about 750,000 bushels per week, about one-fifth what we are now shipping weekly. If this situation were generally appreciated or believed "dollar wheat" would soon be a reality. Do our extremely bullish friends in the northwest believe the domestic wheat supply is as short as this?

The price of wheat will probably have to advance above recent high levels, even if the crop is 450,000,000 or more, which is not unlikely.

BOND SALES AND THE GOLD STANDARD.

The fact that the government found it necessary to make sales of bonds during the last couple of years, and the circumstances connected with these sales, have furnished the basis for some of the most vigorous criticism put forth by the advocates of the Chicago nominees, and it is probably true that their line of argument upon the question has not been without effect in certain quarters where the situation leading up to the bond sales has not been understood in its true light. A clear statement of the subject, particularly in its relation to the question of the gold standard, which has been prepared by Professor F. W. Taussig, of Harvard University, for the November *Forum*, will therefore prove of interest, in view of the fact that the matter is dealt with not in a polemical but in a scientific spirit.

Professor Taussig says that as a matter of fact the bond sales have nothing whatever to do with the gold standard in itself, but are the final outcome of a series of legislative experiments reaching a long way back into the past, and are the consequence not of the maintenance of the gold standard, but of the fact that the gold standard has failed to be consistently and effectively maintained, and that in the immediate past they have been due quite as much to the endeavor to force the country to a silver basis as to the endeavor to keep it on a gold basis. In making clear the grounds upon which this statement is made the writer reverts briefly to the history of the divorce of the Treasury from banking, brought about by the establishment of the Independent Treasury system and the circumstances, particularly those growing out of the civil war and the resumption of specie payments, which have involved the Treasury in the financial machinery of the country and made it the largest issuer of paper money in the world, and have saddled it with the redemption of this great mass of paper money.

Attention is directed to the fact that the obligations put upon the Treasury by the peculiar manner in which resumption was effected were further increased by the silver issues of 1878 and 1890. The struggle between sound money and depreciated money took a new form after 1875, it being no longer a question whether the paper money of the country should rest upon specie, but on what kind of specie it should rest. The old inflationist movement was adroitly turned into the silver channel. The Resumption act involved a compromise and the subsequent measures referred to were compromises. The issues under the act of 1878 were virtually paper money resting on a gold basis. Another monetary accumulation was provided by the act of 1890, the issues under which were legal tender redeemable in coin, but with a pledge for the maintenance of a parity between silver and gold. The repeal of the purchase and note issue clauses of the act of 1890 put an end at last to the growth of the money which the Treasury was obliged to keep equal to gold, but its amount had swelled to great dimensions.

While, now, the responsibilities of the Treasury have grown greatly, it remains still nominally the independent Treasury of 1846. There is no distinction between its simple fiscal functions as the depository of public receipts and the disburser of public payments and its more complicated functions as the issuer and supporter of more than a thousand millions of paper money. Its assets serve indifferently to pay the current expenses of the government and to redeem paper money when presented for payment. If it happens to have an excess of tax receipts over ordinary payments it is by so much in a stronger position as a bank of issue, while if its ordinary payments are greater than its inflowing tax receipts its cash on hand, that is, the supply of gold which constitutes its reserve as a bank of issue, must meet the deficiency. The dangers and anomalies of this situation are increased by the fact that the national revenue is derived in largest part from the tariff, and fluctuates with the ups and downs in imports which take place under any tariff system. Under the circumstances confronting the present administration, the significant thing, in Professor Taussig's view, is not that the Treasury should have had to make strenuous endeavors to maintain the gold standard, but that, with all the difficulties, the gold standard should have been successfully upheld.

Professor Taussig does not deem it profitable to go into a discussion of the relative degrees of party responsibility for the situation which made the bond sales necessary, but he points out that the embarrassments under which the administration has labored in effecting them have been greatly increased by the silver party. The government, owing to the failure of Congress to authorize short-time loans at a low rate of interest, has been compelled to resort to the antiquated forms of borrowing authorized in 1875, and he deems it just to say that, considering all the circumstances of the case, the Treasury administration has not only shown great courage and a high purpose, but has succeeded in overcoming difficulties well-nigh insurmountable. If, instead of compromising, we had settled our currency simply and definitely on a gold basis fifteen or twenty years ago, the bond negotiations would not have been rendered necessary. Our recent and present embarrassments have been, the writer says, our own fault, and are not any necessary or natural concomitants of the gold standard. We must come to a real and final settlement of the question what is to be our monetary standard, and, as one of the incidents in that settlement, we must completely overhaul our present currency system. The government paper, Professor Taussig suggests, should be reduced in volume, or, if possible, should be got rid of entirely; but if the Treasury is to remain an issuer of paper money, it must have that function completely separated from its mere fiscal duties.

THE WESTERN RAILROAD AGREEMENT.

Further information confirms the impression that the new association of the railroad lines west of Chicago, which is to replace the old Western Traffic Association, is a step far in advance of any that the roads of that section have heretofore been able to take. In fact, the agreement that was ratified last week is fully expected to produce as much positive good as the Joint Traffic Association has done for the trunk lines. The roads have suffered so much and so unnecessarily in the past from reckless rate cutting that the owners of the various properties appear to have determined to put a stop to it for once and all.

The final agreement for the new association was made at Chicago last week. The general features of the plan of operations are pretty much as stated in the last issue of BRADSTREET'S. It may be noted, however, that the territory to be covered by the new association does not extend west of the Missouri river. Its jurisdiction will comprise points between Chicago, St. Louis, the Missouri river and St. Paul; or, in other words, practically the same territory covered by the old Western Freight Associa-

tion. The governing board, which will consist of five members, is a most important part of the machinery. Its members will represent Chicago, St. Louis, Kansas City, Omaha and St. Paul interests, respectively, and the board will be in session daily. It will, furthermore, have full control of rate making and the division of tonnage as far as such action can be had with due regard to existing laws. For the division of tonnage and traffic a unanimous vote of the board is required, but other propositions will be carried by a four-fifths vote. The agreement, however, also provides for an executive board, composed of the presidents of the various roads or their representatives. This body can be called in session by the chairman or on the request of three members. All questions which fail in action in the subordinate governing board shall be referred to it for consideration and action. The penalty for infraction of the rates fixed by the association is to be not less than the gross earnings on the traffic involved in such cutting of rates nor more than $2,500 for each offense. There is to be no money deposit for payment of such penalties, but the executive board shall fix the amount in each case of violation of the agreement brought to its attention, the amount of the fine being devoted to expenses of the association. A further provision is that the two boards shall in all possible ways coöperate with the federal and state railroad commissioners in securing stability and uniformity of rates and the suppression of underhand cutting and infractions of the law for the benefit of favored shippers.

This plan, it will be observed, does not include, as was expected, the direct participation of boards of directors of the various companies. Those bodies are to retain the power to make rates, or rather to order reductions, but the belief is that it is a power that will be very sparingly exercised, and only under the most extraordinary circumstances. The feature of the entire arrangement is that it introduces an element of permanency in the rate-making power. It is hardly needful to reiterate the old and well-known fact that the lodging of this enormous power in the hands of the general managers of the various roads is the great cause of rate wars and rate cutting. In other words, all the roads in the past, no matter what form of organization was attempted for the regulation of the business, retained the right to independent action, and exercised it through their minor officials. The present agreement is a step in advance, because it does away with this completely and centralizes the work of rate making, so that in the future it will be considered not with reference to the individual interests of each road in the light of the general interest of the associations. It must, of course, be admitted that a great many and very serious obstacles will have to be encountered owing to the long-continued demoralization that has existed in the operations of western roads and the natural inclination of officials trained in such a school to resort to the old methods of retaliation and reprisal on the slightest indication that their competitors were acting adversely to their interests, or what were supposed to be their interests. The experiment, however, will be watched with great interest, and not a little good is, as already stated, expected to result from it in the near future, particularly as the wheat-carrying roads must face a period of slim traffic.

IS NEW YORK'S COMMERCIAL SUPREMACY THREATENED?

A recent issue of the New York *Evening Post* contains an article on the increased and increasing competition of Atlantic and gulf ports with New York. There is little that is new in the statement that discriminating freight rates are hurting the commerce of New York, but some of the propositions stated in the letter have the merit of novelty. Particularly is this the case with regard to the opening paragraph, which says:

> With eight or ten trunk lines centering in New York, with the greatest water-way in the world, supplementing the finest system of internal navigation terminating in her harbor, and with a tonnage at her docks unequaled in average size and form, and to a greater variety of ports than elsewhere—with all this he would have been a brave man who ten years ago would have predicted that Boston, the commercially despised Boston, would in 1895 ship more food products to Liverpool than New York. Yet such was the fact. He would have been equally venturesome had he predicted that in 1895 the harbor of Montreal would receive for foreign shipment more flour from the "Head-of-the-Lakes" than did New York, while in 1896 the shipments showed a remarkable increase. This circumstance justifies the statement, of serious import to this city, not long ago made by Sir William C. Van Horne, that he could transport a barrel of flour from the dock in Montreal to the dock in Liverpool at a less rate than it costs to handle it in the harbor of New York.

At first sight the statement in relation to Liverpool seems rather startling. But it is to be recalled that Boston's superiority in shipments of foodstuffs does not extend to all parts of the United Kingdom and the continent of Europe. The Bureau of Statistics report for the fiscal year ending June 30, 1895, shows an aggregate total value of shipments from New York of live cattle, breadstuffs, beef, pork and dairy products of $125,000,000, against total similar shipments from Boston of less than $60,000,000, an excess in favor of New York of $65,000,000, over 100 per cent. Boston, it should also be recalled, is the most formidable competitor of New York in the shipment of food products.

It is not, however, from Boston or Montreal only that competition is dreaded. The establishment of a winter port at St. John, N. B., from which flour milled at Duluth may be shipped abroad at a cheaper rate than it can be shipped via New York, in spite of the one-third less of railroad haulage, is cited as a source of competition to the north and east of New York, while to the southward Galveston, New Orleans, Baltimore, Newport News and even Philadelphia are instanced as rapidly growing competitors. Among the instances given are the establishment of a direct line of steamers between Galveston and Hamburg, which is expected to share in the western grain and packing-house products export trade because of the cheapness of transit, the freedom from port charges, the easy downward grade to the sea and shortness of the distance.

The completion at New Orleans of terminals costing $2,000,000 by the Illinois Central railroad is an additional example of the efforts which are making to divert grain and other western products for export from the Atlantic to the gulf. It is also mentioned that sugar can be freighted from Germany to Chicago via Newport News cheaper than from New York to Chicago by any railroad line in the Joint Traffic Association. Norfolk, it is also said, threatens the supremacy of the Empire City, and is likely to become a very important shipping point for southern cotton and northwestern grain; Baltimore "has become one of the greatest rivals of New York, possessing terminals costing millions, with facilities for the occupation of which the most strenuous efforts are made," and even Philadelphia is becoming a rival of the metropolis in the shipment of flour. The success of all these rival ports is attributed to the fact that all possess facilities for the prompt and free trans-shipment of freight directly from the cars on the wharf, or the elevator at the water side, to the ship lying in the dock beside it; whereas, in New York, the lighterage charge is 60c. a ton, and "because of our great geographical disability three-fourths of the products that reach this port are received in one city, stored in another city, and shipped in still another city; received in Jersey city, stored in Brooklyn and shipped in New York."

The claim is further made that of a total increase thus far this year of 52,000,000 bushels in the amount of corn exported New York received only a little over 1,000,000 bushels.

The remedy is briefly summarized as follows: First, the reduction of rates on east-bound freight to an equality if not to a lower level than prevails to the other ports; and, second, a reduction if not a total obliteration of the heavy port charges said to prevail at New York.

Illustrating the position of the leading Atlantic and gulf ports in the handling and shipment of food products the following table, compiled for BRADSTREET'S, will be found of interest. The figures express the values of the exports of food products from the ports named during the fiscal year ending June 30, 1895:

	New York.	*Boston.*	*Baltimore.*	*Phil'a-delphia.*	*Newport News.*	*New Orleans.*	*Galveston.*
Animals	$13,813,550	$11,862,035	$5,194,465	$1,563,330	$1,615,305	....	....
Breadstuffs: Corn	4,225,248	1,300,496	2,505,499	730,094	1,754,781	$1,303,442	...
Wheat	13,166,259	3,003,861	4,506,461	2,324,003	1,756,183	1,167,200	$29,930
Wheat flour	19,006,385	7,398,031	8,510,458	3,497,581	3,732,696	338,796	233,442
All others	2,168,385	444,556	200,989	106,116	131,536	22,283	5,583
Beef products	13,640,768	8,182,130	3,635,443	972,349	41,807	23,944	....
Hog products	54,566,387	27,130,622	9,739,936	3,178,603	718,492	148,591	....
Dairy products	4,752,015	489,581	1,145	....	....	38,036	....
Totals	125,358,997	59,812,212	34,294,396	12,372,076	9,750,800	3,042,292	268,955
Totals mdse exports	325,580,062	85,505,196	61,938,991	35,043,093	13,469,541	68,413,362	41,886,651

During the fiscal year 1895 the Atlantic and gulf ports combined exported 89 per cent. of all the domestic merchandise shipped from this country. New York alone handled 40 per cent. of the export trade, Boston coming next with 10 per cent., New Orleans with 8.4 per cent., Baltimore with 7.6 per cent., Galveston with 5.2 per cent., Philadelphia with 4.3 per cent., and Newport News with 1.6 per cent. It may also be worth noting that New York in 1895 handled almost exactly the same proportion of the country's export trade in merchandise that it did in 1891, and that in spite of the increased competition from other ports New York in 1895 handled a larger proportion of food products exported than all the other ports named in the table combined.

THE NEW YORK & NORTHERN MUDDLE.

A decision rendered last week by the Court of Appeals of this state in connection with the former New York & Northern Railway (now the New York & Putnam and a part of the New York Central system), has aroused a great deal of attention both in legal and financial circles. Not only does it leave the railroad property that is the object of the litigation in question in a strange situation, but the decision involves principles which, if applied in other cases where railroads have been reorganized and minority stockholders wiped out under reorganization plans, might have far-reaching consequences.

The facts of the matter are that the New York & Northern was acquired in 1893 at a foreclosure sale, under its second mortgage, by a prominent banking firm in this city, and after reorganization as the New York & Putnam was transferred to the New York Central, which has since operated it as a part of its own system. The capital stock of the old company consisted of $3,000,000 common and $6,000,000 preferred stock, a total of $9,000,000. The second mortgage bonds amounted to $3,200,000, interest on which had been in default since 1892, and the interests which instituted the reorganization and foreclosure purchased the property at the sale and transferred it to the New York Central were the owners of a majority of the stock and $2,000,000 or so of the second mortgage bonds. The company, it is claimed, offered no substantial defense to the application of the trustee under the second mortgage for a decree of foreclosure, but the representatives of a minority interest (of about $2,000,000) in the stock appeared before the granting of the decree of foreclosure and asked leave to interpose a defense. This application was finally allowed, and the case proceeded to trial, resulting in a judgment against the company and a foreclosure, as already stated.

The minority stockholders, though defeated in the Supreme Court, carried the case to the Court of Appeals, alleging that on the trial much if not all of the important evidence they offered had been improperly excluded. The substance of these allegations was that the acquisition of a majority of the stock and of the second mortgage bonds was effected in pursuance of a plan to secure the control of the property for the New York Central, that a management was installed which was not duly effective in saving the New York & Northern from default, that the road was a parallel and competing line of the Central, and that it was prevented from obtaining connections and business that would possibly have enabled it to meet its obligations to the bondholders. It seems that the highest court of the state has sustained the contention that the exclusion of such evidence was an error, and has awarded a new trial of the foreclosure suit to the minority stockholders.

This action of the Court of Appeals leaves the property itself in a strange position. The majority interest, considering that the result of the first trial and the judgment then obtained settled the matter, went ahead in full confidence and purchased it for their claims at the foreclosure sale, the New York Central road purchasing the property from them under the same impression. It was urged that pending a new trial the title to the property is in doubt, though it is confidently urged that the amount at issue, so far as regards the

claims of the minority stockholders, is comparatively small, and that a settlement with them will be next in order, the effect of which would be to quiet all doubts as to the immediate ownership of the road. It should also be noted that the matter, whatever interest its general bearings may be, has had no effect in the stock market, nor has it been in any way twisted into a bear argument against the New York Central Company. Moreover, the charges of fraud and combination by the majority holders are of course of a technical character.

The decision, however, may be looked on with reference to its bearings on railroad reorganizations in general. It is claimed that it sustains the rights of minority stockholders in corporations as against abuses by majorities, and is the first case in which the New York courts have gone so far in laying down the law. In fact, the Court of Appeals enunciates the principle that there are circumstances under which the majority stockholders occupy substantially the same relation of trust toward a minority as the board of directors would occupy toward the stockholders it represents.

WORLD'S INCREASE IN YIELD AND EXPORTS OF WHEAT.

Following close on the heels of BRADSTREET'S outline of the course of the world's export and import movement of wheat, published in connection with a chart of prices last week, the United States Agricultural Department makes public an interesting report of the course of wheat production and exportation in the United States, Canada, Argentina, Uruguay, Russia and India from 1880 to 1896.

The following table shows by five-year periods the average annual yields of wheat in each of the countries, "so far as reliable figures could be obtained, from 1881 to 1895, inclusive:"

AVERAGE ANNUAL PRODUCTION OF WHEAT, BY QUINQUENNIAL PERIODS, IN SIX OF THE PRINCIPAL WHEAT-EXPORTING COUNTRIES.

	Bushels		
Countries.	1881–85.	1886–90.	1891–95.
United States	435,685,744	443,847,400	490,246,218
Canada	39,200,000	36,294,636	51,405,800
Argentina	*a* 13,000,000	22,300,000	61,600,000
Uruguay	*b*	*b*	6,143,000
Russia	*c* 224,106,611	233,400,988	301,406,600
India	*c* 269,721,362	245,657,238	224,909,600

a Annual average for the two years 1884–85. *b* No statistics available. *c* Annual average for triennium 1883–85.

Waiving any desire to alter the argument of the government report based on the foregoing totals, BRADSTREET'S nevertheless suggests that known and estimated data of distribution of the domestic crops of wheat from 1891 to 1895, inclusive, make it plain that the average annual production of wheat during the past five years was at least 537,000,000 bushels, rather than 490,000,000, as given in the government compilation, an average annual increase of 47,000,000 bushels above the Department totals.

The averages presented above, especially when supplemented as explained, show a very decided increase in the wheat production of the United States, Canada, Argentina and Russia during the last fifteen years, "and a similar growth would undoubtedly be shown for Uruguay were statistics obtainable for the entire period." India is the only one of the six countries which suffered a decline.

The subjoined figures show the average annual exports of wheat, including wheat flour, from each of the above-named countries during the five-year periods indicated. In preparing this table "the quantity of wheat flour exported was converted into its equivalent in grain at the rate of 4½ bushels of wheat to a barrel of flour weighing 196 pounds, and then added to the exports of grain. The statistics quoted for Canada and Uruguay represent the net exports, i. e., the excess of exports over imports. The imports of wheat into the other four countries are so small that they are not taken into account. In Argentina, Uruguay and Russia the commercial years coincide with the calendar years. In the United States and Canada they comprise the twelve months ending June 30, and in India the twelve months ending March 31. The figures given for the three last mentioned countries are for the commercial years ending in the calendar years subsequent to those named." The table is as follows:

AVERAGE ANNUAL EXPORTS OF WHEAT (WHEAT FLOUR INCLUDED) FROM SIX PRINCIPAL WHEAT-EXPORTING COUNTRIES.

	Bushels		
United States.	1881–85.	1886–90.	1891–95.

Totals	34,580,707	31,375,542	29,251,323

a Net imports.

The foregoing indicates the remarkable growth since 1880 in the volume of wheat distributed by some of the more important wheat-exporting countries. The average yearly export of wheat, both grain and flour, from the United States during the three quinquennial periods from 1881 to 1895 increased about 40 per cent., and Russia, whose exports of wheat rank next to those of the United States in volume, made a gain nearly equal in rate. The exports of wheat from Canada, although rather unimportant when compared with those from the United States and Russia, show a growth which is proportionately even more rapid, the average net shipment per annum having more than trebled since 1881–86.

But the most striking growth in wheat exportation is exhibited by Argentina and Uruguay. The average annual wheat exports of Argentina increased from about 2,000,000 bushels in the period 1881–85 to nearly 35,000,000 bushels in 1891–95, while in the same space of time Uruguay's net exports per annum advanced from about 77,000 bushels to more than 1,600,000 bushels. India alone of the countries named shows a diminished wheat export trade, a natural result of declining production. The aggregate quantity of wheat exported from the six countries combined during the five-year period 1881–85 averaged about 238,000,000 bushels per annum, while in the period 1891–95 the yearly average export amounted to about 352,000,000 bushels, or a total gain of 114,000,000 bushels.

The maximum of both area and production in the United States was reached in 1891. "Since that year there has been a considerable diminution in area and product, accompanied by an even greater falling off in the quantity of wheat exported, the total shipments of grain and flour during the fiscal year 1895–96 amounting to only 129,000,000 bushels, as compared with 228,000,000 bushels in 1891–92." Exports of wheat fell off much more rapidly than those of flour, the latter showing only a slight decrease during the five years.

The crop year 1891 was an unusual one in several of the great wheat-growing countries. "Coincident with the largest wheat production ever recorded for the United States there was a partial or total failure throughout much of Europe. The Russian crop was exceedingly light and resulted the following year in greatly diminished exports. Since this temporary setback, however, Russia has more than regained the lost ground, and the last few years have witnessed a rapid growth in exportation as well as production. Canada, like the United States, produced her largest crop in 1891. Her net exports increased in the fiscal years 1892, 1893 and 1894, but have since declined. The exports of wheat from British India reached their maximum in 1891–92, the years subsequent showing a falling off which has greatly lessened India's importance as a contributor to the world's wheat supply. Her shipments during the past year (1895–96) amounted to only 20,000,000 bushels, as against 58,000,000 bushels in 1891–92. In Argentina and Uruguay the progress made in wheat raising during the last few years has been almost phenomenal. The Argentine crop increased from 36,000,000 bushels in 1891 to 75,000,000 bushels in 1895, and during the same period the remarkable gain of from 15,000,000 to 40,000,000 bushels (wheat and flour) was made in exportation. Uruguay's crop, which amounted to less than 3,000,000 bushels in 1891, advanced with such rapidity that in 1895 it was returned at about 10,000,000 bushels. In 1891 the imports into Uruguay exceeded the exports, but 1894, the latest year for which the trade returns are available, shows an excess of nearly 6,000,000 bushels (wheat and flour) in favor of the exports."

WAGES AND PRICES IN FOREIGN COUNTRIES.

In July last the Secretary of State sent instructions to the diplomatic and consular officers of the United States in foreign countries requesting from them a brief account of the nature of the standard of value, the total amount of money in circulation, the circulation per capita, the practical effect of the existing currency on manufacturing industry and the rates of wages for labor, statistics of prices, and whether the mints of the countries investigated are open to the coinage of either or both metals, the mint price for gold and silver per ounce fine, and whether the price has varied since 1886. The results of the investigation thus initiated have just been presented in a volume of 274 pages, in which the information for each country is presented in detail with relevant statistics.

In the summary of these findings, prepared by the chief of the Bureau of Statistics of the State Department, it is set forth that two important facts are established by the investigation. In the first place, it is shown that there has been a general decline in the prices of commodities, especially in certain raw products, throughout the world. It is claimed, on one hand, that this decline in prices is due to scarcity of money, and, on the other hand, that it is to be attributed to progress in invention and increased production, both of raw materials and manufactures, causing keener competition, with the inevitable accompaniment of lower prices.

In Mexico prices have been steadier for articles which could be most profitably exported for gold, and sharp fluctuations, due to local scarcity of product, have occurred in such articles as wheat and corn, in which the prices have been generally downward in the markets of the world. In the next place, there has been a general advance in wages, especially marked in the leading industrial countries, all of which have either a single gold standard or a double standard with a gold reserve.

A summary of the information supplied for the several countries included in the investigation shows that Great Britain, which maintains the single gold standard, exhibits a general decline in prices of 9 per cent. and an advance in wages, except farm wages, which are lower. In Belgium, which maintains the double standard, there has been a decline in prices with no change in wages.

France, with the double standard, shows a decline in prices, except beet sugar, and a slow, regular advance in wages. Germany, with the single gold standard, shows a decline in cereals, pork and certain raw products, an increase in beef and many lines of manufactured goods and a general advance in wages. Austria, with the gold standard and limited silver, shows a general decline in prices, advance in wages. Italy, with the double standard, shows a general decline in prices, especially food products, general advance in wages, especially in the case of farm labor. Mexico, with a nominally double standard, but actually silver, shows no change as to food products not exported, advance in price of imported articles and coffee, meat and sugar. Unskilled labor is unchanged and there was an advance in skilled labor. Costa Rica and Colombia, with the silver standard, show an increase in prices, and an increase in wages, as measured in silver and paper. The United States shows a general decline in prices, with a general advance in wages up to 1892. The latter statement is based upon the Senate Finance Committee report to the Fifty-second Congress.

SILVER IN CHINA.

Reference has already been made to the memorandum in regard to proposed changes in Chinese tariff rates which the Chinese Viceroy, Li Hung Chang, left with Secretary Carlisle in an interview with the latter in the course of his visit to the United States. The text of the memorandum has since been published, and a more detailed reference to it has become practicable. The memorandum sets forth that when treaty relations were first entered on in Tao Kwang's time a tariff was established for the collection of duties on imports and exports, and the amounts to be paid were expressed in silver taels. Treaties were again negotiated in Hien Fung's time, and the tariff was revised, but, although various changes were introduced, the tariff remained much the same as before, and the silver tael was again the designation used for the money in which duties were made payable in China. In determining the number of taels or fractions of taels to be inserted as the duty to be paid by any specified commodity, what the foreign negotiator chiefly had in view was a certain fixed amount in foreign coin, with which the tael amount was then supposed to accord. Since those days, however, the memorandum continues, silver has been changing its character; it can no longer be said to hold the same position as money, and it is not only more and more becoming an ordinary item among the many items of merchandise, but is less and less valuable as compared with all other items, so that the tariff silver tael of to-day no longer retains the exchange value it showed when tariffs were first arranged,

In the time of Tung Chin three customs taels could purchase the equivalent of an English pound sterling in all money markets, but during the last twenty years it has gone lower and lower, so that now it takes from six to seven taels to purchase £1 or its money equivalents, thus causing a loss to China of from 50 to 60 per cent.

At first, it is pointed out, the depreciation was comparatively trifling, and was supposed to be the result of some temporary derangement which would soon right itself; but not only has depreciation continued, but increased, and it is now evident that silver is no more what it was, and that the tariff unit, the Haikwan tael of to-day, is not now what it was intended and ought still to be, the third of a pound sterling. This fact of itself, it is said, is enough to justify action in the matter, but other circumstances have come into existence which make action imperative. During the last twenty years China has established legations abroad, has been purchasing machinery, building ships, initiating various works involving long and continual expenditure abroad, and has been going to the foreign money market for loans, which have to be expressed in pounds sterling or the equivalent, and all this time the very same money which China has been receiving for duties, as if three customs taels still made a pound, has had to be paid out to foreigners at the rate of from six to seven taels for every pound. The loss is great; it is becoming too great to be silent about; it is making itself felt to too serious an extent to be borne, and both the necessities of the day and considerations of what is fair and right demand that the original value of the customs tael be reënunciated, and that the value of silver at which China consented to collect duties, viz., three taels to the pound, be observed and adhered to.

The matter, the memorandum continues, is not one requiring either revision of treaty or disturbance of tariff, and, as a matter of fact, the tariff, as a whole, is so light that to require its application in sterling not only accords with its fundamental idea of ad valorem duties, but can be no hardship to anybody, while it is, besides, what China is entitled to. But in order to avoid the inconvenience and unexpected changes, the relative value of the tariff tael and the pound sterling ought to hold good, say for a whole year, for revenue purposes, and ought to be fixed and published in advance. Hitherto 1,000 customs taels have equaled 1,114 Shanghai taels, and when the tariffs were negotiated their equivalent in gold was £333 6s. 6d.; that is, while one customs tael equaled 80 pence, the Shanghai tael equaled 71¾ pence; but the average value of the Shanghai tael during the last twelve months has been per tael not quite 36 pence, and accordingly there has been a loss of 36 pence on every Shanghai tael paid as duty.

The arrangement proposed for 1897 is as follows:

(A) Duties may be paid in gold, in sycee, or in foreign coins.

(B) If paid in gold, one gold pound remains, as at first, the equivalent of three customs taels; fractions to be calculated accordingly.

(C) If paid in sycee, 2,228 taels of Shanghai sycee are the equivalent of 1,000 customs taels; fractions to be calculated accordingly.

(D) If paid in foreign coins, then as much of them as will suffice to buy a proportionate quantity of Shanghai sycee equal to the customs taels payable; fractions to be calculated accordingly.

In this way the figures of the existing tariff will stand untouched; goods will pay according to the customs tael and at its original rate; the customs tael and the gold pound will stand in the same relation as before. Commencing thus with 1897 the rate for every subsequent year will be published six months in advance, so that all may know beforehand and inconvenience be avoided.

WARRING EUROPEAN COLONIAL POLICIES.

The feeling aroused in England on discovering the frequency with which articles marked "made in Germany" are being offered for sale is supplemented by a feeling of jealousy at the success of the German empire in its recent aggressive colonial policy. One English newspaper in commenting says: "It is quite as much as Germany can do to support her present population, and she would be very sorry if any considerable proportion of her people, who now make a comfortable living over here, were to be returned to the place from whence they came, owing to the existence of seriously strained relations between the two countries." The same paper thinks that English success as a colonizer has furnished "a text for German invective," and German newspapers are said to have held the British up to public reprobation as unprincipled land grabbers—"as if the 'earth hunger' were unknown in the Fatherland."

Reference is made to a recent article in the London *Times*, entitled "Twelve Years at Land Grabbing," in which the colonial policies of various European nations were compared, and the point is made that England has been compelled to increase its colonial possessions in the last twelve years "principally to safeguard" what it "already owned," owing to the "sudden access of colonizing zeal displayed by Germany in 1884."

It is explained that in proportion to the size of the territory which England possessed before 1884, it has not enlarged its colonial area with anything like the rapidity of France, Germany, Italy or Belgium. In 1884 its colonial possessions covered 8,409,000 square miles. France had 665,000 square miles, while Germany had not a foot of ground outside Europe. "To-day the French colonies cover 3,391,000 square miles, the Germans have added 1,023,000 square miles in Africa and the Pacific, and we have acquired about 2,600,000 additional square miles, while the Congo Free State represents 1,000,000 square miles for Belgium." An empire of 11,000,000 square miles beyond the seas is, no doubt, an extraordinary result to have been achieved by a mother country "which has an area of only 120,000 square miles."

Yet the day is said to have passed when the British colonies can be regarded as a drag on the mother country, as shown by the fact that the French and Germans have endeavored to follow British example.

Thus, to explain the large acquisitions by the British in Africa, the plea is made that "when Germany developed the bump of acquisitiveness in East Africa, Southwest Africa and the Cameroons, it became imperative for us to secure our own possessions in those parts of Africa; and, in order to properly safeguard them, to maintain access to the coast, and, generally, to prevent them being shut in and becoming practically valueless, it was necessary for us to acquire the fresh territory that was needed, before the Germans seized it themselves." In the same way they had to protect themselves against French incursions, the French having since 1884 added enormous tracts in the Western Soudan, towards the Guinea coast, the French Congo and the Sahara, although, except in the neighborhood of the gold coast, they did not come so much in contact with the English as the Germans in East and Southwest Africa.

The question, "supposing that we have prevented the Germans obtaining tracts of country that they desired, can any blame attach to us?" is seriously put forward as a reply to alleged German complaint at British colonial aggressiveness in Africa. It is added that England having been "the one great successful colonizing power" for four or five centuries, it is "foolishness to suppose that we are going to surrender the fruits of our labors because continental nations have begun to think there is something in a colonial policy;" and "we made no fuss when France annexed Madagascar."

It is interesting to note this warming controversy, based on conflicting efforts at colonizing by England, France and Germany. The London *Financial News* comment is: "Both French and Germans complain that we stand in the way of their colonial expansion, though it is only when they trench on ground in too close proximity to that which we have already taken up that we raise any objection. To blame us, however, for looking after our own interests is simply ridiculous, especially on the part of Germany, who, having no interests whatever on the African continent before 1884, has since then been grabbing all the territory she can get. We, on the contrary, have got the heritage of centuries to take care of, and we shall continue to do the best we can for the empire, in spite of German snarls."

THE BRAZILIAN CRISIS.

The finances of Brazil have, it appears, been going from bad to worse. Within a week exchange on London, or, rather, the gold premium, has reached the highest level on record, and, at the same time, advices from Rio have indicated that the political situation in the country is causing grave anxiety, and that business is naturally in a state of extreme depression. The crisis, for such it appears to be, has been aggravated by the political unrest, and there has been a discussion as to which of the various remedies usually resorted to by South American states in distress shall be adopted in this case. According to the latest European journals which discuss the subject or give information upon it derived from their correspondents on the ground, the present situation is the culmination of a period of inflation and governmental juggling with the finances of the country. Among other cheerful propositions was one for the adoption of a moratorium or general suspension of debts during a fixed period. This, it will be remembered, was the course pursued by the Argentine Republic when its difficulties culminated in 1890. It is stated, however, that the effects in the Argentine case have left such a bad impression Brazil is not anxious to follow it, as it would wipe out private as well as public credit in the country. Another plan is to increase the note circulation. This already amounts to 691,000,000 milreis, or, approximately, $387,500,000, of which 340,000,000 milreis are government notes. The paper currency has so depreciated in value that it commands only about one-third of its face value in gold, while among other suggestions is one that the government bonds deposited with the Treasury as security for bank circulation shall be transferred to another account and treated as security for the country's external debt. The fate of the Brazilian currency, either with or without such a curious piece of financial work, should there be any increase in its volume under existing circumstances, may be readily foreseen. In fact, the movement in exchange is sufficient indication of the way in which the position of the country is regarded in Europe. Where such crude notions of the method to alleviate financial distress hold sway, it is no matter for surprise that the credit of the government should fall to a low point, and that the trade and commerce of the country should suffer correspondingly. It may be presumed, of course, that the scheme of using the government obligations pledged for the redemption of the note circulation of the banks as additional security for foreign loans has for its ultimate object the contracting of fresh loans abroad. This, however, leaves out of sight two very important circumstances. In the first place, a country which juggles in this way with its obligations cannot expect to command any fresh credit, while the fact is apparent that Brazil's troubles are the result of inordinate borrowing in the past, and that an increase in the amount it owes abroad would be no more than a temporary alleviation. To judge from all accounts the Brazilian situation promises to become more acute, and a readjustment of its finances like that to which the holders of Argentine securities were subjected is the most likely outcome, London and Paris, which hold the bulk of the country's external debt, being the probable sufferers in the process.

WORKINGS OF RUSSIA'S FINANCIAL SYSTEM.

One of the reports in response to Secretary Olney's July circular regarding money and wages in foreign countries deals with the workings of the Russian financial system, which is, perhaps, less generally understood than that of any of the other important European nations. Minister Breckinridge, who has prepared the report, says that the standard has been for many years fluctuating paper measured externally in terms of gold. The per capita circulation is about $5. In circulation the government has 1,055,000,000 roubles: gold, 5,000,000; silver, 25,000,000, and subsidiary coin, silver and copper, 90,000,000 roubles. The coinage of silver on private account was stopped in 1893, and an extensive redemption scheme is about to be put into operation, to carry out which the government has accumulated a sum of gold about equal to 550,000,000 gold roubles. The paper rouble, now valued at 67 cents gold, will be redeemable in a special gold coin of the same value. Silver will be given a large field of employment, but its coinage will be upon the account of the government, and it will be kept at par with gold.

In reference to the relation of the existing currency to manufacturing industries and the rates of wages, he points out that manufacturers have long been stimulated by a protective tariff as well as by the ability of the manufacturers to pay their workmen approximately the old scale of wages in the cheaper money of the present system. Still the growth of manufactures, while considerable, has not been as marked as would be expected from these advantages, though in

lines most congenial to the people the growth has been great and the profits enormous. The non-excisable manufactures increased from 588,000,000 roubles in 1873 to 1,064,000,000 roubles in 1890. The excisable manufactures increased in the same period from 197,000,000 roubles to 403,000,000 roubles. Mining products grew from 120,000,000 to 189,000,000 roubles. Mr. Breckinridge sees no reason to question that this growth of manufactures still continues and that there must be a marked increase for a long time to come under the present policy.

It appears, however, that the workingmen have not participated appreciably in the benefits bestowed upon these industries. Not a word is heard favorable to the condition of agriculture; the universal testimony is of extreme depression, and the wages of the agricultural laborers have had in the main a downward tendency. As to factory wages, the minister, after submitting copious official tables, remarks that wages in Russia have undergone little or no change for thirty years, and there is no record of their being affected by the great changes in the purchasing power of the paper rouble—the medium of payment. It may be assumed that had Russian labor been organized as in the United States, it would have at least struggled to change the scale to correspond to the change in the value of money, but there has been no struggle and no change. Wages in England and America are respectively 124 and 379 per cent. higher than in Russia, and wages in Russia are still further reduced by fines imposed upon workingmen.

SILVER AND THE INDIAN SITUATION.

Our latest European exchanges fully confirm the impression that it is the unsatisfactory condition of Eastern trade in general and the threatened famine in India, with the consequent curtailment of that country's ability to absorb silver, that are the main factors in the recent fall in the market value of the metal. Neither the possibility that the party here which has adopted the free coinage of silver as its guiding principle will win the coming election, nor the other suggestion, that people who bought silver and silver securities on that possibility have become dissatisfied with the chances and have liquidated their holdings, appear to have had much tangible effect on the silver market. The case, as summed up by the leading authorities on silver in London, is that the Indian famine is the real cause for the recent downward movement of silver. It is pointed out that the crop failures in India are a most serious matter for silver. Money is rising in the marts of that country, and the conditions that confront it point to a great curtailment of its trade. Besides this the scarcity of food supplies, in this instance as in the past, would rather induce the native inhabitants to sell silver ornaments than to purchase new ones, thus cutting off one of the greatest outlets for the world's silver supply. In fact, it is urged that if the fears regarding the crops there are verified, the Indian demand for silver may disappear for a considerable time.

As regards China, too, the outlook is not calculated to support any bullish theories in connection with silver. Demands for the metal from that country have for a considerable time been practically non-existent. The balance of trade has been against the country, and the increase in its external debt, contracted on a gold basis in Europe, makes it necessary for China to provide an enormous sum for annual interest, which, unless the empire is opened up to foreign industrial development and its export trade greatly increased, would tend to maintain the unfavorable trade balance and decrease the probability of its being able to absorb silver on a large scale.

London financial journals, notably the *Statist* of that city, pay some attention to the speculative and other purchases for European account which rallied the price of silver a fortnight ago from 29¾d. per ounce to over 30d. This, it would seem, was due to the appearance of the small customary demands for subsidiary coinage purposes by some one of the continental governments. There was also, it seems, a certain amount of renewed speculative purchases, but the paper to which reference has just been made declares that "the opinion is growing that the silver party will be unsuccessful at the elections, and consequently that silver will receive no support from United States purchases." It adds, after surveying the facts already referred to above, that "a further serious fall in the price appears probable, unless, indeed, the American elections should bring the silver party to power."

Assuming that this conclusion of the *Statist* is borne out by the actual result at the polls next week, it would seem that the Indian situation will be the governing factor in the silver market. In this connection the review of India's trade for the year 1895–96 just issued by the Statistical Department of the Indian government contains some interesting data. Its author, Mr. J. E. O'Connor, presents some striking figures representing the course of silver prices and of India exchange in relation to each other since the closing of the India mints to the free coinage of silver, together with no less striking conclusions drawn therefrom. Under the new order of things important differences have been established. While the mints were open silver and the exchange value of the rupee ran almost parallel to each other, the price of silver being always a little above the rupee. Immediately after the mints were closed, in 1893, they took opposite directions, the price of silver dropping, while the rupee had a sharp advance. Rather rapid fluctuations followed, silver recovering from its first drop and then reacting again, while the value of the rupee in exchange did not hold its advance, though by 1895 an apparent equilibrium was established, the two important facts being that the rate of exchange is higher than the value of silver, and steadily maintains that position, while the difference between the two is enormously greater than it used to be. Mr. O'Connor, therefore, advances the conclusion that the closing of the Indian mints has materially altered the relative position of the rupee and of silver, and that since 1893 "a wide and apparently widening distance has been established between them, partly as a consequence of the closure and partly on account of the new duty on imported silver; that now the value of the rupee is determined by other factors than the price of silver, and that the rupee has become the dominant factor, and more or less determines the price of silver."

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

Mr. Henry Bradstreet, the junior partner in the firm of J. M. Bradstreet & Son, the founders and original proprietors of The Bradstreet Mercantile Agency, died in New York city very suddenly of pneumonia, on Saturday, October 24. The senior partner died in 1863, and from that time until the incorporation in May, 1876, Mr. Henry Bradstreet had the administration of the business, and became the first president of the company, but resigned his position in August of the same year, since which time he has not been engaged in active business. He was a bachelor, and lived for many years at one of the fashionable hotels of the city, and established a wide acquaintance and made many friends by his high social qualities. Mrs. F. S. Hoffman, his sister, is the sole survivor of the firm whose name is perpetuated by the title of this journal.

In a special to the St. Louis *Globe-Democrat* Mr. Charles A. Conant says that the effect of machinery upon labor and production is the subject of an inquiry now going on by the Department of Labor which is likely to throw light on some of the great changes in prices and wages in recent years. The results of the inquiry will not be completed until after the presidential election, and the method pursued by Commissioner Wright relates rather to the comparative effects of machinery in particular industries than to its aggregate results. It will be possible, however, from these inquiries to determine in some degree the influence which machinery has had upon the prices of manufactured goods, and to compare the results of this influence with those attributed by the opponents of the gold standard to the diminished coinage of silver in the more highly civilized countries. The development of the use of machinery within the past generation is exaggerated in a few quarters, but is given less than its proper weight by those who seek the causes for changes in prices purely in monetary laws. It is only by attention to the effect of machinery in cheapening production that the seeming paradox can be explained, that steadily-falling prices have been accompanied by steadily-rising wages. Labor has thus enjoyed a double gain, by the increase of the purchasing power of the dollar in which it has been paid at the same time that the number of dollars paid has grown greater.

Recent happenings have given a certain amount of interest to the report on the finances of Spain, which has just been received at the State Department in reply to the July circular requesting information regarding money and wages in foreign countries. The report, which is made by Mr. Armstrong, the chargé of the legation at Madrid, says that in Spain the bimetallic system prevails in theory, the Bank of Spain, which is a copy of the Bank of France, holding one-half of its cash reserve for the payment of its notes in gold and the other half in silver, yet of gold in actual circulation there is none. The per capita circulation is $23.75, of which $11.32 is based on metallic coinage. Mr. Armstrong says: "Here, in other words, the fact has been demonstrated that, as in the physical world, two bodies cannot occupy the same space in the same time, so, in the monetary world, the two metals cannot cover the same complicated field at the same time, both filling the place of a basis of value."

CURRENT BUSINESS NEWS.

Industrial.

A Peoria, Ill., dispatch says that preparations are making to start the distilleries of the American Spirits Manufacturing Company.

The twenty-fourth annual convention of American Gas Light Association began its sessions in St. Louis this week.

The Chattanooga *Times* says: "The demand for pig iron continues active, some speculative buying being noted in Bessemer pig. The market for finished material is not strong, and low prices are being made in nearly all lines, where the orders are for prompt delivery."

The Methuen Company was to resume operations in all departments, except weaving, at Methuen, Mass., this week. About four hundred operatives, who have been idle four months, will be given employment.

Among the sales of pig iron last week by the Tennessee Coal, Iron & Railroad Company were 10,000 tons to go to England, via Brunswick, Ga. The sale brought $27,000, which "was as satisfactory as could have been gotten in this country at this time."

An Athens, Ohio, dispatch says that all the coal miners in that district have gone to work at the 45 cent rate, with the expectation that the rate will soon be restored to 61 cents.

The Edgar Thomson Steel Works, at Braddock, Pa., which have been shut down for ten days, resumed in all departments on Thursday, giving employment to 2,000 men.

Commercial.

The New York correspondent of the Philadelphia *Ledger* justly remarks: "The outlook for business, at this time, resembles in a remarkable degree that which existed in 1878. In that year the Resumption act was passed, and in the following January it went into effect. This placed the country securely on a gold basis, and was followed by an extraordinary revival of trade."

So much have current sales of bar iron decreased that the Western Bar Association offers "a rebate of $3 per ton to buyers before November 6."

The firm of Harper & Brothers, of New York, publishers, has been incorporated with a capital of $2,000,000.

The United States commissioners to the Brussels International Exposition of 1897, acting under the direction of the State Department, have completed their plans for American participation in the affair, and have appealed to manufacturers and producers to seize the opportunity for introducing their products in foreign markets. Professor J. H. Gore, of the Columbian University, of Washington, appointed to the head of the commission by Secretary Olney, was the United States commissioner-general at the Antwerp and Amsterdam Exhibition, as well as secretary of awards at Atlanta, and his wide experience is expected to make the American section at Brussels next summer creditable to the nation. The other member, Professor Thomas Wilson, of the Smithsonian Institution, will have especial charge of the United States national display. Applications for space will be received until January 1, and exhibits must be in place by April 15.

The Cincinnati *Price Current's* investigations confirm its estimates of a crop of 450,000,000 bushels. "There was talk of lighter northwestern receipts, but they were really heavier than last year."

Millers, dealers, speculators and others "concede the bakers must advance the price of bread in most European cities, where stocks in second and third parties' hands are reported very small, with production reduced to minimum after about four years' decreasing supplies." It is possible, Messrs. Clapp & Co. say, that "requirements may become more urgent, and sentiment lead the consumer and his agents to become more aggressive buyers, and lead an advance that may curtail consumption and increase production and continue for several years, and carry prices back to those prevailing four or five years ago. Europeans generally seem willing and expecting to pay higher prices."

Secretary of Agriculture Morton estimates the gain to the farmers of the country by the rise in wheat, up to October 21, at $28,688,000 over and above what they would have received at the prices ruling on September 1. He adds that after a careful canvass of the situation it is found that not less than 45 per cent. of this year's crop is still in the farmers' hands.

The steamship Algoa, which sailed on Monday from Galveston, Tex., for Liverpool, took what is declared to be "the largest cargo ever shipped from an American port. It consisted of 18,260 bales of cotton, 104,000 bushels of grain, and 640 tons of other freight, making the bulk of 24,000 bales of cotton. The value of the cargo was about $1,000,000, and the freight paid was over $70,000."

The extraordinary demand for flags threatens a flag famine in New York city. Dealers say that they have never experienced such a sale as they are having, "and it is estimated that at least 500,000 large flags will be displayed to-day."

The *Iron Age* says: "The low prices for tinplate, due to the fight between steel works in and out of the pool, have led to an invasion on the part of American mills of the Pacific coast markets, which were supposed to be sacred ground for the Welsh works. Considerable blocks of tinplate have started around the Horn, and others are to follow."

Prince Hilkoff, the Russian Minister of Ways and Communication, before sailing for home last week, is said by the *Iron Age* to have "placed an order for 18,000 American railroad watches for the use of the employees of the Russian railroads."

A Montreal dispatch to the *Evening Post* says: "The grain standards from the northwest have arrived at Kingston, and the grain buyers are very angry because they are lower than last year. They say the reduction will cause trouble, and the millers will be sufferers. No. 1 hard this year is considered inferior to No. 2 last year. They denounce the action of the Dominion government in placing farmers on the Board of Grain Inspectors, and contend that they lowered the standards to benefit the farmers at the expense of the grain dealers and millers."

Financial.

The following securities were sold at auction this week at New York:

16	Five per cent. first mortgage bonds, $1,000 each, of the Roanoke Machine Works, dated February 1, 1883, due February 1, 1933. Coupons due August 1, 1893, and subsequent thereto atta hed (hypothecated)	$430 per bond
9	Five per cent. first mortgage bonds, $1,000 each, of the Roanoke Machine Works, dated February 1, 1883, due February 1, 1933. Coupons due February 1, 1895, and subsequent thereto attached (hypothecated)	$430 per bond
230	Five per cent. first mortgage bonds, $1,000 each, of the Roanoke Machine Works, dated February 1, 1883, due February 1, 1933. Coupons due February 1, 1895, and subsequent thereto attached	$450 per bond
1,532	Shares Old Dominion Steamship Co., $100 each	70%
3	Bonds of The International Okonite Co., Limited, £100 each, due 1910	$200

$20,000	St. Louis, Avoyelles & Southwestern Railway Co. first mortgage 5 per cent. sinking fund gold bonds, due 1925, with coupons due April 1, 1896	$10
$20,000	McGregor Empire Compress Co. 6 per cent. coupon bonds. July, 1806, coupons attached.	$10
20	Shares United States Trust Co	1040-1042
200	Shares New York Biscuit Co	54
100	Shares Diamond Match Co	121
330	Shares Diamond Match Co	126
$360,000	The Middle Tennessee & Alabama Railway Co. second mortgage bonds	$6,000
$650	The Middle Tennessee & Alabama Railway Co. second mortgage bond scrip	$6,000
1,803.25	Shares The Middle Tennessee & Alabama Railway Co	$6,000
$5,500	Bodine Glass Manufacturing Co. first mortgage 6 per cent. gold bonds	$100 per bond

The Rome, Watertown & Ogdensburg Railroad Company has declared a quarterly dividend of 1¼ per cent., payable November 16.

The United States Express Company has declared a dividend of 1½ per cent., payable November 16.

The Chicago Packing & Provision Company has declared quarterly dividends of 4 per cent. on the common and preferred stocks, payable November 2.

Notice is given that pursuant to a resolution of the board of directors of the St. Paul & Northern Pacific Railway Company, adopted at a meeting held in St. Paul on September 15, a special meeting of the stockholders of the company will be held in St. Paul on November 20, and that the business to be transacted will be to pass on a proposed sale of all the railway land grant and other property to the Northern Pacific Railroad.

The Philadelphia *Press* says: "In all $70,988,928 of gold has been shipped to this country from Europe and Australia, and $61,200,000 have been received, including Saturday's receipts, leaving $10,000,000 to come. Of the sums received, only about $21,000,000 can be traced in the Treasury and the banks. This leaves $40,000,000 which has disappeared so far as the ordinary places of deposit are concerned.

Railroads.

At the first meeting of the newly elected board of directors of the Northern Pacific Railway Company, held this day in New York city, for the purpose of organization, the following officers were elected: Chairman of the board of directors, Edward D. Adams, New York; president, Edwin W. Winter, St. Paul, Minn.; vice-president, George C. Gorham, Washington, D. C.; comptroller, John Scott, St. Paul; secretary, Charles F. Coaney, New York; assistant secretary, George H. Earl, St. Paul; treasurer, Albert E. Little, New York; assistant treasurer, C. A. Clark, St. Paul; general counsel in New York, Francis Lynde Stetson, New York, and general counsel in St. Paul, C. W. Bunn, St. Paul. The board of directors, elected at the recent meeting of the stockholders, is composed as follows: Edward D. Adams, C. H. Coster, Charlemagne Tower, Jr., Robert M. Gallaway, Eben B. Thomas, Robert Bacon, D. Willis James, Edwin W. Winter, Francis Lynde Stetson, Samuel Spencer, Dumont Clarke, Brayton Ives, James Stillman, Walter G. Oakman.

The following gross and net earnings returns for September and the nine months' period are reported:

According to a Baltimore dispatch, the consummation of the deal for the transfer of the control of the Seaboard Air Line has been postponed until after election day.

The Wagner Palace Sleeping Car Company put into effect a new rule which "provides that no passenger shall carry any more baggage than will go under the berth without sticking out into the aisle when it is made up at night."

Representatives of railroads and the steamship companies have been in conference at New York in relation to the immigrant traffic, and it is announced they will coöperate in handling business. The "middlemen," who have so long sold tickets on commission, "will be done away with, and the traffic will be equally divided between the interested lines. The new arrangement will go into effect January 1."

The freight-car famine is reported to be of serious proportions in many parts of the west. All the leading grain roads are short of cars to an extent scarcely ever before experienced.

The *Iron Age* publishes a report "that a deal is on the point of consummation whereby the Underground Railway of London, England, with all its property, is to pass into the hands of the street railway capitalists of New York, Philadelphia, St. Louis and Toronto, Canada. Sir William McKenzie, of Toronto, is said to be the head of a new syndicate formed for the purpose."

The Mexican Railway Managers' Traffic Association has been reorganized, and a new schedule of rates is to be arranged and adopted shortly. Competition has been keen since the old pooling arrangement among the Mexican roads was dropped in June, 1895.

Mr. Harry Pollitt, chief engineer of the Manchester, Sheffield & Lincolnshire Railway, has returned to England after an inspection of American railways. Before leaving he said: "The feature of your railroads is vastness as compared with compactness in ours. The ability of your managers to arrive at certain results by short cuts would not be recognized by our officials, but it is almost necessary when the extent of your systems is taken into consideration. These remarks, however, do not apply to the Pennsylvania and New York Central railroads, which, without wishing to discriminate, I consider far superior to your other roads. I was particularly impressed with the thoroughness and nicety of detail of the Pennsylvania system, and surprised how closely our methods have been copied, and in certain respects improved upon."

The extensive new docks and port facilities of the Illinois Central Railroad, at New Orleans, were to be dedicated with imposing ceremonies this week.

The sale of the Jacksonville, Tampa & Key West Railway, advertised to take place next Monday, has been postponed until the first Monday in March, 1897, by order of Judge J. W. Locke, of the United States Court.

Miscellaneous.

The Treasury Department has received 516 Columbian World's Fair medals and diplomas, awarded to exhibitors in the United States, "which have been returned by the Post Office Department because the parties to whom they were sent cannot be found."

The trustees of the New York and Brooklyn Bridge have provided for a pneumatic mail tube to connect the New York and Brooklyn post offices, which, it is said, will save from one to two hours in the delivery of mail matter. Two 8-inch tubes are to be laid between the two post offices, at a cost of about $140,000 for the plant, which will be built by the New York Mail & Newspaper Transportation Company and rented by the government for $14,000 a year. The work is to be completed by March 1.

Foreign.

The London *Mark Lane Express* says: "The rise in the price of wheat is justified by the situation. It is not a speculative advance; on the contrary, a speculative effort to bear the market is on foot. The English wheat crop did not exceed 7,250,000 quarters, though it is stated that it reached 9,000,000. Let the farmers wait."

The price of bread at London has gone up ½d., "and the increase is being acutely felt in the poorer districts at London."

The Russian wheat shortage is now estimated at London at 80,000,000 bushels.

The total sealing catch this year, as reported to the Canadian Department of Fisheries, was 37,324, of which 17,425 were males and 19,899 females.

The annual financial statement of the Dominion of Canada for the year ending June 30, 1896, "shows a deficit for the year of $363,481, and an increase in public debt of $5,528,831. The net public debt now aggregates $258,528,304."

A Pekin dispatch says: "An American syndicate will advance 30,000,000 taels for the construction of the Hankow-Pekin Railroad. The line will be 700 miles long, and will cross twenty-seven rivers, including the Whang-Ho, all of which will have to be bridged. The entire works will be transferred to the syndicate, but the shares of the company will ostensibly be held by China."

The London *Times* says: "There are now twenty large bicycle factories in Austria, whose annual output is estimated at about 25,000 to 30,000 machines. The importation of foreign machines has greatly declined, but many small manufacturers still procure unfinished parts of the machines from other countries, and notably from England."

Cablegrams from Bombay "say that the drought continues, with no signs of abatement, and that the crop situation in India is daily becoming more serious."

Work has begun on a new iron furnace plant at Trieste, Austria. The plans look to the building of two furnaces, but only one has thus far been started. The idea is to import English coal, coke the screenings, and sell the lump. Algerian and Spanish ores are to be used. Foundry irons will be produced to crowd out the English brands, the total imports into Austria in 1895 having been 117,000 tons. The duty is about $3 25 per ton.

It is reported that Emperor William has notified leading German steamship lines that all steamships owned by companies in receipt of state subsidies must be constructed in German shipyards.

An international exhibition of gas motors and gas heating and illuminating apparatus has been organized at Gouda, Holland.

United States Consul Hurst, at Prague, reports to the State Department that the Austrian government is about to treble the duty on glucose to effectually bar out the better and cheaper article from America. Within five months the United States shipped 2,640,000 pounds of this commodity into Austria, paying a duty of $2.90 for every 220 pounds.

The London *Chronicle* says there is reason to believe that a solution of the Venezuelan dispute will be found in the appointment of a tribunal similar to the Behring sea tribunal of arbitration, in which case Sir Richard Webster, Attorney-General, will represent Great Britain, as he did before the Behring sea tribunal.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Partner—Confession of Judgment.

The Supreme Court of Indiana held, in the recent case of The Davenport Mills Company vs. Chamberlain, that a partner has no general authority by reason of that relation to confess judgment against the other partners in his firm; that a judgment rendered by confession of one partner without summons or notice to the other partner is void as to the one not notified, and that its collection may be enjoined.

Wages—Creditors—Fireman.

The Supreme Court of Minnesota held, in the recent case of The Sandwich Manufacturing Company vs. Krake, that the creditors of a fireman could not by proceedings supplementary to execution reach the wages due him from a municipal corporation for services as such fireman, it being against public policy to permit such legal proceedings to intervene so as to prevent the payment to the fireman himself the wages due him for services so rendered.

Court of Claims—Jurisdiction.

In the case of The United States vs. Gilliat, Adm'r, the Supreme Court at Washington dismissed an appeal of the government from a judgment of the Court of Claims in favor of the appellee upon a French spoliation claim, holding that Congress clearly intended that the decision of the Court of Claims in these cases should be final and that the Secretary of the Treasury should pay upon receipt of the certificate provided for in the act referring those claims to that court.

Accident—Railway—Infant—Guardian.

The Supreme Court of Indiana held, in the recent case of The Cleveland, Cincinnati, Chicago & St. Louis Railway Company vs. Moneyhun, that the guardian of an infant that has received a personal injury as a result of the wrongful act of another may sue and recover from the wrongdoer whatever damages might be recovered by the infant suing by his next friend; that where the jury found that, at the time he was injured, the plaintiff was standing on the steps of a railroad car while it was running twenty-five miles an hour, that this was not a safe place to stand, and that there was room for him to stand in a safe place inside the car, the judgment should be for the defendant even though they also found that the defendant failed to furnish plaintiff with a seat, that he went out on the steps because he experienced nausea, and that the engineer negligently caused the car to jerk while he was standing there.

Corporation—Stockholders' Dividends.

The Kentucky Court of Appeals held, in the recent case of Grant vs. Ross et al., that dividends declared by the directors of a corporation and received by the stockholders may be reclaimed by the directors if illegally declared under a misapprehension of the right to declare them, or under the belief that there were profits when there were none; that if there be an assignment by the corporation for the benefit of creditors, such right to reclaim dividends improperly declared and paid passes to the assignee if the terms of the assignment are sufficiently cumprehensive to embrace them, as they were in this case, the right of reclamation against any and all stockholders being expressly given to the assignee; that the fact that the stockholders authorized and directed the board to make the payment does not alter the rule; that the stockholder cannot do a wrong even by mistake and take advantage of it, and that, moreover, it is the business of the board of directors alone and not of the stockholders to declare dividends, and therefore the resolution of the stockholders was to no purpose.

Usury—Action—Evidence.

The Kentucky Court of Appeals held, in the recent case of Anderson vs. Trimble, that in an action in which the plaintiff sought to recover the amount paid by her in satisfaction of a judgment rendered against her in favor of a bank upon a negotiable note which she had executed to defendant, and which he had discounted to the bank, the ground upon which recovery was sought being that the note upon which that judgment was rendered was usurious, the fact that in the action in which that judgment was rendered the plaintiff was denied the right to recover rgainst the defendant the usury she sought to recover because no such cause of action was set up in her cross-petition, and also it seems because she had not then paid the usury, although judgment was rendered against her for it, did not make that judgment a bar to action, and that plaintiff was entitled to recover the usury thus paid, as the record in the former suit showed the existence of the usury, if indeed the opinion expressed by the Superior Court upon appeal in that case that the note was usurious was not conclusive upon the parties, but that plaintiff was not entitled to recover the cost included in the judgment in favor of the bank, as it was her legal duty to pay the note to the bank without cost.

Insurance—Application—Waiver.

In the case of Geare et al. vs. The United States Life Insurance Company, recently decided by the Supreme Court of Minnesota, it appeared that the application of the insured for a policy of life insurance (made a part of the contract of insurance) among numerous other questions and answers as to the health, habits and history of the insured contained the following: "'Does the person expressly waive all provisions of law forbidding any physician or surgeon from disclosing any information which he has acquired? Answer. Yes.' "The policy having lapsed by reason of the non-payment of a premium it was subsequently reinstated upon the faith of the following certificate of the insured and the beneficiaries, but the language of which was prepared by the insurer: "'In consideration of the restoration and renewal of policy No. —— the undersigned hereby renews, reaffirms and warrants each of the statements, answers and representations as expressed in the original application for said policy, and doth further warrant that the person whose life was desired to be insured under said policy has been and continued since the time of said original application and now is of good health and correct, sober and temperate habits.'" The court held that the waiver in the original application did not include information thereafter acquired by a physician in attending the insured as a patient; that the effect of the reinstatement of the policy upon the certificate was merely to revive the original policy as it existed before the lapse, modified only by the representation as to the health and habits of the insured subsequent to the original application, and that hence the waiver did not extend to information acquired by an attending physician prior to the date of the renewal certificate, but subsequent to the date of the original application.

Elevated Road—Nuisance—Injunction.

In the case of Doane vs. Lake Street Elevated Railroad Company, lately decided by the Supreme Court of Illinois, and reported in the Chicago *Legal News*, the case being brought by an abutting property owner to restrain the appellee from building an elevated street railroad in Lake street in the city of Chicago, the court held that while the streets were held in trust for the public use and could only be appropriated for the purposes for which they were dedicated, it was the settled law of the state that permitting street railroads to be placed therein was not subjecting them to an unlawful use, that it had often been so decided as to surface roads, and no good reason had been suggested, and none could be offered, for making a distinction in this regard between elevated and surface roads, and that the road in question, if constructed in conformity with the requirements of the ordinance, would obstruct travel upon the street by other means less, and be less hazardous to the public, than would be a surface road. The court further held that the real ground upon which relief by injunction is denied in such cases is, that the use of the street being within the purpose for which it is laid out, and, therefore, a proper use, the right to occupy is properly a question between the defendant and the municipality having the control of its streets and charged with the duty of keeping them free from unlawful obstructions, or between the defendant and the public generally, the individual being left to his action at law for damages for any injury resulting to his property from threatened injury; that the individual property owner has no standing in equity on account of public injury, or for the purpose of inflicting punishment on the defendant for its wrongful acts, but can only invoke that jurisdiction in order to protect his property from threatened injury; that his injury is a depreciation of the property, which is capable of being estimated in money aad recoverable in an action at law, therefore a court of equity will not interfere by injunction; that if a railroad is legally authorized no one can enjoin its construction; in other words, it is only when the consent of the city has not been lawfully obtained that anyone can complain in a court of equity, and, therefore, it is said, "the remedy is by the public authorities, the abutting property holder being remitted to his action at law for damages," and that the defendant, if sued for resulting injury, would not be heard to say the road was a nuisance or built in violation of law.

BUSINESS NOTES.

Alleged German Sugar Ring.

A Berlin cable dispatch says: "It is reported that a sugar ring is in process of formation, whose membership will consist of 400 German sugar manufacturers. This organization proposes to establish a central point for the sale of the products of German sugar manufacturers, and negotiations are in progress with a view of connecting the organization with the Austrian and Russian sugar trusts. The *Freisinnige Zeitung*, in an article announcing the proposed formation of this ring, characterizes the scheme as a gross outrage, having for its object the exploitation of consumers in an attempt to cement an oppressive German sugar monopoly. The scheme, the *Zeitung* says, must be suppressed at all hazards."

Canadian Emigration to Brazil.

The Rio de Janeiro correspondent of the London *Times* says: "The arrival of Canadian emigrants at Sao Paulo has caused a certain amount of scandal. They had been promised fictitious favors, such as one year's gratuitous support and other alluring advantages. Much dissatisfaction exists among them regarding the treatment which they have met with, as no provision was made before their arrival for receiving them. News has been received, however, to the effect that they are now meeting with better treatment at the hands of the government of Sao Paulo. Some families have accepted plantation contracts, but the majority will settle on the Dumont estates, which assures them good treatment under English managers."

High Wheat, High Flour.

In *Harper's Weekly* it is stated that "the records of the rise in wheat make pleasant reading. High wheat makes high flour, and that makes dear bread, but none seems to be thinking of that. The all but universal sentiment is satisfaction in any legitimate condition of the markets that will help the farmers. The farmer is on the mind of the American public to an oppressive degree. We all want him to make money, the only condition being that it shall be honest money. Dollar wheat would be immensely popular in the United States, and every skip that breadstuffs make towards the dollar mark is greeted with smiles and a disposition to cheer. Only the silver men are solemn. No doubt they are brooding over the inscrutability of the ways of Providence."

Bulgarian Sericulture.

The French consul at Rutschuck "says that the first cocoons of the 1896 yield have recently made their appearance on the market, the greater part white, but a considerable quantity also of yellow cocoons. The yield was about 42 kilograms of cocoons per ounce of seed. The yield is said to be a fair average one; that is to say, an exportation about equal to that of last year is anticipated. The total production of cocoons in Bulgaria was 3,600,000 kilograms in 1894, and 4,000,000 in 1895. The exports amounted to 91,992 kilograms in the former year, and 105,568 kilograms in the latter. Of the amount exported in 1895, 42,200 kilograms were consigned directly to France, 47,000 kilograms to Turkey, 11,000 kilograms to Austria, and the remainder to Italy. It should be observed that a part of the consignments to Turkey were intended to be finally shipped to France and Italy."

The Indian Cotton Industry.

From the annual statement prepared by the Bombay Millowners' Association some idea of the growth and magnitude of the Indian cotton industry may be gathered. On June 30 there were in Bombay 69 mills running, with 2,186,323 spindles and 21,335 looms, employing 78,455 operatives, and representing a paid-up capital of Rs.57,004,773. Two new mills with 24,296 spindles were in course of erection. In 1865 there were only 10 mills, with 249,984 spindles and 3,378 looms. In other parts of the Presidency of Bombay there are now 30 mills, with 587,806 spindles and 7,538 looms; employing 23,738 people, and representing a paid-up capital of Rs.19,513,277. The number of cotton mills in India outside Bombay Presidency is 47. The quantity of raw cotton consumed by the mills in the island of Bombay alone in the twelve months to June was 330,073,776 pounds, or, say, 147,354 tons.

Around the World in Thirty-three Days.

The *Engineering News*, New York, says: "Around the world in thirty-three days is the possible pace set by Prince Hilkoff, the Russian Imperial Minister of Ways and Communication, now officially studying American railway methods. To make the circuit in this time modern fast ships and railway trains are alone considered; but with these available on the routes specified he gives the time as follows: New York to Bremen, 7 days; Bremen to St. Petersburgh by rail, 1½ days; St. Petersburgh to Vladivostock, by rail at 30 miles per hour, 10 days; Vladivostock to San Francisco, via Hakodate straits, 10 days; San Francisco to New York, 4½ days. The present shortest time for circuiting the globe is given as follows: New York to Southampton, 6 days; Southampton to Brindisi, via Paris, 3½ days; Brindisi to Yokohama, via Suez, 42 days; Yokohama to San Francisco, 10 days, and San Francisco to New York, 4½ days, or 66 days in all."

The 1896 Apple Crop.

Throughout the chief apple-producing states, New England, New York and others, the crop of winter apples is very large, according to the report to the *American Agriculturist*, which places the aggregate yield at a little under 59,000,000 barrels for all of the United States, against 60,500,000 barrels in 1895, and 57,629,000 barrels two years ago. This paper says the crop in New England, New York, Michigan and parts of a few other states is simply phenomenal. New England and New York alone have over 16,000,000 barrels, against a little more than 7,000,000 barrels a year ago, while Michigan is harvesting the largest crop of fine fruit ever secured there. In contrast, the report covering the central-west shows that in many instances the crop will not supply home requirements. This is a decided change compared with a year ago. There is also a marked difference in the supply available for commercial distribution. Five New England states are credited with 8,500,000 barrels, against a scant 4,000,000 barrels in 1895 and 7,000,000 in 1894.

Hoarding of Gold.

The New York News Bureau reports: "All sorts of estimates are made of the money hoarded in this country, and some estimates are as high as $250,000,000 hoarded or withdrawn from use. The gold hoarding has been constant since the Bryan nomination, but the amount cannot be definitely determined. An idea, however, can be obtained from the amount of gold which has actually arrived since August 3 and the fluctuations in the Treasury net gold. For example: Over $52,000,000 gold has been received from abroad at New York and Boston since August 3, while the Treasury gold reserve is only $11,000,000 greater than it was on August 3; $41,000,000 of gold has certainly gone into hands other than the Treasury, plus whatever gold may have reached San Francisco and other ports than New York, Boston and San Francisco, and plus the gold production of the country in the same time. The gold which may have been withdrawn from banks, etc., for the same purpose cannot be even estimated. The figures would indicate that somewhere between $40,000,000 and $50,000,000 gold has been hoarded somewhere in this country in two and a half months. Some people estimate it at $100,000,000 since January 1."

What Our Farmers Should Produce.

The *American Agriculturist* says: "Imports of farm products during the past fiscal year amounted in value to nearly $350,000,000. About one-third of our imports are of farm products. Our exports of agricultural produce were $570,000,000. Thus it took nearly two-thirds of our farm exports to pay for our agricultural imports. This is all wrong. But the United States cannot expect to grow all of the agricultural produce it imports, especially the $84,000,000 worth of coffee, tea $13,000,000, feathers $2,000,000 and fibers $13,000,000 worth, and perhaps half of the $7,500,000 paid for imported liquors is for stuff that cannot or will not be produced in United States. But a liberal allowance for all these items foots up hardly $125,000,000. The other $225,000,000 the United States pays out for agricultural imports ought to be produced in this country, and most of it can be. Including a few manufactures of agricultural products the following tables gives the items for the last fiscal year of principal agricultural imports into United States that should be produced in this country:

	Quantity.	*Value.*		*Value.*
Bark, cords	44,000	$215,000	Animals	$3,253,000
Bristles, lbs	1,573,000	1,436,000	Breadstuffs	2,781,000
Licorice root, lbs	87,150,000	1,460,000	Fruits	17,000,000

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Business in staple lines is confined to immediate wants, interest in election absorbing attention. The volume of trade is smaller than a week ago, and will continue restricted until the results of the election are known. Advices from important distributing centers report that leading commercial and industrial houses take a hopeful view of the business outlook and expect an early revival of demand, based on the anticipated success of the sound-money issue.

The restricted distribution of merchandise for several weeks has begun to register itself in the bank clearings totals, the aggregate for which at all cities during the past six business days is $969,000,000, 7 per cent. less than last week, but 10 per cent. less than in the corresponding week one year ago, 7 per cent. less than in the last week of October in 1893, and 30 per cent. less than in the corresponding week in 1892, when the total was exceptionally large. In some instances higher rates for discounts have served to further contract business, but at Chicago there are reports of improved collections.

Conservative views as to the outcome of the election were supplemented in the stock market at New York this week by the restricted money market and the advances of call loan rates to as high as 50 to 100 per cent. Liquidation by holders inclined to wait until after election, with the absence of buying and the tendency of commission brokers to advise against speculating in the face of the election and tight money, caused general concessions in prices. On Friday, however, covering by professional shorts resulted in a decided improvement, the movement being based on increasing confidence in the political outcome and announcements that the banks would prevent serious disturbance on the score of money. Rates, however, continue firm. Americans are higher in London, where the greatest interest is manifested in our election. Foreign exchange holds firm at 4.84½ @4.84¾ in the face of high money rates on buying for investment. Silver has declined on the Indian famine.

Orders to an enormous amount have been placed with manufacturers, jobbers, commission houses and importers to be canceled in the event of the success of the free-silver cause. An encouraging feature is a further advance in the prices of leather, wool, Bessemer pig iron, wheat, Indian corn, lard, raw and refined sugar, and for crude and refined petroleum. Prices are practically unchanged for pork and coffee, but hides are a little weaker, and prices for oats, wheat flour, cotton and print cloths are lower. Only moderate orders have been placed for woolen goods for spring delivery, but manufacturers are disposed to buy some raw material.

Texas country merchants buy with extreme caution, and in Louisiana the advance in discount rates has rendered trade duller than it might otherwise have been. Wheat shipments from farmers' hands are heavier in Washington state, owing to higher prices, but in Oregon producers seem inclined to hold for still higher quotations. Pacific coast wheat exports continue to attract attention. San Francisco sent another cargo of wheat to Calcutta October 27, the third from that port, and Tacoma reports a steamer chartered there also to load with wheat for Calcutta. Mercantile failures throughout the United States have declined in number this week, the total being 246, against 292 last week, 299 in the week one year ago, 253 in the corresponding period two years ago, and as compared with 353 in the like week of 1893.

Total exports of wheat (flour included as wheat) from both coasts of the United States amount to 3,628,030 bushels this week, compared with 4,067,000 bushels last week, 2,743,000 bushels in the last week of October, 1895, 2,934,000 bushels in the like week of 1894, 2,860,000 bushels in 1893, and as contrasted with 3,714,000 bushels in the corresponding portion of 1892. Exports of Indian corn amount to 2,597,000 bushels this week, nearly 400,000 bushels less than last week, one-third more than in the corresponding week of 1895, fifteen times as much as in the corresponding portion of 1894, and three times as much as in like weeks of 1893 and 1892.

Trade is fairly active at Toronto, and there is an improved demand for winter goods. A quantity of fleece wool has been exported to the United States. Business is only moderately active at Montreal, but the tendency of prices is upward. There is a better demand for staple goods at Quebec City, and collections have improved. Business has been fair only at Halifax, but the tendency is toward improvement. The fish market is active, and exports of apples are heavy. Owing to the failure of the fishery, much destitution prevails on the Labrador coast. Protracted bad weather at Newfoundland interferes with the handling of fish. Total bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $20,563,000 this week, against $21,356,000 last week, and $22,476,000 in the week a year ago. There are 37 business failures reported from the Dominion of Canada this week, against 48 last week, and a like number in the week one year ago, but as compared with 46 two years ago.

FINANCIAL.

The Money Market.

This has been a week of tension in the loan market at New York, due to the approach of the election. Conservatism had become more rife in banking circles, and withdrawals of funds by out of town institutions and other depositors continued, while the tendency to hoard gold is indicated by the reduction of the Treasury gold reserve to $118,200,000, and the prompt absorption of $9,000,000 gold that arrived from Europe. The fact that the November interest disbursements have to be met on the day preceding the election made the preparations for them an additional disturbing factor. The situation has, however, been relieved by the action of some of the leading New York banks, which agreed to supply funds where necessary to prevent a positive scarcity prior to next Wednesday. The premium for spot gold has been about ¼ per cent., and calls on gold were quoted at 1 per cent., considerable business being done at these figures. Makers of commercial paper are holding back from the market in expectation of better terms next week, and there is no demand whatever, the quotations being purely nominal. Transactions in time money are also at a standstill. The quotation of 6 per cent., plus a commission, gives little idea of the state of the market, though early in the week some sixty-day loans are said to have been made on choice collateral at very stiff rates. Stock Exchange borrowing has all been thrown into the call loan market, and that, for reasons given above, was marked by restrictions of accommodations by banks and other lenders. From Monday to Wednesday the current quotations for bankers' balances were 6@12 per cent., with a constant hardening tendency, loans being generally called and increased margins exacted. On Thursday the situation developed decided stringency, the rate advancing from 10 per cent. at the beginning of the day to 40@50 per cent., and in the latter portion of the day many borrowers were obliged to pay as high as 100 per cent., or 6 per cent. plus ¼ per cent. commission. On Friday rates varied greatly, figures on the Stock Exchange being made all the way from 6 to 75 per cent., the bulk of the business being at 50 to 36 per cent., this representing the rate at which bank syndicate money came into the market, and is the equivalent of 6 per cent. plus ¼ per cent. commission, the loans not maturing till Monday. These supplies relieved the tension of the market, it being understood that the banks will maintain the same policy till the election is over.

The New York Banks.

The statement of averages issued by the Clearing House last Saturday was somewhat of an agreeable surprise. It would seem that the increases in cash holdings, loans and deposits were the result of conditions connected with the statement of the preceding week. Nevertheless, as there was a small increase of $650,000 in legal tenders instead of a heavy falling off that had been expected as the result of the withdrawal of gold from the Treasury on legal tenders obtained from the banks, it was regarded as a favorable statement. The decrease in loans was over $6,000,000, and that in deposits $5,200,000, the gain of $1,000,000 in specie being apparently a reflection of the receipts of gold from abroad during the week. As a result of the other changes, the surplus reserve increased over $3,000,000. The figures of the statement compare as follows with those of the preceding week:

	Oct. 17, '96.	Oct. 24, '96.	Changes.
Loans	$456,139,300	$450,119,500	Dec. $6,019,800
Specie	59,136,400	60,232,300	Inc. 1,095,900
Legal tenders	66,198,500	66,849,300	Inc. 650,800
Deposits	453,695,200	448,482,800	Dec. 5,212,400
Circulation	20,521,100	20,510,600	Dec. 10,500
Total reserve	125,334,900	127,081,600	Inc. 1,746,700
Reserve required	113,423,800	112,120,700	Dec. 1,303,100
Surplus reserve	11,911,100	14,960,900	Inc. 3,049,800

At the corresponding date last year the surplus reserve was $16,689,700, against $63,864,900 in 1894.

The Boston Banks.

	Oct. 24, '96.	Oct. 17, '96.	Changes.
Loans	$161,489,000	$160,739,000	Inc. $750,000
Circulation	10,302,000	10,411,000	Dec. 109,000
Deposits	97,822,000	98,046,000	Dec 224,000
Due from reserve agts	17,303,000	18,891,000	Dec. 1,588,000
Legal tenders	7,424,000	7,620,000	Dec. 196,000
Specie	9,788,000	9,292,000	Inc. 496,000
Surplus reserve	3,597,543	3,417,571	Inc. 179,972
